Meetings.

PROVINCIAL INSURANCE COMPANY.

The nineteenth annual general meeting of the shareholders of the Provincial Insurance Company, was held at their offices in this city, on the 11th August.

The following gentlemen were present: Hon. Malcolm Cameron, Hon. J. H. Cameron, W. J. MacDonnell, C. J. Campbell, A. M. Smith, H. S. Howland. John Duggan, T. C. Stephens, R. G. Barrett, G. Duggan, P. Paterson, James E. Ellis, A. Morrison, L. Moffatt. E. Goldsmith, H. Hartney, and J. McMurrich (representing the estate of John Reid).

The Hon. J. Hillyard Cameron, president, having taken the chair, the report of the Directors, as follows, was read :—

REPORT.

The statement of the affairs of the Company, in accordance with the Act of Incorporation, for the year ending June 30, 1868, is herewith submitted.

Statement of affairs for the year ending 30th June, 1868.

Capital subscribed		$470,760 00
" called in		89,738 00
Amount insured during the year ending 30th June, 1868 :		
Fire	5,866,583 00	
Marine	3,023,953 00	
Premiums received during the year ending 30th June, 1866 :		
Fire	98,966 66	
Marine	100,366 16	
Amount paid for losses on risks of the year :		
Fire	40,201 35	
Marine	59,543 18	
Amount liable to be paid for losses on risks of the year:		
Fire	12,229 41	
Marine	7,605 11	
Amount paid for losses of previous years :		
Fire	6,691 59	
Marine	13,439 83	
Funds and property.		
Balance at agencies		$35,665 01
Cash in Bank and Treasurer's hands		11,878 30
Debentures and Stock		5,250 00
Real estate		21.448 01
Personal property		860 07
Sundry debtors		40,013 24
Salvage claims and unpaid stock		19,425 75
Bills receivable		47,499 28
		$182,039 66
Less all unpaid liabilities		51,251 12
Balance in favor of the company		$130 788 54

The annual balance sheet and the account of income and expenditure, with explanatory schedules, together with the auditors' report thereon, are also submitted.

The income from premiums (less re-insurances), and from other sources, amounting during the year to		$197,329 12
The total losses in Marine and Fire Insurance	$119,579 05	
The ordinary expenses for the year	24,553 36	
The commission to agents	17,646 86	
Together		161,779 27
Deduct from the above receipts show a net profit of		$35,549 85

Your Directors have again the pleasure of congratulating you on the result of the year's transactions. The business of the company has greatly increased, and shows the receipt of $44,735.98 in excess of the premiums obtained last year. A further reduction of capital has been made by the cancelling of three hundred and seventy-one shares. Your Directors beg to report the very satisfactory position of the agencies at Halifax and St. John, New Brunswick, both of which have lately been visited and inspected by the president of the Company. By the provisions of the Act of the last session of Parliament, Canadian proprietory insurance companies are requested to invest the sum of $50,000 in Dominion stock in three annual instalments. Although, according to the Statute, no instalment could be demanded by the Government until the 1st August 1869, the company, in common with the other Canadian companies, made the deposit of the first instalment of $16,666.67 on the 1st inst. Your Directors congratulate the shareholders on the satisfactory financial condition of the company, and the continued steady and successful progress of its business ; and they have much pleasure in declaring a dividend of three per cent. for the past twelve months, out of the very handsome profit realized on the year's transactions. This dividend will be payable on the 20th inst., to which period the stock books of the Company will be closed.

The report was adopted. The thanks of the shareholders were then voted to the manager, officers, and agents of the company, for their exertions during the past year.

Messrs. J. Duggan and R. G. Barrett were appointed scrutineers and were voted $5 each for their services. The sum of $1,000 was also voted to the president for his services for the year. The meeting then adjourned.

The following gentlemen were elected Directors for the current year, viz :—Hon. J. Hillyard Cameron, C. J. Campbell, Esq., Angus Morrison, Esq., Hon. Malcolm Cameron, A. T. Fulton, Esq., A. R. McMaster, Esq., H. S. Howland, Esq., George Duggan, Esq., Lewis Moffatt, Esq., W. J. MacDonnell, Esq., and John Worthington, Esq.

The board of Directors, on the following day, elected the Hon. J. Hillyard Cameron president, and Lewis Moffatt, Esq., vice-president of the company.

BROCKVILLE AND OTTAWA RAILWAY COMPANY.

The general meeting of the stockholders and bondholders of the Brockville and Ottawa Railway took place on August 12th, at 12 noon, at the company's office. We are sorry more were not present at the meeting, and particularly sorry to notice the absence of Mr. R. F. Steele, who worked so hard for the organization and completion of the road. Those who were present, however, seem to have undoubted confidence in the management, and probably this confidence may be the reason why so few took the trouble of coming.

The report of the manager, Mr. Henry Abbott, was submitted to the meeting, and from it we gather the details following :—

The receipts from the 1st January, 1868, to the 1st July, 1868, inclusive, amounted to	$73,348 71
Same period last year	52,598 63
Increase in six months	$20,750 08
The working expenses proper amount to	98,950 05
(Or 51 1-10 per cent. of the income)	
The whole expenses of operating the road, including all actual renewals, amount to	$46,087 55
(Or 62 8-10 per cent of receipts.)	

A result which has not been previously accomplished on this road, and which compares favorably with operations on any other railway in the Dominion.

This portion of the report is very satisfactory it shows a development in the country which few parts of Canada can boast, for those lines of railway are very few in this country whose "*traffic receipts*" increases in six months $20,000 or at the rate of 40,000 per year. Of course, this statement has reference to railways of the same length. While, therefore, we congratulate the company on the increased traffic, we propose now to look into the sources of Revenue.

The transportation of lumber is one of the chief sources, while the cattle, butter and pork, and the passengers formally make up the rest. Now, however, we have to notice a new source of income as mentioned in the report as follows :— "Iron ore which appears for the first time in the report is destined to form one of the chief sources of revenue." This iron ore is brought from the neighborhood of Perth and from Arnprior, the largest quantity coming from Arnprior. It consists of Red Hematite of good quality and will doubtless be a source of wealth to the present proprietors.

We wish now to notice the operating expenses. Last year the operating expenses were $28,974 63
For the first six months this year, they are 38 950 05

This increase in the operating expenses is chiefly due to the fact of a purchase of large quantities of fuel—there remaining at present on hand, 5,299½ —$6,392 23, and to some other small amounts, which by reference to the report will more fully appear.

We also wish to call the attention of those interested to the small amounts of renewals.

Bridge at Smith's Falls	$1,768 57
Bridge covering at Arprior	198 92
Ties	5,170 01
Re-organization	3,610 83
	$10,748 33
Renewals last year	38,375 28

If for the balance of the year only, as much more for renewals is calculated, the whole expenses this year would amount to nearly $18,000 less than last year.

It is proposed by the manager to build a new iron girder bridge at Carlton Place, as one of this year's renewals, and a turntable at Perth, which, it is expected, will be all the renewals necessary. Why these "repairs" should be called "renewals" and charged in a separate account we are not aware, unless it be to make the "operating expenses" smaller.

We also notice this statement : "Operating expenses 53 1-10 per cent for this half year, against 54 7-10 last year the difference being 1 6-10 in favor of this year's operations." We do not understand this statement, or rather we think there may be a little inconsistency, inasmuch as Mr. C. F. Fraser, who acted as Secretary-Treasurer to the Company last year, stated in a letter to the Board of Directors as follows : "The gross receipts in cash for the year 1867 were $146,209.39. The per centage for operating expenses has been in the proportion of 48.11 per cent of such gross receipts." Mr. Abbott in his reports says there were in proportion of 54 7-10. We think this arises from the renewals not being taken into consideration last year.

Cash on hand 1st of July is $24,479.02. Number of miles run to one cord of wood in 1867, 44.49; 1868, 45.45.

Speaking of "renewals" and operating expenses the report says :—

"It will be borne in mind also that the cost of all renewals of wheels, &c., to cars or engines were last year charged as "renewals," while this year they are included in operating expenses, thereby causing the article "wages" and "materials" to cars and engines to appear larger in this than in last year's statement. This also accounts for the increase in the cost of locomotive power per mile run."

It is with much satisfaction that we lay down this report of the Brockville and Ottawa Railway. We think so far as we could gather, that the Company has been well managed for the last half year, and that the road has been properly conducted in every department, and we congratulate Mr. Abcott and the public, the former for having been so efficient, and the latter for having such a courteous gentlemen to deal with.

We have heard of no complaints except, perhaps, the rate of freights for iron ore, and so far as the employees are concerned all are highly pleased.

We close with the hope that the road will always be conducted as well, with the wish that more would attend the meetings and hear the report read, and with the desire that some person well qualified would write a book called "The Art of reading and understanding Railway Bank and other reports."

Royal Insurance Company.—The annual meeting of the Royal Insurance Company was held yesterday, the results disclosed being very satisfactory. The fire premiums received in 1867 were £460,553, against £447,271 in 1866. The fire claims incurred in 1867 were £292,125, or about 63 per cent. The result is a profit on the year of £56,373, after paying all losses and expenses; and it is announced that the lapsed months of the current year permit still more favorable results. In the Life branch it appears that the recent decision of the company to increase the members' share of profits has produced a considerable effect on the business. The average annual amoulht of new life business for the last three years has been £801,000, against £688,000 in the preceding quinquennium, and in addition to this, the annual average amount declined on lives considered to be ineligible was £213,000. The company declared its usual dividend of 7s. per share, carrying forward a considerable addition to the reserve fund.

Canada Central Railway.—At a late meeting of the Shareholders of this company the following officers were elected:—John G. Richardson, President; H. Habbott, Vice-President; and Messrs. Scott, Powell, Ashworth, Lowe and Rivers, Directors. It is intended by means of this road to greatly facilitate communication between the west and Ottawa. At present the road will be built from Oitawa to Carleton Place, and ultimately to make it connect Montreal with the Georgian Bay. The first sod has been turned, and a good sum paid on a station in the city of Ottawa.

Insurance.

MONTREAL.

(From our own Correspondent.)

Montreal, August 18, 1868.

There has been a lull in fires this week, and our fire marshals have a respite in their arduous duties; you will see by the papers that Messrs. A. Savage & Son have again been unfortunate. This is their third fire in twelve months. Th report of the oil works being burnt down is incor rect. The fire was in an old wooden buildin, near Point St. Charles, used for making fuller soap out of refuse from the large works in St Maurice Street. The whole plant, stock and al was not worth over $2,400 and they are insure in the Royal for $1,200, the total loss will not b over $1,000, and in no way interferes witlr thei business. In Life Insurance, you will doubtles have seen the strong articles recently in the *Dail News* respecting the Ætna Life Insurance Compan of Hartford. The company, through the agen here, threatened an action of damages against th *News*, but so far has done nothing.

FIRE RECORD.

Toronto, August 16.— A fire broke out o Adelaide Street a little west of York, consumin the upper part of the house of John Bell and number of houses belonging to Mr. Bowman Mr. Bell was insured in the British American f $, the other property was insured in th Western; the Company will have to pay abou $1,750.

Aug. 19.—Residence of Mr. Hicks; insured c contents for $600 in the North British and Me cantile; the building was owned by Mr. J Mitchell, who resides in Quebec, insured for $8 in the Provincial.

Quebec, August 13.—Two houses fronting Augustin and Cross Streets were totally consume including the rear buildings; total loss, includi contents, $10,000. The buildings destroyed we Powell's store, O'Connell's frame faced with bric Allen's, stone; Allen's, frame; Mrs. Fahey frame; Ryan's, frame; Campbell's, frame; M Cullin's, frame; Graunery's, frame; Bulger's a A. H. Murphy's slightly damaged. The co panies named lose as follows :—British Americ $2,800; Western of England, $2,000; Queb Fire, $1,500; Provincial $415; total insuran $6,715. The fire broke out in McCullin's stab and burnt twenty minutes before it was discover by any one but the owner. He, instead of givi alarm, endeavored to save his property, so th the fire brigade were not notified for twenty-fi to thirty minutes after the fire commenced.

Whitby, August 6.—Brown & Patterso Foundry; loss $25,000 to $30,000; insurance abo $11,000; cause unknown.

Georgetown, August 15.—This place had narrow escape from a sweeping conflagration fr extensive fires in the adjoining woods.

Matilda, August 13.—Geo. Robinson's dwe ing-house and outbuildings; loss $2,000; no surance.

Seneca, August 8.—G. Powell and J Dalto houses and some other property; Dalton was sured for $800 in the Victoria Mutual.

Nassagewaya, August 15.—A fire wh originated in the woods and did extensive dam in various places, reached the steam saw mill a dwelling houses of Mr. Cargill and consumed the Messrs. Guffin & Hatton had 600,000 feet of p lumber on the premises; their loss will be to $5,000; Cargill's loss not stated. A Mr. Moff lost a barn with 16 tons of hay by the same fi no particulars as to insurance.

Harrington, Ont., Aug. 12.—Barn of Jam Ivenson totally destroyed, loss $800, no insuran It is thought that the fire originated from smoking of a pipe.

Mono Mills, Aug. 15.—Tannery of Campbel Sons; loss $15,000; about one half the furnit and a small quantity of leather were saved. insurance.

St. Catharines, August 11.—Brick cottage of James Heap; loss $150, covered by insurance in the Liverpool and London, and Globe.

The Late Fire at Stayner.—The insurances on the Northern Railway Station and the buildings attached amounted to $4,650, which amount was divided equally between the British America, the Provincial, the Imperial, the Phœnix of London and the Western of Canada. The loss to each will be from $700 to $800, according to the result of the adjustment now pending.

The Late Fire on Victoria Street, Toronto.—Suspicion is pretty strongly fixed on a certain party in connection with this fire; there is talk of a fire inquest.

Stratford.—The Town Council of Stratford have agreed to submit to the decision of the ratepayers of the town the question, whether they will purchase a steam fire engine.

Dangerous.—Information has reached us that some of the Insurance Companies who have not complied with the law, in respect to deposit, continue to take risks in a quiet way. This is a risky business—much more risky than fire insurance is ordinarily supposed to be. It is also rumoured that detectives are watching some of the representatives of these unlicensed Companies.

Lost.—On the 13th instant the schooner Notre Dame de St. Louis, of Quebec, from Montreal to Charlotte Town, P. E. I., with flour, ran ashore at Pierce when attempting to get under weigh. A mid lamp in the cabin was overturned by the shock, and in a few minutes the cabin was in flames. The high wind rendered it impossible to extinguish the fire, but a small part of the rigging and about 200 brls of flour were saved; the rest of the cargo and the vessel were entirely destroyed. The schooner belonged to Mr. Miller of Kamouraska.

Conduct at Fires.—The New York *Insurance Journal* referring to our remarks a few weeks since upon the reckless conduct witnessed at the late fires in this city, says:—The *Canadian Insurance Chronicle* complains of a state of things in Toronto in reference to the conduct at fires similar to that which existed in our city prior to the introduction of the paid fire department, when the fire companies were directed by officers who were unheeded and even defied in the reign of the "volunteers." A destructive enthusiasm, more fatal than the flames, seems to guide the action of those who rush to the scene of disaster at the cry of danger: and perhaps without any other design than that of being useful, these ardent men occasion more mischief than the fire itself. In New York, upon the discovery of a building on fire, a cordon is immediately formed in front of the house by the police, into which no one is admitted except those who have been previously privileged by a badge worn upon the coat. Then the fire patrol generally attend to the preservation of those articles that are in jeopardy, and everything thus proceeds with as much order and as little violence as circumstances will permit. The city of Toronto ought to be armed with similar resources, and the losses at their various conflagrations would be much reduced.

Insurance Imposts.—The insurance companies transacting business in the State of Kentucky, who are taxed at the rate of five per cent. on their premium receipts, have united together for resistance. The companies are about forty in number, and they propose submitting the question to the Supreme Court, whether the citizens of the State are entitled or not to the privileges of the several States. It is torture enough to respond to the current taxes of a State; but that one should be invented for the special punishment of companies that ought to be cherished for their usefulness, is an absolute outrage upon ordinary justice.—*Insurance Journal.*

Agricultural Mutual Ins. Co.—The Secretary of this Company informs us that during the month of July 7,632 policies were issued, and the number for June was 1,621, making a total of 3,253, against 2,665 last year—a number then considered an extraordinary large issue.

Railway News.

Nova Scotia Railways.—The visit of the Minister of Public Works to Nova Scotia has already borne fruit. Tenders are asked for certain works on the line between Halifax, Windsor and Truro. These works comprise the repair of several bridges, improvements in masonry, the substitution of solid earth embankments for existing wooden structure, together with station accommodation at Richmond. Expenses are to be reduced by the dismissal of unnecessary employees.

Great Western Railway.—Traffic for week ending 31st July, 1868.

Passengers	$28,183 30
Freight and live stock	33,054 16
Mails and sundries	2,187 75
	$63,425 21
Corresponding Week of '67.	66.419 61
Decrease	$2,994 40

Northern Railway.—Traffic Receipts for week ending 8th August, 1868.

Passengers	$2,549 68
Freight	5,343 08
Mails and sundries	233 86
Total receipts for week	$8,126 62
Corresponding week 1867..	11,544 13
Decrease	$3,417 51

Grand Trunk.—Mr. Peter Clarke of Montreal writes to the *Investors' Guardian*, London, England, respecting the management of the Grand Trunk as follows:—

Sir,—One great source by which the income of this company may be improved is by an efficient control over the passenger fares. At present some of the passengers pay their fares to the clerk at the booking-office, whilst others pay them to the conductor (guard) when the train has started, and not a small number never pay their fares—they give a present (much less than their fare) to the conductor and then travel free. Between this city and Toronto there are six or eight of those conductors employed: all those, with the exception of *one*, follow the plan I have stated. I cannot speak with certainty about the conductors on the other parts of the railway. I have enquired of two parties who travel a good deal on the line between here and Toronto, and asked their opinion as to the extent to which this dead-head system is carried; they estimate it at one-fifth of the entire number of passengers, say 20 per cent. Take it at one-half, or 10 per cent over the whole line, it would amount to £700 to £800 sterling per week, or £35,000 to £40,000 per annum.

Mining.

Moisic River Mines.—A correspondent of the Hamilton *Spectator* visited these mines. He says that the ore is found at the very works in the form of a magnetic iron sand, and almost of pure metal. This is thrown into the first and brought out a mass of metal, ready for the hammers. For a distance of three miles down the coast this rich metal extends, and in some cases is six feet in depth. The Company has secured 12 miles of wood land on each side of the Moisie River, by which they will have a supply of charcoal for many years. Mr. W. M. Molson of Montreal, is the President of the Company. It is intended to ship the iron sand to Cleveland, Chicago, New York and Philidelphia in its crude state in addition to the manufacture of iron on the Company's property.

Paid up Shares.—The case of the Imperial Silver Quarries Company has raised an important question about fully paid-up shares. Shares given to directors to qualify them for a seat at the board must now, according to Vice-Chancellor Malins, be considered as carrying a liability equal to the nominal value of the shares; and shares allotted fully paid up, unless to a *bona fide* holder or for purchase-money, must, we presume, be regarded as still carrying the original liability. This doctrine is somewhat startling at first, but when it is examined in the light of reason and common sense, it is seen to be conformable to both. For my own part, I hail it with considerable satisfaction. I could name more than one company in which people were induced to become shareholders on account of each of the directors having a stake of £1,000, when in reality they had not the value of the pen this is written with. Once let it be an understood thing that directors' and promoters' fully paid-up shares will in case of suspension or winding up be liable for the whole amount, and directors will not be as plenty as blackberries, as they have been for sometime past. Shareholders' eyes are being gradually opened, and they will perhaps not make such mistakes in the future as they have in the past.—*Investors' Guardian.*

PRODUCE OF COAL.

According to the latest returns which are at hand, it would seem that the total known produce of coal in the world is thus distributed over the chief nations:—

	Tons.
Great Britain	101,630,000
United States	25,800,000
Prussia and the Zollverein	20,610,000
France	10,710,000
Belgium	9,935,000
Austria	4,500,000
British North America	1,500,000
Russia	1,500,000
Spain	300,000
New South Wales	250,000
Ireland	123,500
Total	176,858,500

It would appear, then that of the total known produce of coal in the world, Great Britain raises more than half (57 per cent.), although it forms probably not more than one in forty of the population of the world. If to this coal produce we add that of the United States and the Colonies, we may conclude that the Teutonic race enjoys 73 per cent. or almost three parts out of four of the coal raised. It is hardly possible to over estimate the forces acting in our favor which are represented by this partial monopoly of the most powerful material agent of civilization.

Trade of the Upper Lakes.—The report of the American Bureau of Statistics for 1867 shows that the number of Western steamers has been nearly doubled, and that the tonage has more than trebled in fifteen years. In 1852 the total tonage of the Western lakes and rivers was 432,021, against 902,500 in 1866. The sail navigation of the upper lakes alone increased 900 per cent. in fifteen years ending with 1866, when it was 305,000 tons. In 1830 the whole tonage of the country was but 1,200,000 tons; in 1840 it was 2,200,000, and in 1866 4,340,000. That is, the interal navigation began only in 1830, when it amounted to no more than 7 or 8 per cent. of the whole, and now it is 22 per cent. In 1852 there were 687 steamers plying on the Western waters, of 171,153 tonnage, and in 1866 there were 1,312, with 364,964 tons.

European Assurance Society.

Established.....A. D. 1849.
Incorporated.....A. D. 1854.

EMPOWERED by British and Canadian Parliaments for

LIFE ASSURANCE,
Annuities, Endowments,
and
FIDELITY GUARANTEE.

Capital ..... £1,000,000 ..... *Sterling.*
Annual Income, over £330,000 Sterling.

CASH ASSETS.....ONE MILLION DOLLARS.

$100,000 deposited with the Receiver General of Massachusetts for the protection of Policy holders.

ANNUAL INCOME.....$500,000.

$100,C00 divided this year in cash amongst its Policy holders.

Montreal Board of Referees:—Hon. Geo. E. Cartier, Minister of Militia; Wm. Workman, Esq., President City Bank; Hon. J. O. Bureau, M.C.S.; E. Hudon, Fils & Co.; John Torrance, Esq., Merchant; James Ferrier, Jr., Esq., Merchant; Edward Carter, Esq., Q.C., M.L.A.; C. D. Proctor, Esq., Merchant.

Examining Physicians:—J. Emery Coderre, M.D., Professor of Materia Medica, &c., &c., of the School of Medicine and Surgery, Montreal, and of the Faculty of Medicine of the University of Victoria College; William Wood Squire, A.M., M. D., Graduate of McGill College; Francis W. Campbell, M.D., L.R.C.P., London.

For a sufficient test of merit we beg to state since the commencement of this old and reliable company in Canada, we have had the pleasure of insuring members of Parliament, some of the leading legal talent, and amongst nmnerous others, several of the leading merchants in this city.

This Company was the Pioneer Company of thenon-forfeiture principle, and still takes the lead for every Policy it issues is non-forfeitable after one payment. The Company is now erecting a new stone building, five stories in height, at the cost of $100,000, similar to the Molson's Bank of this city, but of much larger capacity, having 75 feet front, and 116 feet depth, containing three Banks, some Express Offices, and the Post-Office, yielding about $8000 income, annually, all of which is the accumulating property of every Policy-holder.

The Company has issued nearly 2,000 Policies since the 1st January, 1867, which is the largest number, in comparison to the expenses, of any Company in Europe or America.

Such are the Results of the Cash System.

Full particulars, history of the Company, Rates, &c., can be obtained at the Managing Office for the Canadas.

THURSDAY, AUGUST 20, 1868.

VOLUME II.

The first year of the existenee of this journal has closed and, as evidenee of the sueeess that has attended our efforts to supply an admitted want, we lay before our readers, at the advent of a new volume, a paper of sixteen pages instead of the modest eight page sheet that sufficed at the outset. The variety of subjeets with whieh we have been called upon to deal, and the many important matters affecting joint stoek enterprise that engrossed publie attention, have pressed sorely on our limited space. Though disposed to deal fairly by each interest we have been compelled to administer what might be termed scant justice. The result is that necessity has forced an enlargement of our borders. The support accorded to our undertaking has been generous and the sympathy of those whose approval is worth the endeavor to gain has not been with-held. We do not pretend to furnish light reading; our aim is rather to collect and diffuse such statistics and other information as will prove not only of immediate service, but also of permanent value to those interested in the subjects that come within our scope. The class to whieh we look for support is made up of those who desire to keep themselves informed, at the least in a general way, of the progress and state of the material interests of Canada, of the movements of capital, of the success or failure of the many combinations whereby enterprise seeks to accomplish its ends. The theories of the speculative are hereto be found along side the results achieved by the practical man. Manager and agent are here brought face to faee, and he who supplies the moving principle has a plat form which enables him to see the whole machinery at work and compare his own success or failure with that of his neighbors. The Reports of public companies which some may, and doubtless do, consider dry reading are now found to be not only of practical service to those immediately concerned in their statements, but also, of interest to a much wider circle. For instance, the Report of an Insurance Company interests agents and stockholders, but it also commands the attention of those individnals whose property is covered by its policies, of the banker whose funds are occasionally sought to be used and the broker who traffics in its shares or advises this sale and that purchase. A Joint Stock Company whose stock passes through many hands must, if it would give such stock a real ascertainable value, let the public know what its position is. We have among us few men with large balances lying idle so that an enterprise of any magnitude, or even of ordinary dimensions, must needs appeal at the set-out to the lawyer, the merchant, the farmer and the mechanic, as well as to those who deal more directly in money or those technically called investors, for the means of attaining its ends. Take the case of our banks. They are not the private property of a few individuals, such as the Rothchilds or the Glyns, but the result of united effort on the part of innumerable Browns, Jones' and Robinsons. Our banks and most of our public companies are built on the earnings of the many not on the accumulations of the few. We have to stand by each other, through lack of capital, and make the pennies of the industrious and well-to-do discharge that duty which the pounds of the rich perform elsewhere. When the protest from our Board rooms are sneered at as the offspring of selfishness, and the opinions of bank managers show a particular scheme of legislation to be mischievous, if not ruinous in its tendencies, some affect to regard such as the utterances of "blood-sucking money lenders," forgetting that our banks are not corporations *sole*, but institutions in which are invested the surplus means of thousands of our fellow citizens of every class. Injury to them implies injury wide-spread and disastrous. Hence it is, not to diverge too far from the subject in hand, that in this country especially, interests are so interlaced as to act and react upon each other and hence the value of such a journal as this, to wide scattered and seemingly unconnected classes.

While, therefore, it is our duty as well the best policy, to assist prospects of a praiseworthy character we, at the same time, claim the privilege of journalists in distinguishing between the hollow, the pretentions and the miseonducted, and such enterprises as combine the opposites. Without malice or partiality we have ventured to critieise free that which provoked censure or deserved praise. Corporations are said to have souls; in some cases there is noticeable la

of body also. It shall be our object, as it has heretofore been, to endeavor to do justice and in exercising the prerogative of criticism we deprecate the imputation for improper motives until we have shewn ourselves recreant.

It is needless to say that our ideal of what a journal such as ours should be, has not yet been reached; but while we fully apprcciate our distance from the proper standard, we are certain that every effort will be made to increase the usefulness of the MONETARY TIMES, to surround ourselves with a staff of writers whose contributions will reflect credit on the journal and on the country, and to furnish such information as will be of service to the various interests we represent.

THE GORE BANK.

As was stated by Mr. Street at the late meeting of the shareholders of the Gore Bank, the practical question is, what is to be done with the institution. It is claimed that seventy-two and a half per cent. of the capital is intact. This estimate leaves $586,-710 available for future use. The liability to the public is:

Circulation	$201,512
Due to Banks	26,295
Deposits	268,666
	$496,473

To meet this the bank has

Coin and Prov. Notes	$192,350
Real Estate	82,007
Goverment Securities	82,733
Notes of other banks	17,608
Due from other banks	80,959
Notes and Bills Discounted	730,013
Other Debts	195,509
	$1,381,179

Of the value of this the following approximate estimate may be made, making allowances for contingencies:

Coin, &c.	$192,350
Real Estate	52,000
Government Securities	82,733
Other Banks	17,608
Due from Banks	60,959
	$405,650

We presume that the balances due from banks include the Bank of Upper Canada debt, and if such is the case the estimate we have given is near the truth. Of the $192,-350 of coin and Provincial notes, we imagine that the largest part is Provincial notes which Mr. King doubtless insisted upon being held by the bank. However, after making every allowance and taking things at their worst, the bank has enough to pay all sums due to the public less $100,000, and will have $730.013 of notes and bills to the good.

Such being the state of the bank's affairs, it is natural to enquire what course should be pursued. It is proposed that the shareholders shall wait without dividends until sufficient is earned to replace the capital that has been lost. Another suggestion is that permission should be obtained from the Legislalature to reduce the capital. The other alternatives are amalgamation or liquidation. But as amalgamation seems to have met with no advocates, it may be taken for granted that it is out of the question.

The bank has undoubtedly suffered by the withdrawal of public confidence. A comparative statement of deposits and circulation of 30th June, 1867, and of the same date in 1868, shows a decrease in deposits of $761,000 and in circulation of $335,000—total $1,096,-000. On that confidence rested the deposit account and the circulation. Any calculation of future profits must be toned by the knowledge that two important sources of profit are well nigh closed, and competition has to be expected with institutions in the full enjoyment of both. Small means imply small accounts and small profits. But the shareholders are for the most part individuals whose influence and wealth would tell greatly in favour of any institution which they chose to do business with. If they all determine to stand by the bank, and a thorough investigation, such as is now contemplated, reveals nothing worse than what is known, public confidence might be again commanded. The Bank of Montreal at one time was in as bad a position as that which the Gore Bank now occupies, yet it has become the largest and wealthiest bank in the country. The gross profit for the year ended June 30, 1868, is placed at $71,265. If such a profit was realized during a time of more than ordinary anxiety and trouble, when confidence in the bank was well nigh carried away in a panic, when every bank suffered to a greater or less extent from "runs," when bill holders were frightened and shareholders themselves grew timid, when ignorance prevailed regarding the bank's true position and the worst, of course, was imagined, it is not unreasonable to expect a greater degree of success in a state of circumstances infinitely more satisfactory. There is about $600,000 to work with, and the double liability of shareholders to fall back upon.

The fall in the market price of the stock can be easily understood. A local bank in a small city will always have trouble with its stock. A few thousand dollars worth of shares put on the market is not readily absorbed. It may not be sold from any desire to get rid of the stock, but rather on account of a necessity to use the proceeds. It will be found, we think, that the first noticeable decline in stock was occasioned by a few shareholders selling out, not through fear, but to procure funds for use elsewhere. When shares do not float lightly in Hamilton it cannot be expected that they will do so elsewhere and a fall is the consequence. We are inclined to think therefore, that if continuance in business be determined on, it would be well to bring the head office to Toronto—a central locality—establish a branch in Montreal and keep an agency in Hamilton. A reduction in capital would then be advisable, as it is a poor business keeping afloat an institution without dividends. There are two great centres of business in the provinces, Toronto and Montreal, and the best prospect is afforded to the Gore bank by migrating to Toronto.

There is no necessity for going into liquidation. The rejection of Mr. Street and others who are largely interested in the bank and whose assistance is invaluable, we conceive was unwise. It is said that the present Board advocate a winding up. Were the bank's doors closed to-morrow and the process of realization commenced it would take a length of time to complete the work and the expense incurred would necessarily be heavy, but not more so than it is at present to keep the institution open.

The circulation and deposits would at once commence to carry six per cent interest, and this, under present circumstances, would perhaps involve an expenditure of, say $10,-000 for the first year. Then a forced realization of the notes and bills would certainly cause a heavy loss, say from ten to twenty per cent. If liquidation be determined on it might be just as well to let the business go on, due caution being exercised and at the same time realization might continue in progress. If, at the end of a certain time, public confidence were not restored and success seemed distant, the whole business could be closed up at once- For these reasons we are inclined to agree with the late President, that business should be continued and a bold effort made to regain public favor. It is a pity to throw away a business, be it small or great, which it has taken long years to secure, to lose the money paid away to obtain a charter and to sacrifice an investment when the chances are rather in favor of than against improvement and the institution is perfectly solvent. As we take it, Hamilton is deeply interested in the existence of its only local bank; its fall will be a loss of *prestige* which an ambitious city cannot safely stand. Much depends however, on the report of the Committee of investigation. Unless a full enquiry be made and a trustworthy report

laid before the public, it will be better to realize the assets than to peril what is now on hand in a new career based on deception. We believe that the shareholders are bent on knowing their real position and when that knowledge is obtained it will be for them to take such measures as will be deemed most expedient.

PROVINCIAL INSURANCE COMPANY.

The report read to the shareholders at the last annual meeting of this Company, shows that a large increase has taken place in the business—the premiums for the year having exceeded those of the year previous by $44,735.98. The net profit realized is placed at $35,549, and a dividend of three per cent. was declared. In analysing the figures given in the report, we find that the per centage of loss to premiums (less re-insurance) is over 60 ; on the Fire business, nearly 53 ; and on the Marine, over 67. The average rate of premium on Fire risks is probably 1½, and on Marine, 6 per cent.

In making the calculations we have taken the figures as they stand in the report, but, on reflection, we feel scarcely justified in allowing ourselves to be carried away by their specious appearance. Balance at agencies $36,655- On referring to the report of the British America, whose paid up capital is $200,000, we find they have out in agent's hands only about $19,000. We suppose that the $35,665 represents, for the most part, premium notes on the marine business. However the amount out in this way does seem large considering that the profits of the year are $35,549. The next item is Sundry Debtors $40,013. This mysterious generalization would be more intelligible if it were replaced by the designation "Bad and Doubtful debts." It looks so suspicious that we take the risk of advising the company not to rely upon it as an asset. On the heels of "Sundry Debtors," we see "Salvage claim and unpaid stock $19,425." Salvage claim and unpaid stock! The in harmonious blending of the two reflects little credit on the analytical powers of the author of the report. Surely it would have been an easy thing to say Salvage so much, and Unpaid Stock so much. If the combination was intentional, then we beg to assure the Directors that transparent tricks of the kind are not harmless, but well calculated to beget suspicions in the minds of stockholders, and to stamp the report as unreliable. The books of the company are not open to the public, and seeming trifles are apt to do a great deal of harm. When a company with a paid up capital of only $89,738, and no reserve carries risks to the amount of $8,000,000, a little trick may prove dangerous.

We do not think the Director's report is fair. It most certainly does not "exhibit a full and unreserved statement of the affairs" as the Act of Incorporation requires. We can easily understand why the annual meeting was harmonious, as it undoubtedly was, seeing that the report was merely read by the President instead of printed copies being in the hands of every one present. Its round numbers were pleasant to hear, and its announcement of a three per cent. dividend was not unwelcome. Dissatisfaction, if there were any, had no material. Somebody did ask if the $11,878 were actually in the bank, and the President assured the inquirer that such was actually the case. But no one asked, for we suppose that few knew, why the company's premises were lately mortgaged to a Building Society for $6000. Nobody asked why such a proceeding was necessary in the face of a net profit of $35,549. True, the deposit of $16,666 had to be made with the government, but the "net profit" exceeded by far the required amount.

However, a three per cent. dividend was declared. We hope that the clause in the Act of Incorporation which states "that no dividend or bonus shall be declared or paid out of the capital stock of the Company was kept in mind by the Directors. At all events, this declaration of a dividend has not brought Provincial Insurance Company stock up even to a quotation mark. Its increased business has not brought forward purchasers. Why? Its shareholders are for the most part substantial persons; its directors are men of worth, respectability and means; its prospects are seemingly good; it has realized $35,549 profits from one year's business ; and a dividend of three per cent. has been declared. Why then is its stock valueless. It is not for us to answer this question, we simply state the fact. What has become of the capital? Where is the reserve? Where is the reinsurance fund? An Insurance Company is not an institution chartered to gamble. There are certain well understood principles which Insurance Companies find it necessary and expedient to apply, and certain fixed rules, the essence of experience, which they should not, if they value their existence, ignore. If such be disregarded, the shareholders feel the consequences in the loss of their investment.

But we are not without hope that the Directors of this Company will see how dangerous this hand-to-mouth, trust-to-luck system of doing business is, and make some effort to improve a state of affairs which they must know is unsatisfactory. We are aware that the present is an improvement on the past, but that is the strongest reason why an effort should now be made to understand how matters are with them. Let a President be got who will give his attention to the affairs of the Company, and pay him well for doing it, for however able the present incumbent may be, he certainly has not the requisite time at his disposal. Let this declaration of dividends be put a stop to until the capital be restored and a reserve formed. Let further calls be made on the subscribed capital, and a fresh start had. A committee should be appointed to investigate the state of the Company and settle on some definite plan. Were things on a proper footing, the business would increase ; a good profit be realized, and the stock would soon rise in the market. We strongly advise the Directors to go to the office of the British America and humbly accept instructions in the art of reviving an Insurance Company.

We use the word reviving advisedly. If we applied to the affairs of the Provincial, the test to which the Insurance Commissioners of the State of New York subject the Fire Insurance Companies of that State, we should find that the Provincial would compare far from favourably with similar corporations. A reinsurance fund of fifty per cent. of the premiums on unexpired fire risks, and one hundred on marine risks, is there insisted upon. The unpaid liabilities of the Provincial are given at $51,251 ; a reinsurance fund of (to place it at an absurdly low figure) say $110,000, should be available; the capital paid up is $89,738. The total liabilities would then be $250,989. Taking for granted that the "Funds and property" represent cash assets of $181,039, there would be a deficieney of $68,950. But if we deduct from the sum total of "Funds and property" bad and doubtful debts the assets would be greatly reduced, and the startling fact appear that the paid up capital is lost. However, we submit these remarks to the Directors in good faith, trusting some one will be found among them with courage enough to insist on knowing the truth.

NEW YORK LIFE.—An exchange says that this Company has decided to deposit $100,000 in this Dominion, and otherwise to comply with the new Insurance Law. It is added that the deposit will be made without delay.

WITHDRAWELS.—The Secretary of the Berkshire Life Insurance Company of Massachusetts, informs us by a private letter of the fact that this Company has withdrawn from the Dominion. The reason assigned is that the Company cannot under the State Laws of Massachusetts, comply with our law.

The Western of Buffalo, Phœnix of Brooklyn and Security of New York, all marine, are among the Companies that have withdrawn.

Mr. Young, of Georgetown, has been appointed the Stratford agent of the Royal Canadian Bank.

OW TO MAKE THE ST. LAWRENCE THE COMMERCIAL HIGHWAY OF THE WEST.

No. 3.

Halifax, N.S., Aug. 7, 1868.

Before dealing with the wider subject of our ility to compete with the Erie Canal for the ade of the Western States, let us glance at a less portant point, but one that more immediately ncerns the present—the importance of the St. wrence in developing our trade with the Mari- ne Provinces and with the West Indies. Our ports to the latter are met by the products of e Western States, and of the western portions of e Dominion, of which New York becomes the tor. Our exports to the Maritime Provinces by e St. Lawrence have to contend with a formida- competitor, the Grand Trunk Railway, to the ergy and enterprise of which we are under great ligations. It has now an advertisement in the lifax newspapers, that it "will, at all times, e freight for Montreal or Toronto at the low- rate for which any steamer then in the port of lifax will sign bills of lading." This is an omaly that deserves enquiry. Either the and Trunk must lose by such low rates of ight, or the facilities for transport by the St. wrence must be very imperfect or greatly im- led. It is manifest, at the outset, that a water hway which nature, without cost or charge, ps in working order for seven months of the r, must, while navigation is open, be aper than an iron road, built and maintained heavy cost, which requires constant repairs, should pay not only its working expenses, but some return for the millions that were ex- ded in its construction. *Every ton sent by which could be conveniently forwarded by er, represents a certain loss to the public—so ch deducted from the productive capital of a ntry.* Somebody must pay for railways. nebody must keep them in repair, and the ex- se of railway traffic must fall ultimately on ebody, the producer, the consumer, the mer- nt, or the railway company. But the results he trade by the Grand Trunk are not as bene- l as might be expected. The flour and other ducts of Western Canada are forwarded by rail n Montreal to Portland, and thence to Halifax steamer, which carries back but little in re- n. Hence the flour has to be paid for in cash, the drain on the Lower Provinces is very heavy, trade being altogether one-sided, and unsatis- ory, in spite of the very low rates at which r is landed by the Grand Trunk at Halifax. would be slightly ungracious in any one exeept tockholder in the Grand Trunk to enquire ther the public are not gaining more than the pany by this traffic. It is, however, perfectly r that if facilities are afforded for transport by e propellers direct from Toronto to Picton, and low down freights are lowered still more by unerative return freights, the Grand Trunk, ing the summer months at least, cannot pre- l to compete with our water highway; and n an advertisement as that which I have ted, would be simply an offer to do business on proverbially unprofitable principle of "work- for nothing and finding yourself." The pro- l to encourage return freights of fuel by tem- arily giving a bounty on Nova Scotian coal, taking off canal dues on provincial coal, though at first sight it might appear to be simply a boon to Nova Scotia, would have in the long run proved of greater importance to the grain grower and manufacturer of Canada West. Very many public men in Ontario, Quebec and New Brunswick, who opposed a duty most strenuously, were favorable to the other proposition, holding, not unreasonably, that any imposition for the general benefit should be equally borne by the Dominion at large. As the measure would have had the support of Mr. Galt and other independent members, it rested with the Government to say whether it should be adopted or not. But there were political considerations of the utmost urgency that rendered the measure advisable, apart from its commercial bearing. The Nova Scotians were fretting under some real, and many imaginary grievances, and were, with singular unanimity, about to appeal to the Imperial Parliament to dissolve the union. The adoption of the proposed measure would have cut the ground from under the feet of the Nova Scotian delegation, and would have given the beleagured friends of union among us, a weapon by which they eonld have defeated the opponents of confederation. On returning to Nova Scotia, after the public meeeting at Toronto, in April last, I urged most strongly upon the Finance Minister my belief, that the agitation in Nova Scotia was likely to increase in intensity, and that the proposed eoncession, if immediate, would shut the mouth of discontent, but that it would come too late, if deferred until another session. Time will show whether the impression was erroneous or not. That the Nova Scotian members did not urge a measure which would have had the effeet of stultifying themselves, was the strongest argument to spur the Government on, and is certainly the last reason which ean be alleged for no action having been been taken. Why nothing was done, is still a mystery to us. The only parties who could, by any possibility, be injuriously affected by it, were Pennsylvanian coal owners, and the Grand Trunk Railway. The former, though omnipotent in the United States, are powerless here; while even the great ability and zeal of those who manage the latter, can hardly have raised it to such a formidable position, as to render the peace and even the permanence of the Dominion a matter of secondary consideration.

As we cannot find in either of these influential interests a clue to the difficulty, we must assume that it will be found in some urgent political necessity not yet confided to the public.

Though there may appear to be a competition between the Grand Trunk and the St. Lawrence route, it is only temporary, and arises from the limited amount of business that is accommodated. That the traffic has assumed even its present dimensions, is due more to the energy and enterprise of the Grand Trunk, and to American legislation, than to our appreciation of the facilities for trade which nature has bestowed upon us, in our great water highway to the West. Were our trade by the St. Lawrence developed, the Grand Trunk would in time be equally the gainer. During seven months of the year it would secure most of the passenger traffic, and even if the heavy freights should be attracted by the St. Lawrence route, the Grand Trunk would have a reversionary interest, which would for five months in the winter, give it the monopoly of the trade, and enable it to reap the benefit of any impulse which had during the summer months been given to intercolonial trade by way of the St. Lawrence. Whether the Intercolonial Railway will prove a more troublesome competitor I need not here enquire. It is difficult for the casual observer to see that the Grand Trunk has anything to fear from it, and even if it has, by the time that that formidable undertaking is accomplished, the traffic to be accommodated, if we put our shoulders to the wheel, will tax the capabilities of all the outlets for our trade.

There is, however, room enough for all, and but little need for jealous rivalry, in that wider field, the West Indian and South American trade. Its capability for almost unlimited extension I have imperfectly sketched in my pamphlet on Intercolonial Trade. At present more than sixty millions of dollars worth of products is exported by the United States, most of which we could produce more eheaply than themselves. We have been so long inured to being "hewers of wood and drawers of water" to the Americans, that like their bondsmen in the South, we prefer relying upon our taskmasters for existence, and dread the liberty of independence when it is bought at the price of energy and self-reliance. We have hitherto had but little ambition to rise to a more lucrative and honorable position in the scale of nations, and are now forced, by the repeal of the Reciprocity Treaty, that commercial Emancipation Act, to face the somewhat startling fact, that we can compete on favorable terms with our overtaxed neighbors. There are some markets in the West Indies to which we export nothing, the Americans enjoying a monopoly. How long they will be able to remain our factors, purchasing our products in the face of a 20 per cent. duty, and making a profit by exporting them to markets, which are as open to us as to them must depend upon time, or at least upon our capabilities for sedentary inaction. Our freedom from taxation is a great advantage in our favour, and if we supplement it by increasing our facilities for moving our products cheaply to the seaboard, the gains will be so plainly ours, as to preclude any indifference on our part.

We have the necessary class of vessels, intelligent and reliable shipmasters, and merchants familiar with the West Indian trade—all the machinery that is required for developing this field of enterprise, so soon as the manufacturers and producers of the West begin to covet the large profits which reward the enterprise of our neighbors in the markets of the south.

The trade will be carried on by means of propellers running to Pictou. Mr. Patterson, the Secretary of the Corn Exchange of Montreal, in his very able and exhaustive report on the trade of that city, suggests that the canals should be deepened and improved, and that produce for Europe should be transhipped at Montreal from barges into sea-going vessels, while that intended for the Maritime Provinces and the West Indies should be carried direct to Pictou by propellers from the lakes. This proposition, which is a very sensible one, goes a good deal farther than he intended. If it is possible to send produce to Pictou in lake propellers, it is equally practicable to send the products intended for Europe to the same convenient point of transhipment. This proposal opens up a more interesting and important field than the West Indian and South American trade, and that is *the possibility of making a port near the eastern limits of the Dominion the point of transhipment for the exports to Europe from the Western States and from Western Canada*, a subject which I will treat of in my next.

R. G. Haliburton.

WASTED INVESTMENTS.

Editor Canadian Monetary Times.

But two years ago Ontario had one of its remittent speculative fevers. Oil had been discovered in the township of Enniskillen a few years before; prejudice had at last been overcome; enthusiasts proclaimed that a source of wealth had been discovered which would enable this Province to compete with any other country in the globe; money was being made, and everyone was determined to make it. The most stingy County Councils voted bonuses to the companies that would sink a deep shaft for oil. Many tried it, and "rowed up Salt river." One or two, the Goderich one for instance, were fortunate enough

to reach the salt. But in the counties of Kent and Lambton, what agreements were entered into, purchases made, and wells erected where the indications were promising. Unfortunately the fever and the price of oil reached their greatest height at one and the same time. The oil poured forth, the price went steadily down, and unwary speculators found themselves with unsaleable lands on their hands, investors with wells yielding rivers of oil, worth little more than the waters of the adjacent creek, hotel keepers had rats for boarders, and deserted villages to look upon from their front doors. Now the unhappy owners of real estate think of nothing but how to get rid of it, and so land in the western counties can be got at prices far below its actual worth as farming lands. So disgusted are they with their bargains that hardly any notice is taken of the announcement that Judge Higgins has been able to buy up all the oil in the market and what will be produced this fall, on such terms that by Christmas day the learned judge and his associates will probably be hundreds of thousands of dollars richer in consequence of this judicious investment.

In the oil regions of Pennsylvania, a similar revulsion took place. There, however, the people persevered until by this time a market has been found for the oil, and prosperity has rewarded the energy put forward. I have no statistics to show what the consumption of petroleum is in the United States, yet it must be an increasing one; but we have those published in the *New York Shipping and Commercial List*, and they show that this year, from the 1st of January up to the 8th of August, the petroleum exported was 53,280,000 gallons, against 36,139,000 during the corresponding period of last year. This increasing trade is not so much with England as the Continent; the exports up to the above date were respectively to the following ports: 1868, Bremen, 5,902,000 gals., 1867, 2,629,000 gals.; 1868, Antwerp, 3,850,000 gals., 1867, 827,000 gals. So that the United States, with an internal consumption at least as great as it ever was in the time of the wildest excitement, has developed an export trade which will reach, this year, probably 80,000,000 gals., and hardly existed three years ago.

The prices at which petroleum is quoted in New York are on the above date:

Crude oil in bulk 17½c. per gal., or $7 a barrel of 40 gallons; crude oil in shipping order 23¼c. per gal., or $9.30 a barrel; refined standard white 34½c, per gal. or $13.80 a barrel. In view of the comparisons I propose making, I may here mention that the difference of 5¾c., represented by the difference between the price of oil in "bulk" and shipping order," consists of the barrels and the cost of filling, &c. In quoting Canadian prices the barrels are always included unless specially excepted.

The effect this had upon the oil districts of Pennsylvania is thus given by a correspondent of the *N. Y. Tribune* writing from Oil City: "The "oil region has recuperated, and is now being "operated upon sound business principles. Lands "heretofore deemed worthless for oil boring pur-"poses, are in good demand, and the extent of "territory now in course of development is fully "quadruple in extent of that of all previous "years. This development is being made by the "oil operators to a great extent, and in all "portions of the oil fields, oil is being obtained "in paying quantities from a larger per centage "of wells than many previous years. Lands that "were freely offered one year ago at prices ranging "from $10 to $100 per acre, are now held at $1000 "to $1,200, and $3000 per acre is being freely "paid at Pleasantville oil fields. The excitement "is intense, but has taken a decidedly practical "shape. Lands are bought for development not "for speculation. $5 per barrel for oil at the "wells pays the producer very handsomely for "producing and development. * * At present "the demand is fully equal to the supply, and "every effort is being made to keep up this "last to an average. Those versed in the statis-"tical history of this business tell us that to keep "up the present daily production it is necessary "to have not less than 300 new wells going down, "or rather in process of drilling. * * Never, "to my recollection, has general business been in "a more prosperous state, or has the future of the "oil region looked so bright. * * Oil on the "creek and at the wells in different localities is "being sold at $4 to $6.75 per barrel, and com-"mands at Oil city $6 per barrel. The demand "is good, and the tendency still upward."

How different have been the Canadian oil interests, they have been truly "killed off" by the supply exceeding the local demand. Several things have been against us, a strong prejudice in England, the difficulty of deodorizing our oil, and the fact that a great part of the capital invested came from the United States and the investors considering the first loss the best, have abandoned their money and the country together. It has been impossible to send oil to the States owing to the prohibitory duty; the only resource open was to export it to other countries, and this has not been done for the reasons I have just mentioned. Some time ago Mr. McCrae, a Liverpool oil broker, examined a sample of oil refined at London, Ont., and pronounced it equal to the best American standard white. Before Mr. Higgins' "corner" this oil was selling wholesale at 10 and 12c a gallon, including barrels and excluding the duty, which would not affect oil shipped for exportation. Crude oil was a complete drug and could be bought at from 25 to 35 cents a barrel at the wells—including the barrels. Surely there is a margin here for some one to take advantage of—an advantage which would be productive of the greatest benefit to the country generally. My only surprise has been that refiners have not attempted to create this trade themselves instead of joining, as they are said to have done, Judge Higgins in his operation which at best can only secure a temporary advantage to the parties to the transaction.

Yours, &c.,

Oil.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

MONTREAL, Aug. 18, 1868.

The money market remains much the same as last week, if anything rather easier; loans of round sums, say $50,000 or over, could be obtained at six per cent. on undoubted security. The bank rates are from seven to eight per cent for good paper, very little is offering in the streets, and rates are uncertain; there are still more renewals on the market than usual, but when money begins to circulate freely, it is expected they will to a large extent disappear. For all building purposes, or for public improvements, there is abundance of capital at reasonable rates.

In the Auditor's statement of the condition of the banks in Quebec and Ontario on the 30th June last, the circulation is given at $7,286,588, against $8,404,377 same time last year, showing a decrease of $1,117,789, which is to be accounted for by the quantity of silver in use, not only in the country but also in the towns. I notice that the "silver nuisance" is attracting considerable attention in Western Canada, but I fear the I shall prove a true prophet, and that the comb nation will soon fall through. Here we have do nothing, putting up with the evil as incurable ti the Government takes same decided action in th premises. The deposits in the banks 30th Jun 1868, are $30,167,534, against $28,704,326 la year, an increase of $1,463,208; this shows th steady increase in the material prosperity of th country, which is further evidenced by the fa that the deposits are nearly $4,000,000 in exce of the paid up capital of the banks. Gold h not fluctuated very materially this week, an opinions here and in New York are very divide as to the prospects of a rise or fall. For my pa I believe it will rise, especially if we look at th fact that the imports into the States, 1st Janua to 1st Aug., are $145,173,534 specie, exclusive freight and duty, and the exports for same peri $59,079,058 currency, the difference has to provided for either in *Gold* or by the sale of U. Debentures, of which a large quantity, has be shipped to Europe, but it is believed on specul tion and not *bona fide* sales. There is at present great amount of reckless gold speculation in Ne York, chiefly short sales by weak parties, we ha already seen one large failure, and need not surprised soon to hear of more.

Stocks of all sorts are buoyant, but busine has been limited. Sales of Bank of Montreal 134½, but buyers are asking 135. Our stock an share lists will give full particulars of prices.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There was a fair business done this week, t demand for investment is greater than t supply.

Bank Stock.—Montreal has again advanced, a is to-day in demand at 133½ to 134. Britis nominal, at 103. There were transactions in O tario at 99 and 98½; a limited demand exists the latter figure. Toronto sold at 114½ and 114 and is in demand at the latter rate. There we considerable sales of Royal Canadian at 81½ to 8 the latter rate is freely offered. Commerce is great demand at 103; very little offered. Gore in market. Merchants' is offered at 106 w buyers at 105. Molsons in demand at 101, lit offering. There were small sales of City at 101½ to 1 and the stock is in demand. Buyers offer 107 Du Peuple and 105½ for Nationale; other ban nominal.

Debentures.—Canada sterling fives and sixes in great demand. Toronto offering to pay 7 cent interest. There were considerable sales County at high rates.

Sundries.—Building Society stock is again high er; Canada Permanent sold early in the week, 115¼ to 115½, but buyers now offer 116 for it, a there are no sellers; Western Canada is in gr demand, buyers are numerous and would adva but there is none in market; there are no sell of Freehold, buyers would give 103 to 103½. Sa of Canada Landed Credit stock, all calls pa took place at 62½. City gas sold at 105 and is demand at that figure. No Montreal Telegra in market. Mortgages are readily placed at 8 cent.; there is a fair demand for money.

BANK OF ENGLAND RETURNS.

The Bank Returns for the week ending, Saturd 8th August, compared with the corresponding peri of 1867, 1866, are as follows:—

	1868.	1867.	1866.
Bank Bullion.....	£21,371,989	£23,255,564	£13,622,
Res've of Notes.....	10,255,485	12,699,355	2,733,
Notes in circ'n... ...	24,963,380	24,343,480	25,042,
Rate of Disco't.....	2 per cent.	2½ per cent.	10 per c
Con's for money.....	93⅞	94⅝	87¾

Financial.

PROVINCIAL NOTES.—The following is a statement of the Provincial Notes in circulation Wednesday, the 5th August, 1868, and of the specie held against them at Montreal and Toronto:—

Provincial notes in circulation payable at Montreal	$2,612,727
Do payable at Toronto	1,114,273
Total	$3,727,000
Specie held at Montreal	$450,000
Do Toronto	400,000
Total	$950,000
Debentures held by the Receiver General under the Provincial Note Act	$3,000,000

COUNTERFEITS.—The Montreal *Witness* cautions its readers against taking counterfeit shillings. It says that a number of English shillings of the present reign are in circulation, which are so skilfully executed that they would readily be taken by an expert when tendered with numbers of the genuine, and the inexperienced would readily receive the single coin without suspicion. A slightly slippery surface and a defect in the shilling is the most conspicuous evidence by which it can be detected.

INSOLVENTS.—The following insolvents were gazetted last week:—John Hunter, London; L. J. Watson, Goderich; Thos. J. Leitch, Arnprior; Thos. Meares, Seaforth; Wm. B. Hut, Brantford; John A Bolkingham, Cobourg; West Brothers, Montreal; W. F. Howell, do; Oliver Lapaut, Sarnia; Stead and Crawford, Newmarket.

MR. YOUNG, of Georgetown, has been appointed the Stratford agent of the Royal Canadian Bank.

FALL IN PRICE.—Monetary affairs are at present in a very depressed state in Liverpool. The failure of Zeigler, Meiss & Co., a large firm in the cotton trade, with liabilities from £150,000 to £200,000, and some minor stoppages in the corn trade, have unsettled everything. I expect more difficulties in the cotton trade, and unless some changes take place in prices, difficulties in the corn trade are only what may be looked for.—*Investors' Guardian.*

REDUCTION OF TAXATION.—A reduction of taxation in the United States, to the extent of $164,000,000 within two years. By Act of Congress, July 4th, 1868, $60,000 were taken off. A law of the 3rd March, if filled, a further reduction of $4000,000; the cotton tax repeal Bill reduced the load $23,769,000, and an Act of March last repealed taxes to the amount of $44,500. Those reductions must tend strongly to relieve trade in the States, and restore some of its lost vigor and activity.

The Gore Bank wants to get rid of its Bank of Upper Canada Certificates, and also its City of Hamilton Debentures.

Commercial.

MONTREAL CORRESPONDENCE.

(From our own Corespondent.)

Since my last, the weather has been very changeable. A good deal of rain has fallen; but as the bulk of the harvest is now housed, no harm has been done; on the contrary, the root crop and timothy grass have greatly benefitted. The days generally are warm, but the nights are cool and pleasant. Accounts from all parts of the Province continue very cheering, and I see by an excellent summary in the New York papers, that a very large yield in the States, especially of wheat, is expected, whilst that of the coarser grains will be fully up to an average. It is a great pity that our Bureau of Agriculture has not a department especially devoted to obtaining from all sections of the Provinces reliable information respecting the harvest, and making such information generally known through the official organs. At Washington the Bureau of Agriculture has its regular correspondents in all sections of the States, who report as to the yield, and also the probable value of the crops. The utility of such statistics can easily be perceived. It might be done at comparatively little trouble and expense; a form should be sent round to all the country Reeves and Mayors, and also Magistrates, to be filled up with information respecting the crops in their immediate districts, which, coming from an official source, would command attention; at present such gleaning is left either to the press or private individuals interested in the grain trade, and is in most cases far from reliable. I think it would be well for you in Toronto, who are all deeply interested, to urge the matter on the consideration of your local Government.

I would strongly advise our farmers to hurry their grain to market, and take advantage of the present high prices. As a general rule, they seem always reluctant to do so, fancying that prices must rise if they hold off; the fallacy of such reasoning must be apparent, instead of prices falling by degrees through the gradual bringing forward of their supplies, they are apt to come down with a rush, when every one must sell; the markets are overcrowded; the means of transport run short, or freight has to be engaged at much higher rates, and both farmers and storekeepers suffer; the latter especially in not receiving their money in time to pay off old scores to the merchants, and come forward in good time to lay in their fall and winter supplies, before freight and insurance rule high.

It certainly cannot be expected in the face of news from all parts of the world, that prices can remain at their present high scale, and I opine that $1.65 for U. C. spring wheat will soon be a thing of the past. Business in all branches continues very dull, in fact each week seems quieter than the preceding. It is to be hoped a reaction will soon set in, as this state of affairs is very discouraging. *Groceries* of every description are exceedingly quiet; there is some little talk of trying, when the tariff comes before the House, to get the duties on wine altered, it being asserted that the present way of levying them leads either to prohibit the importation of fine wines or a considerable amount of falsifying invoices.

In *Dry Goods* the stocks are pretty well opened out, but so far only few buyers have come forward.

Boots and Shoes seem the only articles in which there is any liveliness, but even in them the trade is only just beginning to move.

In *Produce*, on Friday and Saturday, the flour market was brisk, but it has since subsided to its usual dulness; good strong baker's flour of favorite brands sells as high as $8.50, and U. C. spring wheat by the car load fetches $1,66; *long prices!*

TORONTO MARKET.

DRY GOODS.—Importations are now mostly to hand and are being arranged for the inspection of buyers, who, it is expected, will begin to come forward in the course of a fortnight. A fair, but not a large trade is expected. It is generally understood that country merchants are still pretty well stocked with certain lines of goods, such as Canadian woolens, and their requirements especially in such articles, will be small. Cottons are generally light in stock and they will be required to the usual amount. Country merchants complain of dreadfully slack times and say they are taking in no money; as a consequence their remittances are unusually slow. The great quietness in trade just now may be accounted for chiefly by the fact that the dry weather has brought the crops to maturity almost at the same time, crowding the harvest work into a much smaller space than usual, this has had the effect of keeping farmers and others close at home, and delayed purchases of goods till a more convenient season.

The demand for woolen goods is expected to be slack, because (1) of the large supply in the hands of country storekeepers, and (2) because of the low prices of wool, which has the effect of keeping this staple at home to a great extent, and thus increasing the supply of home-made flannels and cloths. Prices of woolen goods will open about 10 per cent. lower than the quotations of the spring trade. The importations of foreign woolens have been very light and the prices are firmer than for Canadian woolens. Cotton goods have altered little since the spring trade; we do not notice any material difference in the quotations of this market. In other articles there is nothing important to note, the usual stock having been laid in and a fair demand being anticipated.

GROCERIES.—*Sugar*—The market is dull and a decline in prices will be noted on reference to our quotations. The London *Produce Markets Review* says that an increase of 40,000 tons in the European crop is looked for; the Cuban crop is expected to yield 100,000 tons more than last year and an increase of 30,000 tons is looked for in the British West Indies. There are also 1,600 tons more afloat from the East to Great Britain, France, &c., while there is an excess of 10,000 tons on its way from Java to Holland. A probable increase of the crop of Mauritius, Louisiana, &c., is placed at 30,000 tons, so that altogether an increased supply of 220,000 tons may be looked for, an augmentation which would require an increased European and American consumption of 8 to 10 per cent. to exhaust during the twelve months, from June, 1868 to June, 1869. We need not say that we look for no such result at present and higher prices thus seem out of the question, which, unless a considerable revival in trade takes place, a further fall must be looked for. While there is much force in these remarks, yet the known lightness of stock in the principal markets is strong ground for maintaining the opposite view of the question.

PRODUCE.—*Wheat.*—There is no business doing of any consequence; the market is dull and lower than last week and closed nominal at $1.45 to $1.48 for both spring and fall. The quantities of wheat imported into Great Britain during the first six months of 1868, with the countries from whence received were:—

	Cwt.
Russia	4,489,880
Denmark	249,385
Prussia	2,213,473
Schleswig, Holstein and Lunenburg	32,270
Mecklenberg	371,416

Wheat has undergone a steady decline in the English market, amounting to 12s. per quarter since May 1. *Barley.*—The new crop has begun to arrive; about 8,000 bush. having been taken on the street within the past seven days; prices opened at 97 to 99c., advanced to $1.08 and $1.12, and declined, closing at $1.05 to $1.06. There is a good demand for all that is offered; it is now certain that our entire crop will meet with a ready sale, and that the prices will average about as high as in the years of the American war, when barley growers obtained prices that makes that period a memorable one to them. *Oats*—have been very

irregular and unsettled as to price. Sales were made of small lots as high as 80c., but at the close there were free sellers at 55c. but no buyers except for less money. The change does not result from any movement in outside markets, but is wholly the result of good supplies following extreme scarcity. *Peas.*—None.

Flour.—Receipts, 500 brls.; flour has ruled dull and closed fully 25 cents lower on superfine, the present quotation being nominally $6.75. During the week sales were made of 200 brls. at $6.50 on cars at Brantford, 100 brls. at $7.25 here, and 200 brls. from midge-proof wheat at $6.75; holders of strong bakers' flour ask $7.25, and probably could realize $7. Good extra is wanted at $7 for local use, and superior at $7.25; none of either grade offering. *Oatmeal*—firm; selling at retail at $6.50 to $6.75. *Bran*—$10 per ton by the carload.

Provisions.—Little doing in any article. *Butter*—Is firm and scarce at 16 to 18c. for store packed; 18 to 22c. for dairy, and 26c. for small rolls for retailing. *Cheese*—Firm at 10 to 10¼c. for export. *Eggs*—Selling in lots at 10 to 12c. In other provisions nothing doing.

Live Stock.—The market is fairly supplied; beef cattle sell at $6. to $6.50 for medium to choice, and $4.50 to $5.50 for inferior and common; a lot of 20 cattle sold at 4¾c., live weight. Sheep $3 to $5 each; lambs $1.50 to $2.50. Calves $5 per head.

Petroleum Trade of Pennsylvania.

The Titusvills *Herald's* monthly Petroleum report for the month ending July 31st, says: The production has been unsteady during the month, and large variations have taken place. For the greater part of the first week it remained unchanged, but from about the 7th it commenced to decrease, and on the 19th the total reached scarcely over 10,700 or 10,900 barrels. From the latter date until the close there was quite a rapid increase from striking new wells and torpedoing old ones.

The following table shows the total production for the month of July, the average per day, the production previously this year, and the average since January 1st:

Total shipments of crude for July of barrels, of 45 gallons each, bbls.....	327,413
Add to reduce to barrels of 43 gallons each, bbls.....	15,228
Total shipment of barrels of 43 gallons gach, bbls.....	342,641
Total stock, July 1st, bbls.....278,450	
Total stock August 1st, bbls...267,450	
Deduct decrease on August 1st, bbls...	11,000
Total production during July, bbls....	331,641
Average per day for 31 days, bbls 10,688	
Production previously this year, bbls..	1,689,565
Total production from January 1st to August 1st, bbls.....	2,021,206
Average per day for 213 days, bbls 9,489	

The annexed table shows the daily production on the 7th of each month from November 7th, 1867, to April 8th, 1868, the average per day for the twenty-three days ending April 30th, for the thirty-one days ending May 31st, and the average per day during May 30th and 31st, June 29th and 30th, and August 30th and 31st:

Average per day during July 30 and 31...	11,405

Stock of Petroleum in the Market.—The stock of petroleum in the producing regions on August 1st, was 267,450 barrels of forty-three gallons each. In this stock are included 231,450 barrels in iron tankage, five thousand in wooden storage tanks at Titusville and on the Hyde and Egbert Farm, and forty-one thousand in wooden tankage that are on the hands of producers, brokers, and shippers. Of the amount in iron takage, about sixty thousand barrels have been sold for delivery all this year, and thirty thousand are held by Cleveland refiners. Of the remainder about fifty-one thousand are in the hands of parties who tanked it, and seventy or eighty thousand are held by the different shippers in the tanks of the pipe companies and brokers.

As compared with the stock held on the 1st of July, that held on August 1st shows a reduction of eleven thousand barrels. The greater part of this reduction took place by shipments from iron tankage, the stock held at the wells having remained about the same as on July 1st.

The following table shows the total stock of petroleum and the amounts in iron tankage on the 7th of each month from November 7th to April 8th, and on May 1st, June 1st, and August 1st:—

	Am't in Iron Tankage.	Total Stock.
November 7, 1867, bbls	459,000	635,000
December 7, 1867, "	480,900	620,400
January 7, 1868, "	466,500	534,600
February 7, 1868, "	480,100	541,100
March 7, 1868, "	497,194	552,194
April 7, 1868, "	488,600	559,500
May 1, 1868, "	381,400	421,600
June 1, 1868, "	246,100	290,400
July 1, 1868, "	231,050	278,450
August 1, 1868, "	221,450	206,450

The Iron Tankage.—The capacity of iron tankage remains unchanged since our last report. There is but very little doing in the way of constructing tanks, and work has been suspended on three or four of those that were commenced during June and July. The total capacity, which is now 1,064,539 barrels, is more than large enough to supply any storage demand that may arise during the next three or four months. The capacity of empty tankage has been enlarged by ten thousand barrels, and on the first the capacity reached 843,089 barrels.

The Development.—The number of drilling wells is steadily increasing, and on August first the total reached three hundred and twenty-seven, being an increase of twenty-eight from the same date last month, and of seventy from the first of June. About one-half these wells are situated in the Upper Cherry Run and Pleasantville districts. Of these, between twenty-five and forty will be completed within the next thirty days, and, probably, as many more within the next sixty or seventy days. In all parts of the region large numbers of leases have been given, and operations have been commenced upon many of them, but on account of a scarcity of material, the work of drilling has been delayed. All the machine shops in the region are worked to their greatest capacity in turning out the apparatus for drilling, but the supply of the necessary materials is wholly inadequate to meet the demand. From this cause the number of drilling wells on August first was from seventy-five to one hundred smaller than it would have been if there had been a sufficient supply of material.

Fish and Fish Oils.

A late number of the Quebec *Gazette* has the following:—

Fish.—Several schooners have recently arrived from the lower St. Lawrence; but there are no arrivals of round lots to report, and prices remain unchanged. Unusual activity prevails in making preparations for prosecuting the trade in herrings, &c., &c.; and several schooners and brigantines have recently left this port and Montreal for the Labrador coast. The class of vessels employed in this service is better than usual, and several craft of large carrying capacity, have been chartered at remunerative rates to the owners.

Fish Oils.—Arrivals are confined to small lots by each schooner, and all descriptions selling at very fair rates; an impression prevailing that the supply this season will be below the average.

Albany Lumber Market Review.

The receipts have been large and stock is accumulating considerably, particularly of green lumber. The assortment in market is good. Sales have been fairly active, though but little has yet been purchased for winter stock. Prices are well maintained on most kinds, and if the present price of goods continues or increases an advance on pine is anticipated. Shipments have been pretty large with no difference in freights. Clear pine is selling at $57 to $60, and fourth quality $52 to $55.

Halifax Market.

Halifax, Aug. 12.

Since our last review we have no change to note in business. The past week has been the dullest of this dull season. The imports are light and the exports extremely small. The political excitement going on just now will militate against business and have an injurious effect upon the fall trade. Capitalists will be very cautious in investing or speculating until this excitement subsides.

Breadstuffs.—Flour, a further advance has taken place, and No. 1 Canada is worth $8.50 and holders are firm. Extra may be quoted at $8 70 to $8.80. We quote Extra State at $8 to $8.10. Baltimore (Howard Street) $8.30 to $8.50. Superfine $7.25 to $7.50. Common $6.25 to $6.50. Rye, quiet at $6.50 to $6.75. Cornmeal in fair demand at $4.50 for Halifax Ground; $4.90 to $5 for Kiln dried. Oatmeal in fair demand at $8 per bbl. for Nova Scotia and Canada. Imports for the week, 4443 bbls. flour, 922 bbls. corn meal, 100 bbls. oatmeal.

Exchange.—Bank Bills on London 60 days sight, 13½ per cent. prem.; Private Bills 12½ to 12¾ per cent. prem.; Gold Drafts on New York at sight 3½ per cent. prem.; Currency Drafts 29 to 30 per cent discount. Sight Drafts on Montreal 3½ per cent prem.; sight drafts on Newfoundland 5 per cent prem.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s Circular, dated Georgetown, Demerara, 8th July:

Sugar.—All offering has been bought up for the American Market, but there has not been much animation as during the previous month. The shipments for June were about equal between America and the United Kingdom, viz., 200 hhds. to each, the amount to come forward in July and August will be small, so that we are of opinion that rates will not go much lower it being likely that several buyers will be in the market. The quality has not been quite up to the mark the past fortnight, the wet weather making the juice much thinner, necessitating a longer period

The Wine Crop in France.

e *Salut Public* of Lyons says :—"The wine offers a splendid aspect almost everywhere, is magnificent in Burgundy, the Maçonnais rdmont, and Lyons country. In the vine-s of Beaujolais, the vine stocks literally bend ith the weight of the grapes, which at pre-have attained almost their full size, and have n to redden for the last few days. The rs are in high spirits ; and if slight showers great heat should alternate, as hitherto, there rounds for expecting a very superior yield in tity and in quality, as compared with that of ear ; and, besides, the vintage ground can ade a month earlier. We cannot deny, how-that the prolonged drought, and the extra-ary heat, have caused some damage in certain ters. In sandy and gravelly soils, many of grapes have been roasted by the sun. The ards of the Mount d'Or have particularly red in that respect, and rain is ardently long-r. In the South, the oidium, comparatively ensive in these districts, has caused serions

The Cattle Disease.

good deal of anxiety has been felt in connec-with a disease which has destroyed a good cattle in the Western States. It is there d by some the "Black Water" disease. A ment is also made on the authority of Hon. hristie, of Paris, Ont., that the disease had its appearance in that vicinity. We hope may prove to be a mistake ; the Dominion rnment have sent a special agent to examine the facts of the case. Respecting its nature peculiarities, the ollowing statement of facts been made to the Agricultural Department at ington :—"First, that the disease is con-nated from cattle from Texas, Florida, and portions of the Gulf Coast. Third, that the communicating it are not only apparently hy, but are generally improving in condition th—That while local herds receiving the in-on, nearly all die ; they never communicate disease to others. Fifth—That either a con-able increase in elevation, or a distance of two ree degrees of latitude from the startiug point, cessary to develope the virus into activity and ency ; and a further progress of two degrees itude, and a few weeks in time, is sufficient minate the poison from the system.—Sixth at Texas cattle removed to other miasmatic ons, as the Mississippi bottoms, up to the y-sixth parallel communicate no infection to herds. Seventh—Medication has thus far of no avail ; it concludes that this disease ot become general,—that it cannot exist only the movements of Texas cattle, which should gulated or suppressed, and that it does not t from travel, but from clinatic causes.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

The Canadian Land and Emigration COMPANY

Offers for sale at Cheap Rates, on condition of settlement,

FARM LOTS, IN DYSART,

And adjoining Townships, in the County of Peterborough.

THE greater portion of the Company's block of nine Townships is excellent farming land. The Judges at the Provincial Exhibition at London, in1865, awarded to the Company a Special Prize, and at Kingston, in 1867, a Diploma for the assortment of Farm Produce from their settlements. The country is well watered, healthy and picturesque. Dysart is a well settled Township, with mills, schools, &c., while stores, post-office, boarding-houses, &c., are established in the Village of Haliburton. There is also a rising settlement in the Township of Harcourt; and along the Peterson road the settler has a choice of good Farm Lots in no less than six Townships.

The communication to the Townships is good, a great part of it by Railroad and Steamboat.

The Bobcaygeou, Opeougo, Peterson, Mississippi, and Hastings Roads will all give access to the Company's block, but other roads are being opened up, giving a more direct communication with the County Town of Peterborough.

The Company has expended a considerable sum in the construction of Roads to and through its Townships, and has still a large appropriation for this purpose.

Dysart and adjoining Townships, the property of the Company, form one Municipality which cannot fail to make more rapid progress than any of the Municipalities in that section of the country, on account of the large sum levied every year from the Company.

For further information and particulars and conditions of sale, apply to the Secretary,

CHARLES JAS. BLOMFIELD,
Bank of Toronto Buildings, Toronto.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*; and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States, entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier. do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in fact for Policy-holder's heirs, or other purposes.

Phœnix Mutual Life Insurance Co.,
HARTFORD, CONN.

Accumulated Fund, $2,000,000, *Income*, $1,000,000.

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country, and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers intending assurors the following reasons, amongst others for preferring it to other companies:

It is purely Mutual It allows the Insured to travel and reside in any portion of the United States and Europe. It throws out almost all restriction on occupation from Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and all cash company. Its Dividends are declared annually and applied in reduction of Premium. Its Dividends are in every case on Premiums paid. The Dividends of the PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for each year the policy has been in force. The number of Dividends will always equal the outstanding Notes. It pays its losses promptly—during its existence never having contested a claim. It issues Policies for the benefit of Married Women beyond the reach of their husband's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting*, as it always allows the assured to surrender his Policy, should he desire, the Company giving a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceedingly low and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

Meetings.

ROYAL INSURANCE COMPANY.

The annual meeting of the shareholders of the Royal Insurance Company was held on the 6th August, at the company's offices, Royal Insurance Buildings, Liverpool. C. Turner, Esq., M.P., Chairman of the Board of Directors, presided; and the following Directors and Shareholders were present:—W. Smith, John Torr, R. Brocklebank, M. Bousfield, F. Maxwell, T. D. Hornby, Joseph Younghusband, Christopher Atkinson, C. J. Corbally, James Finlay, Robert Horsfall, D. Malcomson, C. Cruttenden, W. Cliff, W. Ravenscroft, Robert Roberts, Henry Hargreaves, Wm. Whatham, John Grierson, W. O. Carter, A. Baruchson, R. Alexander, Isaac Kitchin, Colonel Mawdsley, W. F. Arnitt, James Holme, G. Moore, Wm. M'Quie, and Wm. J. Powell, &c., &c.

The Actuary (Mr. Dove), read the circular calling the meeting, and the report of the Directors, which was as follows:—

REPORT FOR THE YEAR 1867.

The experience of Fire Insurance Companies generally for the three years preceding the year 1867, the transactions of which form the subject of the present report of your Directors, has been with rare exceptions such a record of unusual calamities by fires, many purely accidental, and not a few undoubtedly designed, that the first pause in the heavy ratio of losses which has prevailed, and the first indications of a possibly favorable change in the anticipations of the future, bring with them a sensation of relief.

The Royal Insurance Company has benefitted in full proportion both in the advantages of the actually improved result of the past year, and in the reasonable prospects of the present one.

Before passing to the special experience of this office during the last year, it may briefly be stated that the causes which have acted favorably on the accounts of the larger number of Insurance Companies in the United Kingdom during that period may be considered as almost entirely included in the following, viz.:—

1. The continued convictions obtained in the criminal courts in cases of clear and well proven acts of incendiarism.

2. The establishment of a moderate increase in the charges for insurance, according to their respective hazards, which are capable of modulation from time to time, as necessity shows cause, and the marked improvement in certain classes of risks consequent on the defensive action of the Insurance Companies.

3. The late severe commercial lessons, which teach that the establishment of new offices of insurance furnish even less fields than others for success, unless there be exercised in their formation far more matured views, and far more practical experience, than have been exhibited by the careless originators of new companies of all kinds, which have been brought into existence, and have sunk into annihilation, within the limits of the last four years; and

4. The foreshadowing of a coming Act for Judicial Investigation into suspicious fires, which, there are grounds to conclude, will be passed by the new Parliament, in its first session.

These observations serve to introduce the statistics to be now presented to the Company's.

FIRE BRANCH

The premiums received in the year 1867 amount to the sum of £460,533 14s. being an increase on the preceeding year of £13,282 12s.

As at the time these accounts were made up, viz., 31st December, 1867, the company had been established about 22¼ years, it will be sufficient to show its unmatched progress to refer back to the year 1856, the mid period of the company's existence. The premiums for that year were only £151,733, less than one-third of the sum collected under the same head in 1867.

The losses which have accrued in the year 1867 reach the sum of £292,125 0s. 2d.

It will serve to exhibit in favorable contrast the result of this year with the preceding one, to announce that the losses of the latter year reached the sum of £379,405 (a difference of no less an amount than £87,280) against the smaller amount of premium collected therein. The ratio of claims, therefore, on the present occasion is less by upwards of 20 per cent. of the premiums received in comparison with the year 1866, and, so far as those two years are concerned, shows a very satisfactory transition from a disastrous experience to one which exhibits a fair and satisfactory amount of profit.

The result of the year at the close of the books leaves, on account of the British and Foreign business, including interest, an amount to the credit of profit and loss of £43,286 1s. 6d., while a separate amount of profit on the American branch has been realized of £13,087 0s. 2d.

It, moreover, inhances the significance of this favorable change to report further, that an estimate made of the transactions of the first six months of the present year exhibits, proportionately for the time, an equal if not a still more satisfactory result. The continuance, however, of this amount of success cannot consistently be reckoned on, as while on the one hand the same ratio of profits might by a certain degree of probability be continued through the year, on the other hand, there is at least an equal if not a greater probability that at any time before its close undue anticipations of success may be rudely shaken, if not, indeed, wholly destroyed, by a series of losses which have happened in rapid succession many times in the late unpropitious years.

The report of the last year having indicated the remedial measures adopted by this company in consequence of the discovery of new elements of risk producing lamentable results to the country, and some portion of the present comparative exemption being fairly attributable thereto, a brief detail of the manner in which these measures have been carried out will not be unacceptable:

The increased rigour used in investigating proposals for insurance, then announced, has not been relaxed, and its advantageous results are now shown in a way that cannot well be controverted.

Almost every special risk in the company's books, old or new, has undergone a renewed and careful investigation, and the measure of risks involved has been tested by a fresh weighing of its relative importance.

It has been an equal object of desire in this laborious process to avoid in any one instance un-

necessarily to raise the rate of premium, as it has been to provide that no risk of unusual danger should be kept on the books that would not yield to the shareholders some moderate probability of reasonable profit.

That both these designs have been successful, admits of conclusive proof.

With regard to the first it may safely be affirmed that the popularity of the company throughout the world remains undiminished, and has not been in the slightest degree undermined by impolitic harshness in carrying out the indispensable requirements which have been adverted to. So much has this been the case, that the risks which have been withdrawn by insurers, in consequence of the needful correction of the rates, have (so far as the exigencies of the long-continued commercial pressure and the large reduction in the value of produce permitted, which have told upon all insurance business alike) been more than compensated by the influx of fresh insurance. The Royal has never had a larger body of constituents than now.

The ratio of increase of premium during the last two years, notwithstanding the conservative policy adopted, and the diminished price of commodities, shows unmistakably that the favor of the public has grown with the growth of the Company, and has not suffered even a temporary diminution from any cause whatever.

No happier announcement can be made to the shareholders than that which is contained in the following statement—that, notwithstanding the considerable augmentation of the annual premiums collected, the entire amount of the Company's risk is very considerably less than what it has been. The total amount assured will, in all probability, improve with the improvement of commerce, whilst its effect will be still further to increase the revenue of the Company.

The beneficial effects of the new investigations made into the business, item by item, can be shown by the tabulated results which have been systematically carried on so far as has been practicable.

The difficulties in the way of making this record entirely complete are of course insurmountable; yet, like the plan originated by this Company of tracing declined lives, it may with all its unavoidable imperfections, become of great use in the conduct of the business. The value of any instance traced of a loss avoided by cautionary measures, is not in itself diminished in the slightest degree by the fact that there must necessarily be always many other like cases which escape observation altogether.

The shareholders will be gratified to learn that the amounts of loss by fire distinctly traced have been escaped by risks declined by this office since the last year's meeting, reach the large sum of £72,811. This, be it remembered, is in addition to an amount of £40,000 announced at that time to have been saved in like manner. This large amount may, however, be considered exceptional in some respects, as it is not probable that the most diligent scrutiny will suffice at all times to discover more than a moderate per centage of the amount of declined risks ultimately resulting in fire.

The following is the report from the different branches of losses which have occurred from 1st August, 1867, to 30th July, 1868, on risks declined by the Company:—

In the Agency Department.....	£53,901
" Home "	960
" Foreign "	13,700
" Guarantee "	4,250
	£72,811

LIFE BRANCH.

The measures announced at the last meeting of the Shareholders detailing the regulations with respect to the projected increase in the proportion to profits to be given to participating Assurers, have already had a considerable effect on the Life Branch of the Company's business.

The fact that new participating assurances will now receive three-fourths of the Profits, instead of two-thirds, as heretofore, cannot fail to induce a large influx of fresh business from this time forward.

Notwithstanding that the commercial depression referred to has considerably interfered with Life Assurance as well as Fire Insurance throughout Great Britain and its dependencies, of which this Company has shared in the effects, the progress of this department has independently of this temporary obstruction, been highly satisfactory.

The average annual amount of New Sums Assured during the three expired years of the present quinquennial period (1865, '66 and '67), is £801,000. The annual average amount of new business for last quinquennial period (1859 '64), during which the Life business had made a most remarkable spring in advance, was yet only about £688,000, whilst in the preceding like period (1854, '59) it was only £331,000.

The Lives declined during the same three years (1855, '57), number 1163, the aggregate sum proposed for Assurance thereon being £638,484, a sufficient proof of care in selection.

The mortality for the last year has been moderate.

The increase of the Life and Annuity Funds in the year 1867, after paying every claim and every expense, reaches the sum of £128,583 5s 10d. The total amount of these Funds, it will now be seen, exceeds *One Million Sterling*.

In 1864, after appropriating the portion of profits of the preceding five years to the shareholders, the funds stood at.....	£621,434	15	4
In 1865, the amount invested for the year, after paying all claims and expenses, was.....	103,116	7	4
In 1866, do. do.	124,165	7	5
In 1867, do. do.	128,583	5	10
Whilst an estimate of the first six months of 1868 shows a credit balance of about.....	54,000	0	0
Total sums now invested on the Life account.....	£1,031,329	15	11

The annual increase, therefore, of the Life and Annuity Funds since the last Actarial Report in 1864 is £118,631 14s 6d, a most satisfactory augmentation, so far, of the Actuary's estimate of £100,000 annually for the ten years immediately following that year.

DIRECTORS.

The following Directors now retire, and are eligible for re-election:—

Thomas D. Anderson, Esq., Ralph Brocklebank, Esq., Michael Bousfield, Esq., Thomas Dever, Esq., David Malcomson, Esq., William J. Marrow Esq., Francis Maxwell, Esq., M. Hyslop Maxwell, Esq.

DIVIDEND AND BONUS.

The Directors propose to the proprietors that a dividend be declared of 3s per share, and a bonus of 4s per share, together 7s per share free of income tax.

The statements contained in this report are so satisfactory that the Directors feel they need not add a single argument further to commend them to the attention of the shareholders.

CHARLES TURNER,
Chairman.

August 6, 1868.

The Chairman, after the reading of the Report made some explanatory remarks. He said that they then met under more favorable circumstances than at any time within the past three years. The accounts for 1867 gave a fairly remunerative but not an excessive profit, which in view of the adverse circumstances under which they had laboured for the past three years, would be considered a very satisfactory state of affairs. After some further remarks of a general character, he alluded to the statement for the past y which he regarded as a most interesting one. profit and loss account stood thus:—There i the credit of the British and Foreign account £ 286, and American £13,087. Now the divid and bonus which is the same that we have bee the habit of paying will amount to £34,481; if we deduct that from the gross amount, we l a balance of £21,892 which will stand to the cr of profit and loss, after we have paid out of profits of 1867 a dividend and bonus of 7s. share. (Cheers.) Now, gentlemen, our Amer securities are on the whole in a pretty fair s but we thought that, as this was a prospe year, we should write off £4,000 as against American securities, which would leave the c of profit and loss £17,892 for the year 1 But the reserve fund is increased by interest cr ed £5,261. Therefore, in the total result, paying our dividend and bonus, the Royal li ance Company will be £23,153 better off at th of 1867 than it was at the end of the year 1 (Applause.) Well, gentlemen, on the who think that it is not an unsatisfactory state of af With the profit and loss account as I have st and with the reserve fund now standing at £ 174 that will make £140,066 as the amou profit and loss and reserve fund, after making deduction at the end of the year 1867. This an unsatisfactory result, but at the same ti don't wish to conceal from you at all that reserves should be more—considerably more they are at present. (Hear, hear.) But still are now mounting up; we have improved ou dition by £23,000 since the commencement year, besides paying the dividend. As respe Life business, the result is, I think, perhaps than ordinarily encouraging. The course you have pursued on the advice of our exc actuary to give the old and new assurers fourths instead of two-thirds of our profit been attended with very favourable re (Cheers.) We anticipated an increase of the ness, and the report will show that the an tions of our excellent manager and ac though they were thought rather sanguine time, have been more than fulfilled. Three ago the actuary expressed his opinion that c funds would be increased in the ratio of £1 a year for the next ten years. We have no three years of that period, and the average i in our life funds has been £118,316, exceedi estimate of our actuary by the amount of £ per annum. During the past year the incre been £128,000, while during the present y far as it has gone, as you will see by the re the first six months of 1868, the report sh credit balance of £54,000. (Cheers.) T think, gentlemen, is a very satisfactory s affairs, and I don't think that anything I say would increase your information on the s The Chairman concluded by moving the ac and printing of the report and statement counts.

Mr. John Torr (director), seconded the r He thought they might attribute the suc the Company to the steady, unwavering co tive policy they had adopted, and the un among the managers and agents of the Co which ever existed, tended strongly to th result.

The resolution, declaring a dividend an as mentioned in the report, was then adop

The retiring directors were re-elected as f Thomas D. Anderson, Esq., Ralph B bank, Esq., Michael Bousfield, Esq., Dever, Esq., David Malcomson, Esq., Wi Marrow, Esq., Francis Maxwell, Esq., M. Maxwell, Esq.

The retiring auditors, Joseph Youngh Esq., and Christopher Atkinson, Esq., elected, and their yearly remuneration i to £100 a year each.

Mr. Younghusband, in returning than that they (the auditors) had examined eve ment, every account, and every vouch

anking book and every security. There was not single doubtful or questionable security; and hey had not made a single bad debt—indeed, he elieved that they had not made a single bad debt ince the Company commenced business. (Cheers).

Mr. Atkinson commented on the satisfactory rrangement and order that prevailed in the Comany's offiee, and said that every security had assed through his hands, including the debts of ifferent properties in this country, and in Canda, and all their investments, loans, and securites on policies, and he believed them to be all horoughly sound and good. This must not only e gratifying to the shareholders, but encouraging o the customers of the Company, and to the poly-holders. He attributed the success of the ompany to its good management. (Cheers).

A resolution was then passed tendering the hanks of the meeting to the company's officers nd agents at home and abroad for their valuable ervices during the past year.

The Chairman then proposed the health of P. M. ove, Esq., the company's actuary.

Mr. Dove, after referring to the arduous period hrough which the company had passed and the evere labor that had fallen to his lot during he period of depression, continued—it is, however, well to understand that fire insurance will ever now satisfy any enlarged expectations of rofit, and it is better for the permanency of our stitution that it should not do so. (Hear, hear.) he larger attention which is now paid to the atistics of fires will enable the offices to apporion rates more closely to the true value of risks, nd there is a general tendency in the whole body offices to protect insurers from extravagant harges. (Cheers.) The "Royal" will not forfeit s now traditional character of liberality by failg to support this principle. The prospects of e Life Branch are of the most cheering characr. (Hear, hear.) This company now stands on e same platform with the very best among the any excellent institutions of the kind existing. heers.) The boon of an additional proportion the profits to the old assurers, which cannot herwise be regarded than as a voluntary act of nerosity, has given a favorable feeling, not only the recipients, but likewise to assurers in all rts of the world, and this department will, I nfidently hope, show happy results in its future story. (Cheers). Indeed it only requires the rmanent adoption of the lessons of prudence hich have fallen from the Chair, and then, by od's help, the Company will not, I trust, pause its future career. (Cheers).

The proceedings were concluded by a vote of anks to the chairman.

Dominion Telegraph Company.—The prosctus of this Company is issued. At a late meetg the following gentlemen were chosen as officers the Company in Toronto:—Hon. W. Cayley, esident; Hon. J. McMurrich, Treasurer; Messrs. ameron & McMichael, Solicitors; H. B. Reeve, cretary; Martin Ryan, General Superintendent.

Directors—Hon. J. McMurrich, of Bryce, McurrichCo.; Hon. M. C. Cameron, Provincial cretary; A. R. McMaster, of McMaster & ephews; James Michie, of Fulton, Michie & Co., d George Michie & Co.; L. Moffatt, of Moffatt, urray & Co.; A. M. Smith, of A. M. Smith & .; Hon. W. Cayley, Toronto; H. B. Reeve, oronto. Martin Ryan, Toronto. It is also conmplated to form local boards in Hamilton, St. tharines, &c.

$900,000 of seven per cent. Canada debentures aturing 1st proximo, will be redeemed at the ceiver General's office on that date.

An elevator has just been completed in Belleille; capacity, 45,000, and will load a vessel at rate of 2,000 bushels per hour.

Mining.

MADOC GOLD DISTRICT.

(From our own Correspondent.)

Belleville, Aug. 24, 1868.

The record of the Quinte mining district, since the middle of May, contains little else than a melancholy chronicle of disappointment; one disastrous failure succeeding another with such undeviating regularity, that the thermometer of public confidence, like the mercurial thermometer in January, kept sinking until it has reached several degrees below zero. Men failed to do that which they confidently asserted they could and would do. Machinery failed to extract the gold, for the collection of which it was constructed. "Quartz leads" failed to bear out the assays, which ascribed to them rich contents of gold and silver; and worst of all, mines failed to give profitable returns to those who worked them in good faith.

First, the returns from the Richardson Mine sank from $140 per ton, (the result of the first experimental crushing in Daniels, Scott & Co.'s mill), to $4.00 per ton in their own mill, with a loss of mercury of more than double the value of the gold extracted. Next the Wyckoff process was found to be quite inadequate to deal with the refractory ores of this region, and Daniels & Co, shut up their establishment. Turley & Gilbert's mill in which the reduction effected by the pan or grinding process, gave for some time better results; but having been sold to other parties, reports were circulated which impuuged the authenticity of the results obtained, and insinuated a wholesale system of salting; the consequence of which was that the mill lost the confidence of the miners, and came again into the possession of the original proprietors who are about removing it to another locality. Next the mill of the Bay State Company, of which such great things were predicted by its projector, Dr. Otway, failed in extracting the *colour* of gold either from the Richardson ore, or that of their own shaft; while scarcely a fraction of the quicksilver employed could be recovered. The mill of Mr. Berry, too, in the Township of Denbigh, although much superior in the completeness of its arrangements to any of the others, gave very poor results, and is now closed. The mill erected for Severn & Co., by Mr. Caldwell, in the 11th Concession of the Township of Marmora, was at work for a few days, with every prospect of a satisfactory return, when the front plate of the boiler blew out, fortunately without doing much damage beyond the stoppage of the work. The cleaning up, so far as they had gone, gave $20.00 to the ton. A new boiler has been purchased, and the mill will be at work again in a few days.

The Anglo-Saxon Company have got their works in running order at last. This is the most extensive concern yet established in the district. The machinery, which is a combination of the pan and Wyckoff apparatus, is of the most massive character, and is worked by a 75 horse power engine. No returns have as yet been made public; but I hear that some difficulty has been experienced from the clogging of the ore.

Several of the mines from which experimental crushings have been made in the Eldorado Mills, are loudly asserted to have been salted during the process; returns of from $10.00 to $30.00 having been given from rock which will not yield above $1.00 to $3.00, even by fire assay. This unworthy deception is said to have been practised not so much by mining speculators, as by tradesmen and tavern-keepers in the neighborhood, in order to keep up the excitement, and bring visitors to the villages, and customers to their establishments. From all I can learn, I fear there is too much truth in these reports.

The consequence of all this is, that confidence in the mines and mills has sunk to so low an ebb, that no one here is disposed to venture another dollar in mining stock, or mining adventure of any description.

As a climax to these mishaps, and to complete the general depression. The Richardson mine is now in the hands of the Sheriff, having been taken in execution last week. The debt of the Company exceeds $18,000.

Notwithstanding the prejudicial effect of these misfortunes, there are still some enterprising individuals, chiefly from the United States, who are resolute in trying to secure the profits which they believe are to be obtained by properly conducted enterprise in this district. Among others, Messrs. Jones & Co., from Fond du Lac, Wisconsin, are about to put up works upon Lot 23, in the 12th Concession of Hungerford, in which they mean to use the Stevens Flux. Some of the existing companies are also making such alterations in and additions to their apparatus, as they think may enable them to get out the gold which they firmly believe to exist within the limits of their respective claims; while others are turning their attention to the baser metals, and are forming Companies for working the veins of lead ores which are to be found in many places within the district.

Several new discoveries of gold-deposits of great apparent richness have also been made of late. In addition to those found in the 11th Concession of Marmora by Mr. Powell and Mr. Feigel, a mass of quartz has been developed on Lot 9, in the 6th Concession of the same Township which is said to exceed in richness all that has been yet found. Mr. W. Gilbert is about removing his mill from Eldorado to this Lot, and it will be worked at as early a date as possible. Mr. Jeremiah Loucks, of the same Township, has also got a quartz lead which has returned to assay by amalgamation $14.00 per ton. Quartz leads containing a promising show of visible gold have also been found on Lots 6 and 9, in the 3rd Concession of Elzevir.

In conclusion, though it has turned out exactly as I have always maintained, viz: that it is useless to expect that every vein of quartz or dolomite shall contain gold; or even that every true gold-bearing rock will yield the precious metal in paying quantity; yet there is every reason to believe that there do exist here and there in this district, beds of rock which contain deposits of ore of sufficient richness to afford a remunerative branch of industrial occupation to those who bring to their development the skill and the capital requisite to ensure commensurate returns.

NOVA SCOTIA GOLD MINING REVIEW.

We condense the following summary from the Halifax *Mining Gazette* for August:—

Sherbrooke.—Work is being vigorously prosecuted in this district. It is estimated that about 700 men are employed by the various companies. Steam mills (all Fifteen Stamps) are being erected by the Dominion, Wentworth, Canada and Meridian Companies; and Mr. Snow has commenced a large water-mill for the mines, under his management. The Dominion mill has a highly finished appearance. These, when completed, will make the number in the district eleven. In addition to the older companies the following are carrying on work to a considerable extent: the Chicago, Meridian, Kingston and Sherbrooke, Crescent, Delta, Stanley, Blue Lead, Canada, Woodbine, Caledonia, Cobourg and the Wentworth. The Crescent Company have found a new lead, 4½ feet thick, yielding 14 dwts. to the ton. Mr. Barnes is also sinking on the well-known "Root Hog" Lead.

The explorations on the Kingston and Sherbrooke Company's property, under Mr. Kirkpatrick's management, have brought to light a number of new leads. One of them, over a foot in thickness, shows visible gold in the various places in which it is being opened. A ton of quartz from the "Red Jacket" claims close to the west of the Russell, or Drysdale Block, yielded 12¾ ounces of gold.

Numerous gold-bearing leads have been opened on the northern part of the Wentworth property, and on five of them shafts are being sunk. Mr. Goodall is the manager of this Company.

The Woodbine Company are sinking several shafts, employing a large amount of labor and pressing on their works. A steam engine has been erected for the purpose of hoisting. Numerous buildings have also been erected.

The Caledonia property, which, with the Woodbine, is under the management of Mr. Brown, is also undergoing development.

The Cobourg Company are sinking shafts near the road on some promising leads.

The Meridian Company are pushing down their shaft on the Sears Lead—the manager, Mr. Goodall, intending, it is said, to cross out from this to the shafts further south, thus crossing the numerous leads of the Dominion Company.

The Metropolitan (formerly the Boulder), Dominion and Palmerston Companies, have resumed operations on the portions of that working which had been recently flooded. During the temporary stoppage, much new work has been done, and valuable developments made on different parts of their respective properties. Mr. Goodall, the manager of the Dominion mine, has sent to Montreal a bar of $7,000 and has yet on hand many hundred tons of rich ore, ready to be crushed.

The Wellington mine, under Mr. Snow, is sustaining its well-established reputation. A second shoot has been found in the main lead. This is another interesting proof that the ore shoots are repeated, and is of importance as showing that the Nova Scotia gold-bearing quartz veins will be found productive to great depths.

The Hayden and Derby (also under Mr. Snow's management) and the New York and Sherbrooke, (under its experienced manager, Mr. Zwickel) continue to prosecute their operations with success.

The veins in the two deepest shafts at the Canada (formerly known as Nova Scotia) mine, are increasing in thickness. The Blue Lead is being worked at the east end of the property. Mr. Barnes, the manager, has completed the new wharf, and a good road leading to it.

The Blue Lead Company have resumed operations, and are working two newly discovered veins containing visible gold. This property gives promise of good results, and with the Blue Lead shaft again in operation, will contribute to the yield of the district.

The large property belonging to the Stanley Company is being rapidly developed, under the management of Mr. Cook, and judging from present appearances, bids fair to become a paying mine.

The Chicago Company, for the past three months, have been prospecting their valuable property, and with good results. Shafts are now being sunk on several rich leads. Their mill, formerly known as the English Company's, has been entirely remodelled by the manager, Mr. Goodall.

Renfrew.—We have no special advices, but find the Ophir Company and Colonel Allan have passed through Messrs. Huse & Lowell's hands 638 ozs. 16 dwt. 18 grs. since last publication—a sufficient proof that the district is still productive.

Wine Harbor.—Our special report confirms the impression that this district is bound to revive, and the Commissioners returns show 367 ozs. 3 dwts. 14 grs. as the gold product of the past two months:—

The Provincial Company, under the management of Mr. Charles Eschweiller, are employing about forty men, and are obtaining very satisfactory results. The mine has lately been visited by the President, William Workman, Esq., Mayor of Montreal. He took back with him two bars containing $2,400 worth of gold, produced during his stay at the mine. The net profits of the month preceding amounted to about $3,000. It has been discovered that a valuable lead exists close to the mouth of the Hattie lode, and as this can be easily worked by means of shafts already sunk, great profits from this source are likely to be realized for some time to come.

At the Eureka Mine the Barrasois lodes have been struck, and a shaft is being sunk upon one of them. Another shaft is being put down on what is believed to be the Major Norton Lead. The vein is of a very promising character, and is widening rapidly. The Eureka Lode is thicker in the new shaft than in the old, and here also shews gold freely. The tunnel connecting the two shafts is approaching completion. This Company is also under Mr. Eschweiller's management.

In the Eldorado Company's tunnel, the new steam drill has got into operation, and is said to be quite successful, effecting a great saving in labor and time. An important lead has lately been discovered near the line between the property of this Company and that of the McIntosh. It comprises nearly ten feet of slate and quartz, the latter shewing many large specks of gold at the surface. Its position is north of the run of the Hattie lead.

The McIntosh and Stadacona Companies are carrying on operations on the Washington and Wiscasset leads. These companies have purchased the Victoria mill and water power.

A new group of leads has been discovered north of those worked by the Orient Company. One of them contains three feet of quartz. Westward they strike into the areas belonging to the Hon. Mr. Patton. The mill of this company is being refitted, and will be running again in a short time.

Oldham.—This district is steadily improving owing to the perseverance of Mr. Shaffer. The last crushing from his mine gives over two ounces to the ton, and the quartz now being taken out is still improving. Other lodes in the same district are being opened and doing well.

The English Company's crusher is now in new hands, who are fitting up some novel arrangements for saving gold, so that we may soon look for new developments.

The Caledonia Company are making some alterations in their mill and preparing to mine. This property is situated in the centre of the Oldham district, and on the anticlinal axis, and when a perpendicular shaft is put down to a sufficient depth, they expect to open some good lodes.

The Fish property has changed hands and continues an average yield. Lot 595 on the Barrel Lode, belonging to L. & W. Hall, produced 12 ozs. 7. dwts. 7 grs. from a recent crushing of 8 tons.

Montague.—The Montreal association have been making explorations on their property adjoining the locations of the Albion and Union Companies, and have met with very gratifying success. The operations of the Union Company are confined to a few men working on the Belt lode. Last month's yield was 120 ounces.

Uniacke.—The Uniacke Company of Boston have been getting 3 ounces to the ton from some of their quartz. The new boiler of the Alpha Company crusher has been fitted on its plan and the mill is again running. Another vein near the Mitchell Lead shewing a considerable amount of gold is being worked by this Company. Their shaft on what is supposed to be the Bunker Lead is yielding quartz containing coarse gold. The Montreal Association are employing only a few men. They are at present taking out good quartz from a lead over a foot thick, which had been left standing by some oversight in one of their old workings. Their mill has resumed work this week. The St. Lawrence Company are working a lead in which, and have exposed the vein in an open cut for a distance of about sixty feet, three to twenty feet in depth. The Union Company are sinking on two large leads within four feet of each other. The last crushing is said to have given two ounces to the ton. Mr. Barkner is still working an area adjoining, and continuing to raise equally good quartz. The Uniacke Central Company have some rich ore ready for crushing. The lead worked by the Prince of Wales Company is increasing at the rate of one inch for each five feet in going down.

The Queen Company are getting out a quantity of quartz shewing coarse gold for their new mill which is being pushed forward to completion. The building is up and the boiler and machinery already upon the ground. Since the late rains the mill of the Westlake Company has commenced running. The Company continue to add to their large stock of ore.

A new Company called the Eureka has been lately formed for working the property adjoining westward to the St Lawrence mine, and is placed under the management of Mr. S. D. Oakes.

The property which Mr. A. Michel is interested in exploring belongs to a Company formed in Montreal. It comprises 288 areas in one block, forming a perfect square, and is situated at the western extremity of the rich belt of the district, being about a mile and a quarter distant from the main developments. The property is, in part, limited to the Coxcomb Lake, and it is intersected to the west by the Windsor and Halifax road. In width it extends 3,600 feet on the course of the lodes, and 3,000 feet in depth or across. The work to date consists of 11,200 running feet of crosscut down to the bed-rock (consequently of varying depth), and in 48 openings. The trenches traverse the property from north to south, the principal one, which is the most easterly, having exposed 53 veins of quartz, of which the greater number have been retraced to the west by other trenches. Those 53 veins have been already all examined to the depth of 5 to 6 feet by means of an excavation made upon each; but as these veins are often disposed in groups a single excavation has sometimes sufficed for the examination of several. The quantity of rock extracted from the aforesaid excavations by means of powder, is 7,800 cubic feet. These exploratory works, trenches and excavations have required 985 days labor, the most being under the direct supervision of Mr. J. Touguoy, with whom we have reason to know Mr. Michel is well pleased.

Some specimens taken from the first twenty four veins, numbered from north to south, have been already submitted for tests to Dr. Dana Hayes State Assayer of Boston, and a quantity of gold per ton of $10, $12, $13, $20, $22, and $25, with the result of six assays, while three others only produced $2, $3, and $9. The results of the lodes numbered from 25 to 53 are not yet known. Mr. A. Michel is actively prosecuting the exploration by sinking further on the shafts which offer the greatest inducements.

This same Montreal Company owns also 32 areas in Montague district, and 132 areas at Lawrencetown. The exploration of those properties is entrusted to Professor H. Y. Hind, of Labrador and Saskatchewan Survey fame.

Lawrencetown.—This district is still attracting a great deal of attention, and mining interests are looking up. The Shanghai property has been sold in New York for $40,000, and fresh operations are to be forthwith commenced.

The Werner property is reported to have been purchased by two parties in England, the price being $54,000. The quartz, which is being mined and put through the mill, shews gold freely. The lead in Messrs. Glass and Strange's shaft is looking very well.

Important discoveries have been made upon the property of the Montreal Association, verifying in a remarkable manner Professor Hind's views in regard to the geological structure of the district. This property consists of 80 areas, and has been sufficiently developed to prove the existence of an almost inexhaustible supply of gold-bearing quartz.

—A meeting was held at Ottawa a few days since to consider the expediency of building waterworks in that city. After a good deal of discussion, it was resolved that it was inexpedient in the present state of the city finances for the City Council to undertake their construction.

European Assurance Society.

THURSDAY, AUGUST 27, 1868.

THE NORTHERN RAILWAY.

Toronto has a peculiar interest in the prosperity of this railway. While it brings timber, lumber, grain, flour and the etceteras of traffic into the city and carries back into a thriving section of country what our merchants have to sell, its steady increase of earnings under prudent management affords evidence from which success may be reasonably anticipated by the promoters of other railway enterprises intended to serve the splendid country lying to the north and west. The Great Western and Northern keep alive our faith in Canadian railways. We can rejoice, therefore, in the success of the Northern, for we know that a true spirit of enterprise has characterised its operations. Its increased earnings have furnished additional facilities to trade, and the efforts made in that direction have justified anticipations. The action of the London Board has been liberal. The report for 1867 explained how willingly sacrifices had been made by the postponement of payments on account of arrears of interest dividends, and how much assistance had been rendered through the negotiation of a temporary loan of £5,000 stg. Through this sacrifice the pressure of traffic has been, to a certain extent, relieved and although a great deal is yet to be done in the way of addition and extension to prevent embarrassment, the schemes now well in hand command themselves as most expedient. The line is chiefly dependent on freight for its revenue, and considerations of economy as well as the manifest wisdom of serving a rapidly extending and elastic traffic evidently impress the Management with the importance of keeping pace with the times. Such figures as these are refreshing:

Gross earnings—1859.....	$240,044	86
1860.....	332,967	01
1861.....	410,939	91
1862.....	406,238	02
Gross earnings—1863.....	406,606	55
1864.....	467,266	15
1865.....	506,748	58
1866.....	512,874	66
1867.....	561,370	25

In other words, the earnings have advanced during the last eight years about 135 per cent.

But we do not stop at 1867. For the half year ended June, 1868, the receipts amounted to $275,073 34, as against $271,406 55, being an increase of 2.81 per cent. over the corresponding period of 1867. The revenue available for dividend has amounted to $79,274, as against $75,335, and the interest dividends of both classes of bonds have been paid and a balance of $29,567 carried forward to credit of interest fund. It must be remembered too, that the exceptional security of last winter had an injurious effect on the traffic, while it increased the working expenses.

While we reflect on the progress made by this railway, we should also consider how fair its future seems. The Muskoka district, the settlements on the north shore of the Georgian Bay and the shores of Lake Huron and Superior with their mineral treasures, all young, all full of promise, will undoubtedly develope into fruitful districts, and supply ever increasing freights.

THE ROYAL INSURANCE COMPANY.

The report of this company for the year 1867, is given in another column with a synopsis of the proceedings at the late annual meeting of shareholders. The premiums of the year in the Fire branch amounted to the sum of £460,533, being an increase of £13,282. The losses reached £292,125. Increased vigour has been used in investigating proposals for insurance. Though special risks have been retested, and such rates exacted as the unusual danger justified, yet the influx of new business has more than compensated for the effects of the conservative policy adopted. Premiums have increased while the company's risks have been considerably lessened. The causes which have acted on the accounts of the English Insurance Companies are traced to the convictions obtained in cases of incendiarism, the establishment of a moderate increase in rates, and the better classes of risks thereby gained, the advantages enjoyed by staunch companies, over evanescent and carelessly managed companies, and the foreshadowing of a coming act for the judicial investigation into suspicious fires.

In the Life Branch the annual average amount of new business for the period 1865-6 and 7, is £861,000. The increase in the Life and Annuity Funds, after paying claims and expenses, reached the sum of £128,533, and the total amount of these funds exceeds one

million sterling. The mortality for the year has been moderate.

The satisfaction that pervaded the remarks made at the meeting, appears to have been fully justified. Soundness within the company, and activity and appreciation without were quite sufficient to provoke the brightest anticipations. The services of Mr. Dove, the highly esteemed Manager of the Company, were fittingly acknowledged, and a just tribute paid to his efforts in promoting the success of the institution.

WHO'S TO BLAME?

The water supply of Toronto for fire purposes has long been in an unsatisfactory state. It has at last degenerated into a tri-parte squabble—the parties to which are the City Council, the Fire department and the Water Company. Like an Irishman's feud which is revived on the occasion of subsequent spree, this quarrel breaks out anew after every fire. Fault-finding and recrimination are freely exchanged through the medium of the daily press, and then the matter again subsides into its wonted quiescence till the next conflagration gives fresh impetus to the "irrepressible conflict" between fire and water.

But this matter has a serious—a very serious aspect. The question just now is, who is responsible for the burning of Bell's house on the 16th. The first engine that arrived on the spot was attached to a hydrant which was out of order, causing a delay of twenty minutes, and also causing, according to Mr. Ashfield, the Chief Engineer of the Fire Department, the destruction of Mr. Bell's building. The matter being clear thus far, the question arises: Who is responsible for keeping the hydrants in repair? Respecting this, the Water Company say over the signature of their Superintendent:

"The Water Company do not consider that "they have anything whatever to do with "the hydrants, and had so notified the city "authorities, shortly before the fire referred "to. The fact that several of the hydrants "were out of repair was specially brought "under the notice of the authorities by the "Company, but nothing has been done to "remedy this defect."

The statement of the company is perhaps correct that it is not its duty *now* to keep the hydrants in repair. An Alderman is reported to have admitted this at a late meeting of the City Council. Whose duty then is it to attend to this important matter? Very little public attention is just now directed to the subject, but in case of an extensive fire, the delinquents would be called sharply to account. We repeat the enquiry—Who's to blame?

This affair should be settled—definitely and permanently settled, and at once. Perhaps it is unreasonable, accepting the popular view, to expect an Aldermanic body to settle anything except themselves, still we venture to implore them to give a little attention to this water question, and at least relieve us of the dread uncertainty of being all burnt out through a misunderstanding! The present state of things has lasted long enough; a change cannot come too soon.

MINING RIGHTS AND PRIVILEGES.*

It is interesting to review the conflicting opinions among text writers respecting the rights of the Crown to mines and minerals. Among the Romans, gold, silver and other precious metals usually belonged to the State, under the Civil Law, whilst all other minerals, mines and quarries belonged to the owner of the soil. Blackstone says the right to mines has its original from the King's prerogative of coinage, in order to supply him with materials, and, therefore, those mines which are properly royal, and to which the King is entitled when found, are only those of silver and gold. The rights of the French Crown relatively to the rights of the proprietors, were settled by ordinance of Charles VI. The payment of ten per cent. as a regalian right was exacted, and the enactment embraced not only gold and silver, but all mines and minerals. The commissions of the Governors of Canada, granted by the French Crown, enjoined them to search carefully for mines and minerals, reserving the tenth part of gold and silver, and giving them, as regards the other mines, "what might belong to them of the rights thereto," to sustain the local government. This is taken to show that an exclusive right to gold and silver mines was not claimed, but that the Crown merely reserved a certain regalian right, not as an impost or duty, but as a recognition of the sovereign authority. About 1677 the French Government was very liberal, or took little interest in the mineral resources of Canada, for Letters Patent were presented by the King to one De Lagny des Brigandieres, and we suppose "Germain Davin, essayeur et affineur," and others, set to work pursuant thereto, "de faire ouvrir les mines, minieres et mineraux, et purifier les metaux qui se peuvent trouver en ce pays."

We have on our statute book an act relating to gold mining,—17 & 28 Vic., c. 9, and the act of 1865 amending it. These are said to be based on the theory that when the proprietor of the soil is either unable or unwilling to work the mines, which may be discovered on his property, the Crown, from considerations of public policy, may concede the right to other persons. The patent granted by the Crown, which form the basis of all our western titles to land reserved, with very few exceptions, to the Crown all mines and minerals. The Mining Act, passed by the Legislature of Ontario, at its recent sitting, provides that the proprietors of all private lands heretofore granted, or which hereafter may be granted, situate within the mining divisions, shall have the right, against the Crown, to mine for gold and silver upon such lands, subject to royalty and the provisions of the act. The nominal appropriation by the Crown of alluvial digging has set at rest many questions that might have arisen with riparian proprietors. The acts above referred to are still in force in the Province of Quebec, but in Ontario the act passed last session substitutes new regulations in this province.

All necessary rights are comprised in a grant without which it would be useless. A lease of mines, or a proprietor's license to sink mines, carries with it a right to use as much of the surface as may be necessary for working the mines. Between a lease and a license there is a difference in effect. The former is exclusive of the rights of all others, the latter is not necessarily exclusive of the rights of the grantor who retains the right to work himself for the same minerals, or to license others to do so. The interest that a license purports to convey is what is known as an incorporeal freehold, and such an interest in land cannot be effectually created by an instrument not under seal. Where a license has been granted under circumstances which show that the personal skill or knowledge of the grantee is a material ingredient in the contract, the right cannot be assigned.

There are many other matters which, although of practical interest at the present time when mining operations attract so much attention we cannot notice, but for information regarding such we refer inquirers to Mr. Hart's useful work. It embodies the results of much study, yet its simplicity brings the subject within the grasp of laymen of ordinary intelligence.

*Practical suggestions on Mining Rights and Privileges in Canada, by A. M. Hart, Barrister at-Law of Lower Canada, and Counsellor-at-Law of New York. —Montreal: JOHN LOVELL.

GRAND TRUNK RAILWAY.

A communication which we publish, signed by a merchant of this City, respecting the freight arrangements of the Grand Trunk collates a number of facts that are worthy of the attention of those proprietors of the railway in England who are now seeking to place

s of the Company in a better position. act that American freight was, and is, carried *at a loss* is nothing new. Mr. ges, we think, has stated that more than in his reports. But we were not pre- for the extraordinary results which figures point to. Working for nothing, paying expenses is eschewed by most e as an undesirable way of spending time, but it seems to have fallen to the f our great railway to carry American actions nearly on these terms, trusting her sources to make good the adverse ce so created. This is justified by Mr. ges in this way : it is necessary to carry se low rates in order to get through t at all : this through freight cannot be nsed with ; the business must be retain- whatever cost, till the "temporary" ciation of American currency disappears, cannot be regained. Several questions here; are not the Company paying "too or their whistle?"—is the depreciation of ican currency likely to be any more porary" than the existence of the Grand k itself, if its credit be not improved, ould it not be better to do a small pay- usiness, for the time being, with less g stock and reduced annual outlay for lant and repairs to the permament way, to do a large non-paying business, in the increase of loss and of traffic go ner? It is these heavy through trains are especially trying on the permanent s well as on the rolling stock. More is wanted on these points.

MONTREAL vs. TORONTO.

e active efforts of the merchants of To- to head off Montreal in the trade with ern Canada, seem to have borne fruit. leading commercial organ of the east, Iontreal *Herald* displays commendable r in the following, which we extract that paper of Saturday last :—

ur own Province will be in a decidedly er position to meet its obligations than as last year, on account of the crops ing out so much superior, and although er Canada must be fully as well off as she was in 1867, it is very doubtful if ntreal will benefit in future so much by prosperity. It is quite natural for se doing business in the West, to con- as much of that trade as possible to r own territory, and we confess to have erved a most vigorous effort in Toronto revent so large a share of the trade so essary to the maintainance of Montreal coming beyond the first named place. attempt has not by any means failed ; the contrary, it has succeeded, perhaps degree which at first was hardly looked Lately Western merchants have been ulated by the low rates of through ght from Liverpool to Toronto; in not "a few cases, goods having been laid down "at their doors for less than was being paid "to this port. This, if only a comparatively "small advantage is one which will be made "use of against the trade of this port, and "while business here has ruled with unusual "quietness since last fall, it may be that what "has been taken from Montreal by compe- "tition has rendered it more depressing."

United States Chamber of Life Insurance.—An extra of the *Monitor* informs us that the Chamber met at Saratoga, August 19. Some discussion took place as to the propriety of requiring the data of policies *seriatim*, it being contended that a valuation by groups would answer every purpose. The rule, however, was allowed to stand. A Committee was appointed to nominate a suitable person for Actuary-in-Chief, and to name the salary to be attached to the office. This Committee will report in November. Some suggested $5,000 and others $10,000 as proper sums. After some other business the meeting adjourned.

Phenix Insurance Company.—In giving a list of Companies, last week, which do not intend to comply with the Insurance Act, we included the Phenix of Brooklyn. This we did from information furnished us which we learn proves to be incorrect. We now hear from the Toronto agent, Mr. C. G. Fortier, that the Company has no intention of withdrawing from the Dominion.

Communications.

WOODEN RAILWAYS.

The Editor Monetary Times.

Sir,—Some correspondence on the subject of "Wooden Railways," which was published in the Peterborough *Review*, for the information of those interested in opening up the rear of the County of Peterborough, was noticed a short time ago in your journal.

I have just returned from a visit to the Railway particularly referred to by my correspondent, Mr. Hulbert, and a short account of it may perhaps be of interest to your readers. The party consisted of Mr. Morris, M.P., Mr. Cartwright, M.P., Col. D. E. Boulton, Mr. George Kirkpatrick, of Kingston, and myself. I mention these names merely to shew that the subject of "Wooden Railways," for our undeveloped country, is now attracting some attention in different parts of Ontario.

The Wooden Railway commences on the Watertown Railway, 22 miles from Ogdensburgh, 2 miles past the De Kalb Junction. Its length is 24 miles to the Clifton Iron Mines, or mountain, which is in the Adirondack range, and in what is known as John Brown's Tract. In this distance it rises no less than 1,100 feet. There is hardly any cutting, but the road is carried clear up and over the hills. There are three or four grades of 285 feet in the mile, and one short pitch even over that. In place of earthwork, tresselwork is used to a very great extent, and this generally of a rude but strong construction—cross logs. The line is a particularly difficult one, and considerable engineering skill has been displayed, in the manner in which it has been carried over rapid streams and rocky ravines. Many of the curves are very sharp, and there is no great portion of the line—at least the part that we traversed—at all straight.

We commenced our journey near the neat little village of Hermon, and had about 19 miles of rail, and the chief rise in the road commences at that point. We travelled at a considerable disadvantage, the engine being a miserable affair, of a very weak constitution, with a small, upright boiler, two cylinders facing it, one of which we afterwards discovered was out of gear ; so with one lung gone, we were not surprised at its *wheezing* and panting as it breasted the tremendous hills. However, with two cars loaded with bricks and one with lime, we did manage to get safely up to the Iron mountain. There we found large steel works in the course of construction by a Company prepared with capital to the extent of $150,000. The ore, which contains from 65 to 70 per cent. of iron, is put in the furnaces, (like long box stoves), where it is "treated" with charcoal and blasts of carbon, and is turned out the purest steel. The Company expects to turn out about 50 tons per day. A Steel Rail manufactory is about to be erected shortly. These rails, which will be sold at a moderate price, will, in the estimation of Mr. Hulbert, before very long, supersede iron rails ; and it is in contemplation in the future to lay down the rails on the wooden road. The Iron Mountain is all iron, nearly pure ; no tunnelling or sinking shafts is necessary, the mountain has simply to be cut away. There are now about six different branches of the road striking into the mountain at various points. The upper part of the road, about 2½ miles from the mountain to the youthful village of Clifton, was completed about a year ago to bring the iron down to the smelting works which are there in full blast, and along this portion trains were run nearly all the winter. The furnace, which is of enormous thickness, is filled with iron and charcoal, in due proportions, to the height of 36 feet, where there is a platform conveniently opening out on the top of the bank, the furnace commencing at the bottom. The crusher is worked by water power ; it is a heavy iron wedge working at an angle against a fixed iron block. The wedge works on a pin, the bottom always in the same position, nearly close to the block, the top about a foot from the block, oscillating forwards and backwards. The ore is thrown in and is gradually crushed smaller and smaller, dropping with its own weight, until it falls out the right size—about that of a hen's egg. It appeared to me to be the best principle for a crusher, even for gold quartz, as it can be adjusted to any degree of fineness. The cost is about $1200 U. S. currency, and the machine would be an admirable one for crushing stones for macadamizing roads, saving time, money and human labor, generally considered of a degrading character. The "General" who was superintending the boiler shewed us their enormous charcoal houses, where they always keep a reserve of 300,000 bushels for emergencies. If charcoal can be used with such excellent results in both iron and steel works, cannot our Canadian capitalists be induced to put a little money into smelting works in this country ?

From Clifton we took with us about 25 tons of ore ; the grades being of course chiefly down hill, but some of them being ascents of 70 feet to the mile. With the new engine which Mr. Hulbert expects immediately, there is no doubt that he can take 50 tons with safety and at a fair rate of speed—eight or ten miles an hour. The day we were there, the General Superintendent of the Company authorised him to at once order several new engines and cars, which will enable him to take out 300 tons a day, besides the ore supplied to the steel works on the mountain. A good deal of ore is shipped by the Iron R. R. to different points for smelting.

The Company own about 74,000 acres. They supplied and are now supplying Mr. Hulbert with funds for construction of road and purchase of rolling stock ; Mr. Hulbert getting out the ore himself under an arrangement with the Company, paying a royalty and selling it himself.

We asked the Superintendents of the Steel Works and Iron Works, whether they were satisfied with the working of the road, they replied—"perfectly more powerful engines are only needed, and these are on their way."

The present engine, by the way, was hauled over a hilly country for 20 miles.

In the letters which you reprinted, a statement appeared giving a particulars of construction of the road to which I will refer your readers. The sleepers employed are not adzed. The notch for the rails is made by machine, the wedges; two at each notch, are made by an adapted shingle machine from the waste of the maple rails, which are easily sawn in an ordinary mill. Most of the rails that we saw were good, and the part that had been used for a year for heavy work had worn well. Mr. Hulbert gives the average "life" of a rail at five years. There is not the slightest difficulty in replacing the old rails with new. A few minutes suffice to unwedge the rail take it up and lay down and wedge up another. The rail cannot warp sideways being tightly notched in, every yard the wood being made to take the curve in a way that would be impossible with iron. The curves were pronounced to be beautifully laid. This road which was a particularly difficult and expensive one to make, was constructed at a cost of $7,000 U. S. currency, or $5,000 gold a mile, but in an ordinary country such a road can be laid down for much less. A short line of road which Mr. Hulbert made a few years ago was made for $4,000 a mile, and he is willing to contract to carry the Clifton road right through a mountainous country for 150 miles at $4,000 gold a mile. In a back country, north of Lake Ontario, rough in parts, but where wood is only too plentiful, it seems probable that a Wooden Railway can be laid down at from $2,000 to $3,000 a mile. We were all satisfied that a considerable traffic can be carried over such a road, that steeper grades and sharper curves can safely be made use of, that freight may be taken at the rate of about 10 and passengers about 20 miles an hour, without more risk than over an Iron Road. I may add that the rough passenger car that we rode in had no springs but the bumping was by no means severe.

Wooden Railways appear to me to be the very thing that are wanted in this country. I do not think that they will ever take the place of Iron Railways where capital can be obtained for either, but as feeders to the main line, and for the purpose of opening up the country, I believe they will be found to be of the greatest benefit. In our back country all the material is there at hand, and nothing is required but superintendence and labour; the labour is not of a specially skilled description, but is of just the kind to suit the inhabitants of the country, and the care of the railway can safely be entrusted to them, the repairs requiring much the same kind of work that they are in the habit of doing every day.

I must now no longer trespass on your space, but what I have written may, I hope, help still further to direct the attention of the public to a subject which I, in common with others, believe will prove of vast importance to this Canada of ours.

I am sir, yours truly,

CHARLES JAS. BLOMFIELD.

Toronto, Aug. 25, 1868.

GRAND TRUNK RAILWAY.

Editor Canadian Monetary Times.

SIR,—There has been a good deal said and written, both here and in England, in reference to the present position and management of the Grand Trunk Railroad, and I see it noticed they intend applying, or have applied, to the Government of Ontario for a grant of land, and to the Dominion Government for other assistance. This being the case, I think it desirable the public should know before such aid is granted the unjust policy this Company are now and have been pursuing towards this country in favor of the United States, and now lay before them the following facts in reference to the rates of freight charged:—

Rate from Chicago to Boston on flour and meal, Am cy		95c
Out of which road pays,		
Dockage and shipping in Chicago	3c	
Agent's wages, say	1c	
Boat from Chicago to Sarnia 25 per cent	24c	
Portland to Boston	12c	
		40c
Grand Trunk gets in Am cy		55c
Which is equal to 38½c gold, from Sarnia to Portland 798 miles, or less than ½c per ton per mile.		
Rate from Chicago to St. John, N.B.		$1 15
Dockage and shipping on flour and meal	3c	
Agents wages	1c	
Boat from Chicago to Sarnia 25 per cent	29c	
Portland to St. John, 20c gold	28c	
		61c
Grand Trunk gets in Am cy		54c.
Which is also less than ½c per ton per mile.		
Rate from Chicago to Toronto on flour and meal		50c
Dockage and shipping	3c	
Agents' wages	1c	
Boat from Chicago to Sarnia gets 49 per cent	24½c	
		28½c
Grand Trunk gets in Am cy		21½c
Which is equal to 14c gold, or less than 9-10c per ton per mile.		
Rates from Chicago to Montreal on flour and meal		79c
Out of which road pays,		
Dockage and shipping	3c	
Agents' wages	1c	
Boat from Chicago to Sarnia 29 per cent	20 3-10	
		24 3-10
Grand Trunk gets in Am cy		45 7-10
Which is equal to 32c gold, or less than 65-100c per ton per mile.		

Contrast the rates on Canadian productions to Toronto.

Sarnia to Toronto $35 per car, over 2c per ton per mile.

Stratford to Toronto, $28 per car, over 3c per ton per mile.

Guelph to Toronto, $21 per car, over 4¾c per ton per mile.

Brampton to Toronto, $15 75 per car, over 7½c per ton per mile.

The summer rate per tariff to Montreal from all stations west of Toronto is about 1½c per ton per mile, but as a great compliment, if you will not mention it, they will take grain from Stratford to Montreal for 15 cents per bushel, which is 1½c per ton per mile, but to Toronto they can make no reduction from the tariff. I do not say that the through rates to Montreal and Portland in Canadian productions are too high, for it is an acknowleged fact that no railroad can pay working expenses that does not get 1½c per ton per mile; but I do say the rates charged per ton per mile from all stations west to Toronto are exorbitant, and go to balance the loss on through freight from the United States.

Some time since they reduced these rates from here to Halifax and St. John, so they got about 1c per ton per mile to Portland; but from stations west where there is no water competition, they are still, I believe, getting 1½c per ton per mile. The question is asked every day why so many emigrants pass through to the West. The answer is "Land is cheaper there and the productions are worth more," as the cost of transportation to the seaboard is less than from the Province of Ontario, and carried by railroads built with British capital, and in which the producers of the United States have no interest except to get their productions carried at a loss to the road of 150 per cent, and to make this up they charge exorbitant rates on the productions of Ontario. The Grand Trunk freight trains from Sarnia to Portland, consist of fourteen cars for which they get $38.50 per car, or $539 per train; distance 798 miles. For the same number of cars from Sarnia to Toronto, distance only 168 miles, they get $490, or $ less than to Portland.

I could continue these calculations, but I think I have given sufficient to satisfy all what the Grand Trunk Railway is doing for Ontario. I will now show you how it stimulates trade with Halifax and St. John. I, among others, sugar and molasses consigned to me for sale from Halifax. The best rate of freight the Grand Trunk would give was 37½c per 100 lbs., the property put free on board of steamer at Halifax. When in New York last month I called at their office, and enquired what they would take sugar from New York to London, Out., for, and to my surprise found that they would take it for 50c (American currency) per 100 lbs. and do the lighterage themselves, which costs 5c per 100 lbs., which would leave the road 32c American currency, or 23c gold, which is 14c per 100 lbs. less for London from New York than to Toronto from Halifax. No wonder our merchants cannot get West India produce in Halifax, or the merchants there ship it here for sale by the Grand Trunk Railway.

It is amusing to see the calculation made in England, that a railroad should be worked for 60 per cent of its earnings. How can it be done if it costs 1½c per ton per mile, and the road gets less than ½c per ton per mile; or in other words the Grand Trunk gets 50c for what it costs them $1 to earn. Notwithstanding all this, the bondholders think the road should be worked for 60 per cent of its earnings; if so what an exorbitant rate of freight they must get on the productions of Ontario to make up the loss on American freight.

Your obedient servant,

T. C. CHISHOLM.

August 20, 1868.

PROVINCIAL INSURANCE COMPANY.

Editor of the Monetary Times.

SIR,—I have read your remarks on the annual statement of the "Provincial Insurance Co.," with much interest, and fully agree with you. In their statement, "Capital Subscribed," is put down at $470,760.

Referring to their advertisement in the *Evening Times* of this City. I find their "Subscribed Capital" put down in large figures at $1,743,000, a difference of something over $1,272,000.

Which figures are correct? Can you inform your readers?

Yours respectfully,

ENQUIRER.

Hamilton, August 22, 1868.

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

MONTREAL, AUGUST 25, 18

Financial.—Money continues very easy; the banks are anxious to discount, but there very little good paper offering, seven per cent the nominal price, but six has been taken in instances for unobjectionable bills. Owing lightness of imports, a great part of the usually employed in paying duties is now on the market, and as there is a total abs

peculation it is difficult to invest it for short ates. As I predicted, your silver combination as already pretty well fallen through ; Hamilton nd Ottawa have both relapsed and I expect To-onto will soon follow, these private combinations ever last long. Stocks of all sorts rule high and e in demand. Bank of Montreal has, however, eeded to 133½. Full quotations of stocks and nares will be found in our stock lists. The price f silver to-day is, buying 4½, selling 4¾. Green-acks buying 31¼ to 31½, selling 31 dis. Gold rafts, par. Exchange on New York, buying 31) 31¼, selling 30¾ dis.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There was a good average business done in tocks this week ; but the demand exceeds the upply.

Bank Stock.—There were sales of Montreal at 34½ to 135 the market closing at 134½. British offering at 104, with buyers at 103. Transac-ons in Ontario are reported at 98 to 98½, clos-ng with buyers and sellers at the latter rate. Ve have to quote an advance of three per cent. in oyal Canadian; considerable sales having taken lace at 85 to 85½. Commerce sold at 103½ to 103¾, nd is in great demand. Gore is held at 50. Merchants sold at 105 to 105½ and 106, and there a good demand. Molson's is wanted at 110. or City 102 would be paid ; none in market. u Peuple closed at 107½ ; the books are now osed for the payment of dividend on the 1st eptember. No Nationale in Market. There are uyers of Jacques Cartier at 106. Mechanics, nion, and Quebec nominal.

Debentures.—There were sales of Currency 5 per nts. at 90½, 90, and 89½. No sixes in market. ominion Stock is offered at par. Toronto are ill offering at rates to pay 7 per cent. interest. here were considerable sale of County at rates to ay abont 6½ per cent. interest.

Sundries.—City Gas sold at 105 and is in de-and. Building Society Stock is much sought for, ut none offered except some Freehold which sold 103 to 104. Montreal Telegraph is wanted at 33 to 135. Canada Landed Credit sold at 62 to 2½. A few good Mortgages were negociated at 8 per cent. There is a fair supply of money n good securities.

Insurance.

MONTREAL ASSURANCE COMPANY.

The following correspondence between this ompany and Mr. Harvey, of the Finance Depart-ent, will explain itself :—

MONTREAL ASSURANCE OFFICE,
Montreal, 21st July, 1868.

. HARVEY, Esq.,
Dept. of Minister of Finance, Ottawa.

SIR,—I duly received your circular letter, convey-ng copy of the Insurance Act of last Session. his Company was authorized to transact Fire nsurance business by the special ordinance of he Province of Lower Canada, 3rd & 4th Vic., ap. 37 ; Life and Marine business by the Act of he late Province of Canada, 6 Vic. cap. 22 ; and cean Marine, by the Act 13 & 14 Vic., cap. 41. his Company has never transacted any Life In-rance business; it withdrew its Fire Insurance usiness from the late Province of Canada West ree years ago, and that branch is now restricted o the Province of Quebec. Its Inland Marine usiness is confined to the Provinces of Ontario nd Quebec, these forming the late Province of anada, by the Legislature of which it was author-zed to transact that description of business. Un-er these circumstances, I am advised that it is not necessary that this Company should take out a license under the Act referred to.

I am, sir, your obedient servant,
(Signed), WM. MURRAY, Manager.

AUDIT OFFICE, OTTAWA,
July 23rd, 1868.

DEAR SIR,—In reply to your favor of the 21st, I have the honor to state that you are without doubt correctly advised, and that it is not necessary that for the transaction of the Insurance business specified in your letter, you should take out a license under our new law. Will you, however, allow me to add that the four Chief Ontario offices have deposited $17,000 each, and will receive their license on the first prox., and that it would be very pleasing to this department, were your office, and indeed, all Canadian offices, to fall in with the insurance policy of the Government. This would stengthen our hands in dealing with foreign Companies, and, perhaps, conduce more than any other step to the building up of a sound and strong insurance interest among ourselves.

I have the honor, to be, dear sir,
Your obedient servant,
(Signed), ARTHUR HARVEY.

To Wm. Murray, Esq., Manager Montreal Assurance Office, Montreal.

MONTREAL ASSURANCE OFFICE,
Montreal, 8th August, 1868.

ARTHUR HARVEY, Esq., Audit Office, Ottawa.

DEAR SIR,—I duly received your favor of the 23rd ult., which would have had my earlier attention but for absence from the city. Had this Company been transacting any business at the time, requiring a compliance with the Act, the deposit would, of course, have been made ; as it is it would afford the Directors pleasure to meet the views of the Department, could that be done without entailing the actual loss which would result from a transfer of the funds of the Company from present securities paying from eight to ten per cent into bonds returning but six per cent.

I observe that several foreign Companies have deposited various descriptions of securities, and if a similar course of proceeding on the part of this Company would be satisfactory to the Government, the directors would be happy to transfer the amount required, $50,000, in Montreal Bank stocks, reserving always power to draw the dividends on the same. Be good enough to advise me if this arrangement would be likely to answer, and oblige,

Dear sir, your obedient servant,
(Signed), WM. MURRAY, Manager.

REPORT OF THE CONNECTICUT INSURANCE COMMISSIONER.

We give below some extracts from this report which will be found interesting :

At the present time there are fifty-one Fire Insurance Companies incorporated by other States, doing business in this State under Certificates of Authority from this Department.

These institutions are sustained by capitals amounting to $18,400,000, and they have also in earned and unearned premiums, interest, &c., the further sum of $15,403,500, making in gross assets $33,808,590 all of which are held liable for insurances amounting to $1,921,481,127.

The severe losses of 1866 were not repeated in full measure last year, therefore Fire Insurance Companies now present a better state of finances, but losses are still very heavy, and some means should be devised to either diminish fires, or avoid insurances which seem now to be too freely taken.

It is now an established fact, that almost any city or compact town can establish water-works which will pay the interest on the cost, by furnishing water to water motors, for light machinery, leaving at the same time power by day, and especially by night, free for protection against fire, without cost.

In all cases where the water head creates power to a water hydrant, equal to a steam fire engine, such hydrant is equal to a fire engine, and better too, for it furnishes its own power and water, and saves the cost of the steamer, fuel, &c., besides the hydrant is always ready day or night, the instant the water is needed.

The gross receipts for premiums of the fifty-one Fire Insurance Companies doing business in this State, were for the year 1867, $21,425,764, and their losses paid amounted to $13,180,544.

The progress of life insurance is very rapid at the present time, indicating extraordinary activity on the part of solicitors and agents, to whom large allowances, as commissions and fees, for the services they render, are paid.

There are at the present time twenty-six life insurance companies incorporated by other States, doing business in this State, under certificates of authority from this department.

All but six have specific capitals, amounting to $2,390,000 ; their gross assets amount to the sum of $76,389,583, of which there is unrealized, in commuted commissions, dues from agents and premiums not yet collected, quarterly and semi-annual premiums not yet due, advance in the market value of U. S. securities and bonds and Stocks, in all, a sum not less than $24,748,200.

The liabilities of these companies for policies in force amount to $505,133,793, and their outstanding dividends, in various forms, amounts to over $20,000,000.

That these life insurance companies are sound and reliable, cannot be doubted ; that they will prosper, is almost equally certain, but such policy holders as believe that life insurance companies can be conducted and perpetuated without absorbing, annually, a part of the premiums paid in, either deceive themselves or allow others to do it.

It is true, that now and then losses will favor the company, by falling below the expected annual average ; but sooner or later losses will overtake the company, and each company should keep its accumulations advancing, in order to meet the mortality which time is sure to bring upon them.

The most favorable system of dividends for both the companies and the insured would seem to be that which leaves the dividends with the company, as an addition to the amounts insured, to become a part of the policy and payable with it.

In regard to the standard rates of interest to be adopted in making calculations for life insurance companies in the United States, but little need be said ; for while it is well known that six per cent per annum is the lowest legal standard of any State, and runs up to 10 per cent and more in many States, it is a retrograde movement to introduce English standards, or to try and drive American life insurance companies down to English rates of interest.

There seems to be a determination to force upon American life insurance companies the low standard of English life insurance tables, based upon four or five per cent of interest. Such an effort indicates a singular theory of financial affairs in the United States ; for though money is more plenty than ever before, the nation, the States, and most of the cities and towns are borrowers, and very little money is borrowed as low as six per cent per annum, and billions are and will be borrowed by the States, and by individuals on improved real estate, at rates varying from seven to ten per cent per annum : besides those who borrow at national banks pay at the rate of eight per cent per annum, including what is called exchange or undrawn deposits, and no moneyed corporation lends without the borrower pays the money taxes, be it lent to the State or to the individual borrower.

So long as the vast territory of the United States requires money, it will command a high rate of interest, and the attempt to adjust life insurance in this country on a basis of interest on money, common on the Island of Great Britain, where it is a drug, is as absurd as would be the attempt to adjust a republican form of government on the basis of crown titles and entailed estates.

It may be said comparatively, that while Great Britain is finished, the United States are but just commenced, and that money will command, for the next hundred years, on an average, not less than seven per cent per annum interest.

As a matter of course, the *less* the rates of interest, the *greater* the annual premium must be; and the *greater* the rate of interest, the *less* the premium fund, and the fund on which annuities rest.

Was not this last suggestion well founded, the largest life company in this State, and such companies as have followed (as far as they could) their example, could not practice life insurance so liberally. They avail themselves of the highest American standards and the best of security.

When the State of New York reduces its legal standard of interest down to five per cent per annum, and can fund its own debt at five per cent per annum, and other States and the nation can fund their debts at the same rate, it would seem reasonable to force life insurance companies down to that rate of interest in making computations, but such an event is so far in the future, as to exonerate any anxious official from all responsibility for the hereafter in this particular.

FIRE RECORD.

MONTREAL, Aug. 25.—I have only one fire to report, viz.: the out-buildings of three houses in St. Elizabeth Street; the back parts of two of the houses were seriously injured. The total damage will amount to about $4,000; the insurance was in the British America, but what that Office will lose is not yet ascertained.

INSURANCE DEPOSITS.—The Scottish Provincial Insurance Company has replaced the British three per cent. consolidated annuities, provisionally deposited with the Receiver General by a cash deposit of £10,309 5s sterling. A license has accordingly been issued bearing date July 31st. The London & Lancashire Life Assurance Company has a cash deposit of $50,171.93, and has received a license.

Railway News.

NORTHERN RAILWAY.—Traffic Receipts for week ending 15th August, 1868.

Passengers	$2,586 45

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

MONTREAL, 25th Aug., 1868.

Since my last, business in some branches shews signs of awakening activity, but, with the exception of Dry Goods, the fall trade will scarcely set in before the end of next month, and although the volume of business done in Canada may be equal to that of last year, still, I doubt if Montreal individually will do its usual amount. This is caused by the direct importations to the west being larger than usual, and Toronto is trying its best to secure as much as possible of the country trade which has usually been transacted here; freights and money have both been cheap, and your large merchants have always been jealous of our monopoly, so it would seem that they have taken a more than usually strong stand to wrest the western trade from Montreal, and their efforts must affect us to a certain extent, still, Montreal being the great monetary centre, the bulk of business must be transacted here. The weather for the last week has been hot and dry. This will enable farmers to secure their late crops in splendid condition.

Our PRODUCE market has been very quiet. Buyers and sellers differing widely in their estimate of values. Strong baker's flour has receded to $7.50, and a sale of 1000 brls., City brand, was made to-day, for September delivery at $5.75. Holders are anxious to work off their light stocks while prices continue high, having lost faith in their remaining so; the new flour, when brought forward, will find a comparatively empty market, and both buyers and sellers will be able to start from a new stand point, without any particular loss on either side in the way of accumulation of old stock. Nothing doing in wheat. Peas sell by the car at $1.50 per 60 lbs.; Oats at 53c. to 55c. per 32 lbs, and Corn at 81c. to 82c. per 56 lbs. for mixed western. These prices are nominal. For dairy produce, the demand for shipment continues. Butter is scarce, and commands readily 17c to 21c., according to quality; should the dry weather continue, I fear the price will rule high during the fall, as buyers from here have scoured most parts of the country, securing the farmer's present stocks, and also to a considerable extent their future make, at long prices. The demand for Cheese for shipment to England still continues, and all offering is readily picked up at 10 to 10¾ for factory. Were it not for Ashes, Butter and Cheese, our steamers would have to go light to Quebec to load deals, as there is nothing else in the way of freight offering. The rates of freight, at present are, to Liverpool—no grain—Pot ashes, 25s.; Pearls, 30s.; Butter, 45s.; Cheese, 35s.; to Glasgow, Butter and Cheese same as to Liverpool, Pots, 20s.; Pearls, 30s. I give receipts of flour here from 1st Jan. to 19th of August.

1867.	1868.	
280,256 brls.	297,536 brls.	Increase 17,280 brls.

Shipments of do. for same period.

1867.	1868.	
272,952 brls.	276,632 brls.	Increase 3,680 brls.

Groceries.—A lively business has been done in teas, the demand falling chiefly on uncolored Japans of medium to fine qualities, good Young Hysons, Gunpowders and Twankays, of the latter there is scarcely any on the market and full prices would be paid. Sales during the week amount to between 2,500 to 3000, half chests all sorts, and prices are well maintained. Rather more doing in sugar, but prices are scarcely so firm, 100 hhds. good Barbadoes sold to-day at 7⅞c, 7 to 8c. is about the range for common to good grocers' qualities. The refineries have not altered their rates. Tobaccos are quiet, but very firmly held, manufacturers finding it impossible to turn out goods at last spring prices, owing to an advance of nearly 100 per cent on leaf. A New York company are erecting a very large factory here and promise to drive an extensive business. It will be in operation in October. The demand for most other staples has been fair, and prices generally are well maintained.

Fuel—There is a strong feeling of anxiety as to the probable range of prices of this important article during the coming winter. Good U. C. maple is worth already $7 on the wharf, and although Lower Canada wood can be bought cheaper, still the quality is inferior and the length very irregular. It is to be hoped that the vast peat beds which exists in all parts of the province will ultimately reduce the price of fuel.

Dry Goods.—All the importers have now fully opened out their stocks, and although the fal importations have been comparatively light, stil the assortment is excellent. I give the import from 1st January to 30th June:

	1867.	1868.
Cottons	$2,082,397	$1,588,901
Woollens	1,791,824	1,183,861
Silks, &c	398,080	323,804
Total	$4,272,298	$3,696,566

Shewing a decrease of $1,175,732, or about 30 per cent. Could I give the figures for July and August the falling off would be still more marked The trade is likely to be a healthy one, prices o staples will rule firm, as they cannot be laid down below present rates. Prospects in England look bright for a large and healthy trade, which i always the case when provisions rule low. Th prices of cotton have also steadied, the marke having recovered from its extreme depression an manufacturers feel more confidence in operating this will give a better tone to our market. Remittances have been by no means satisfactory o late, but after the harvest, when money circulate more freely, a change for the better may be ex pected.

Toronto Market.

Large receipts of Barley during the week hav given a good deal of activity to the produce trade and caused a freer circulation of money. Th favorable effect on the general retail trade is espec ally noticeable. Judging from all the indicatior that have come to our notice, we think a mor favorable view is taken of the prospects of the fa trade than was entertained a fortnight since. Th early commencement made will favorably affect th aggregate result.

DRY GOODS.—Matters remain as reported la week. Very few buyers have yet visited th market; the trade must, however, soon commence

PRODUCE.—*Wheat.*—There were no receipts o wheat of any consequence, and the market is no bare with only a small local demand. Midge-pro was offered at $1.45, but loads of the same variet sold on the street at $1.32. Fall is offered at $1.5 no transactions. *Barley.*—A rough estimate plac the receipts for the week, by teams and by rail, 60,000 bush.; the shipments were 39,000 bushel Business has been principally confined to purchase of waggon loads on the street, where prices open at $1.04 to $105, and with slight fluctuations co tinued in the neighbourhood of these figures, fina ly closing at $1.05 to $1.06; several car lots so at $1.05. *Oats*—Steady and dull at 50 to 52 sales of cars at 50c. for new. Receipts 1,190 bus There is an abundant supply in market with on a small demand. *Peas.*—No receipts or stock

FLOUR.—Receipts 750 brls., and 500 brls. la week. The market is dull and nominal with on a small local business doing. There is no shippi demand. No. 1 superfine is nominal at $6.25 $6.50; extra $7; superior extra $7.25. *Oatme* —In small supply and selling in a retail way $6.50. *Bran*—$13 to $14 per ton at the mil

PROVISIONS, —*Butter*—Is scarce but the dema for export has slackened owing to the high pric asked by holders; from 17 to 20c. would now paid for good tub. *Cheese*—Firm with some dema at 10 to 10½c. with little doing. *Eggs*—In bet supply and selling wholesale at 10c. *Cutmeats.* No stocks; nominal.

FREIGHTS.—A number of vessels have be chartered to Oswego at 3½c. U. S. currency. T Baltic was chartered for Toledo on private term There is very little freights except barley a lumber, moving just now. The steamers runni to Montreal have had a dull season, and had to content with small profits. Freights by railw unchanged.

DETROIT AND MILWAUKEE RAILWAY.—T first mortgage bonds of this Company falling d May 15th, 1875, payable in New York, semi-a nual interest at seven per cent., are offered at and interest.

Halifax Market.

BREADSTUFFS, Aug. 18.—Canada Flour still nues firm at from $8.40 to 8.50 for No. 1, and 5 for extra; Extra State $8 to 8.10; Baltimore r $7.25 to 7.75; Baltimore Extra $8.25 to Rye dull at $6.50 to 6.75. Cornmeal has oved slightly since our last report, in consee of an advance in the States, and is firm at 0 to $5 for Kiln dried and $4.50 for fresh nd. Oatmeal unchanged at $8 for Canada. orts from 1st January to 18th August, 1867 1868:

	Bbls. Flour.	Bbls. Cornmeal.
1868.	107022	37321
1867.	104598	27957

WEST INDIA PRODUCE.—Although markets ad show a slight advance in sugars, it has not et affected prices here. The market is well plied, and an advance beyond quotations can ely be looked for. We quote: Vaccum Pan Porto Rico 6¼ to 6½c.; Cuba 5¾ to 6c.; Barbes 6 to 6½c. in bond. Molasses without change enfuegos 30 to 31c. Rum quiet—Demerara 51c.; St. Jago 43 to 44 in bond.

FINANCIAL.—Bank drawing rate on London 60 bills 13¼ per cent. prem.; private 12½ to 12⅝ cent. prem. New York Gold drafts at sight, per cent. prem. Currency drafts 27½ per cent. ount. Montreal sight drafts at 3½ per cent. l. Newfoundland sight drafts 5 per cent prem. *C. Hamilton & Co.'s Circular.*

St. John Market.

BREADSTUFFS.—August 18.—The market for remains quiet at about our last quotations. demand is small, confined principally to city ts; very light demand from the country. The ly, though small, is about equal to the de- l, and is now coming almost entirely from York. Strong brands of Canada flour are ted, but the price at present at Montreal is l to what could be got here for it. We do alter quotations from last week. Corn meal unchanged.

SUGAR AND MOLASSES.—Not much activity has displayed the past week, but holders are firm ir quotations. We note the arrival of a small o, principally of sugar from Barbadoes, this , which has not yet been discharged.

RECEIVER GENERAL'S OFFICE,
OTTAWA, 19th AUGUST, 1868.

for the security of Policyholders in the Dominion, and fully complied with the new Insurance Law, 31 Vic., cap. 48, have been licensed by the Minister of Finance to transact business in the Dominion, as required by said law.

GILLESPIE, MOFFATT & Co.,
Gen'l Agents for the Dominion of Canada
Montreal, 1st August, 1868. 52-5

CONSOLIDATION
OF THE
Bryant, Stratton and Odell Business College
AND TELEGRAPHIC INSTITUTE,
WITH THE
BRITISH AMERICAN COMMERCIAL COLLEGE,
Under the Management of
J. D. ODELL, AND EDWARD TROUT,
PROPRIETORS.

WHO having purchased from Messrs. Musgrove & Wright their interest and goodwill in the British American Commercial College, have succeeded in combining all the talent and securing all the advantages of both Schools, making the most extensive and complete institution of the kind in the Dominion, and the only one where the principles of actual business are successfully and practically taught.

Our rooms are extensive and complete, occupying separate buildings, and capable of accommodating 300 students. We employ a full corps of teachers, among whom are men of business experience, and the two **Premium Penmen of Canada.** Scholarships good in Montreal and in the principal cities of the United States.

For specimens of penmanship, circulars, &c., address,
50-tf. ODELL & TROUT.

Hartford Fire Insurance Company.
HARTFORD, CONN.

Cash Capital and Assets over Two Million Dollars.

$2,026,220.29.

CHARTERED 1810.

THIS old and reliable Company, having an established business in Canada of more than thirty years standing, has complied with the provisions of the new Insurance Act, and made a special deposit of

$100,000

with the Government for the security of policy-holders, and will continue to grant policies upon the same favorable terms as heretofore.

Specially low rates on first-class dwellings and farm property for a term of one or more years.

Losses as heretofore promptly and equitably adjusted.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

The Canadian Land and Emigration COMPANY

Offers for sale at Cheap Rates, on condition of settle ment,

FARM LOTS, IN DYSART,

And adjoining Townships, in the County of Peterborough.

THE greater portion of the Company's block of nine Townships is excellent farming land. The Judges at the Provincial Exhibition at London, in1865, awarded to the Company a Special Prize, and at Kingston, in 1867, a Diploma for the assortment of Farm Produce from their settlements. The country is well watered, healthy and picturesque. Dysart is a well settled Township, with mills, schools, &c., while stores, post-office, boarding- houses, &c., are established in the Village of Haliburton. There is also a rising settlement in the Township of Har- court; and along the Peterson road the settler has a choice of good Farm Lots in no less thau six Townships.

The communicatiou to the Townships is good, a great part of it by Railroad and Steamboat.

The Bobcaygeou, Opeongo, Peterson, Mississippi, and Hastings Roads will all give access to the Company's block, but other roads are being opened up, giving a more direct communication with the County Town of Peter- borough.

The Company has expended a considerable sum iu the construction of Roads to and through its Townships, and has still a large appropriation for this purpose.

Dysart and adjoining Townships, the property of the Company, form one Municipality which cannot fail to make more rapid progress than any of the Municipalities in that section of the country, on account of the large sum levied every year from the Company.

For further information and particulars and couditions of sale, apply to the Secretary,

CHARLES JAS. BLOMFIELD,
Bank of Toronto Buildings, Toronto.

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country, and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers to intending assurers the following reasons, amongst others for preferring it to other companies:

It is purely Mutual It allows the Insured to travel and reside in any portion of the United States and Europe. It throws out almost all restriction on occupation from Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and a cash company. Its Dividends are declared annually and applied in reduction of Premium. Its Dividends are in every case on Premiums paid. The Dividends of the PHŒNIX have averaged fifty per cent. yearly. In the settlement of Policies, a Dividend will be allowed for each year the policy has been in force. The number of Dividends will always equal the outstanding Notes. It pays its losses promptly—during its existence never having contested a claim. It Issues Policies for the benefit of Married Women beyond the reach of their husband's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting*, as it always allows the assured to surrender his Policy, should he desire, the Company giving a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceedingly low and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

Meetings.

WESTERN ASSURANCE COMPANY.

The seventeenth annual meeting of the shareholders of this company was held at their offices, Church street, on Tuesday the 1st September. The report of the Directors for the seven months, from 1st December, 1867 to 30th June, 1868, is as follows :—

In compliance with the decision of shareholders at the annual meeting in December last, changing the time for closing the office accounts and holding the annual meetings for the future in midsummer, the President and Directors have now much pleasure in placing before the shareholders full and explicit statements of the company's affairs on the business for the seven months ending 30th June, comprising, viz., the usual general statements of assets and liabilities with balance sheet, also auditors' report, which the Directors feel assured will be received with no ordinary degree of satisfaction. And in submitting the following brief abstract of figures taken from the official statements on the table, congratulate their co-shareholders on the high position the company has attained as shown in the largely increased business of the office accompanied at same time with profitable results.

The business for the seven months is as follows:

RECEIPTS.

Premium in the Fire Branch		$82,658 80
" Marine Branch		43,746 64
Interest account		2,459 77
Total receipts		$128,865 21

DISBURSEMENTS.

Losses in the Fire Branch	$43,150 49	
" Marine Branch	15,244 98	
Total loss		$58,395 47

Which includes an appropriation of $4,000 00 on two marine claims standing over unsettled in closing the accounts. One, a loss reported three days before 30th June; the other, a claim ordered for payment, but unsettled, being held under seizure by creditors. In the fire branch there are no claims against the company.

Re-assurance on Fire and Marine	$6,650 25	
General expenses, agents' commissions, and all other charges on the business	24,284 36	
Total disbursements.		$89,330 08
Leaving bal. in favor of Co.		$39,535 13
The assets of the company including $33,660 48 cash in bank, as per general statement, amount to	$155,669 29	
Less liabilities	6,759 51	
		$148,909 78

Which sum is represented by the following accounts :

Capital stock paid up	$75,100 00
Reserve Funds	50,000 00
Profit and loss account for bal at credit	23,809 78
	$148,909 78

A comparative statement submitted in last year's report for the past three years showed very forcibly the rapid increase of the company's business, and chiefly so in 1867, the premium receipts for that year amounting to $171,960 56.

Following up the comparison as between the past year and this for the corresponding period from 1st December to 30th June,

The premium receipts in 1867 were	$86,557 78
" " 1868 are	126,405 44

From these figures it will be seen that the anticipation of the Directors as to the progress of the company have been more than realized and the marked increase in the premium receipts is no doubt largely attributable to the prompt and liberal settlement of all claims, together with the good effect produced in the recent call on capital stock by affording additional security to the insured on the increased business.

Since closing the accounts at the 30th June, your Directors declared a divend of 5 per cent, on the seven months business, and further withdrew from the cash funds in bank the sum of $25,000, appropriated as follows :—

$17,000, the first instalment of deposit with Government under the late Insurance Act of the Dominion Legislature, and $8,000 invested in Dominion stock. Your Directors are well satisfied that the Insurance Act referred to, though moderate in its requirements is a move in the right direction, and well calculated to place the insurance business in Canada on a much safer basis than formerly. The Directors in closing their report unhesitatingly express their conviction that under the same continued watchfulness and attention to the company's interests, the future holds out the prospect of still further increasing the business with satisfactory results.

JOHN MCMURRICH, *President.*

Toronto, 1st September, 1868.

General Statement of the affairs of the Western Assurance Company of Canada for the period of seven months ending 30th June, 1868.

Assets.

Capital stock not called in		$300,000 00

Audited and approved—August 24th, 1868.
G. A. Barber, John Maughan.

Auditors' Report.—To the President and Directors of the Western Assurance Company.

Gentlemen,—We have respectfully to report that our audit of the books and financial affairs of the company, for the period commencing 1st December, 1867, and ending 30th June, 1868, has been this day completed.

As the results of that audit, we beg leave to submit herewith a statement of the assets and liabilities of the company, together with a statement of the profit and loss account at the 30th June. We accompany these *general* statements with several subordinate statements of certain particular accounts, made out more in detail, all the same having been duly audited by the several books of the company, and verified by the proper corresponding vouchers.

And having, in the progress of our audit, enjoyed the opportunity of reviewing the business of the company for the period referred to, in the marine as well as the fire department, it affords us much pleasure to congratulate the company upon the very marked success which have attended the past term of its transactions.

We remain, gentlemen, your obedient servants.
G. A. Barber, and John Maughan, Auditors.
Toronto, August 24th, 1868.

1 The Chairman moved, seconded by Chas. Robertson, Esq.,—That the report now read be received and adopted. Carried.

2 Moved by George Duggan, Esq., seconded by J. T. Smith. Esq.—That the thanks of the shareholders be presented to the President and Directors for their services and attention to the company's interests during the past year. Carried.

3 Moved by W. J. Macdonell, Esq., seconded by John Duggan, Esq.—That the President be requested to accept of $500, and the Vice-President of $300, for their valuable services rendered to the company since the last annual meeting.—Carried.

4 Moved by John Duggan, Esq., seconded by Chas. Robertson, Esq.—That the thanks of the meeting be given to the Secretary, assistant Secretary and officers of the company for their assiduity in the interests of the shareholders. Carried.

5 Moved by Angus Morrison, Esq., seconded by T. G. Wallis, Esq.—That Messrs. Robertson, Barber and Macdonell be the scrutineers for taking the poll for election of Directors to serve for the current year, and that the same be opened at 2 o'clock, to close at 4 o'clock; or if, after 3 o'clock, fifteen minutes should lapse and no votes recorded the poll to be then closed; and that the scrutineers be paid $6 each for their services. Carried.

The meeting then adjourned, and at 4 o'clock the scrutineers handed the following report:—

The undersigned scrutineers beg to report the election of the undernamed gentlemen as directors of the Western Assurance company for the current year:—Hon. J. McMurrich, Chas. Magrath, Esq., A. M. Smith, Esq., Robert Beaty, Esq., James Michie, Esq., John Fisken, Esq., Alex. Manning, Esq., N. Barnhart, Esq., and R. J. Dallas, Esq.

Report received and adopted.

A vote of thanks was then passed to Hon. J. McMurrich for his courteous manner and able conduct as chairman of the day's proceedings.

The meeting then adjourned.

Mining.

MADOC GOLD DISTRICT.

(From our own Correspondent.)

Belleville, Sept. 1st, 1868.

The attention of the mining interest in this quarter has centered, during the past week, on the doings of Richardson Company, and the efforts they are making to retrieve their position. At an adjourned meeting, held on Saturday, two proposals were made to the stockholders, viz., either to increase their capital stock by $100,000, raising the total amount to $400,000, or to issue preference shares, or more properly, mortgage bonds to an amount sufficient to cover their present indebtedness of $18,000, and to raise an extra sum to put their works into better condition, and pay working expenses, until the mine could be put into a state to make returns. It was also proposed to apply to the Local Legislature for an Act to empower the Directors to make such assessments on the shares as might be found necessary for these purposes in future. An adjourned meeting is to be held this afternoon (Tuesday), to determine which of the above plans shall be adopted. A large majority of the stockholders has agreed to support the Directors in endeavoring to obtain satisfactory results from this hitherto unfortunate undertaking.

Beyond this I have nothing to communicate. The reports of recent discoveries in Marmora and Elzevir are confirmed by many persons who have visited the several localities where gold has been found, and the parties who have secured interests in the same are preparing to test their value by actual work, on a sufficient scale to ensure accurate and reliable results.

THE ASCOT MINES.

The Hartford Smelting Works, Ascot, are reported to be doing a very good business. They have two furnaces in operation, turning out two and a half tons of 40 to 50 per cent. copper *mat* per day, using 40 tons of ore, and employing at the smelting works and the mine over 100 hands. One of the shafts at the mine is now 280 feet deep, and the vein of copper ten feet in width. The ore increases in richness as the shaft is sunk.

The *North American Mining & Smelting Company* at Capleton are running but one furnace at present, making about one and a half tons of *mat*, of a quality similar to the *Hartford*. At the smelting works and the mine they employ a 50 hands.

At the *Suffield* (silver) mine about 20 me at present employed in getting out and bre ore. The works for separating the silver fro ore are not yet in operation.

At the Goleonda (gold) mine nothing i doing.

We understand that a practical miner arri Sherbrooke last week, and has been for s days engaged in examining the gold mine o Magog River, in the interest of the stock-h of that company. This is the mine from Prof. Tuck announced the taking of over $ in about a week, a couple of years since. A or two ago one of the proprietors from New visited the locality, and spent a day o panning for gold with an experienced labore Chaudiere District, and we understand exp himself highly pleased with the result. has, no doubt, been a good deal of *salting* i nection with this mine, but we have hea perienced and reliable miners pronounce th of gold there as very rich. The company vested a good deal of capital in the concer if gold ore be found in paying quantities will be taken to obtain it.

Gen. Adams, who is at the head of the ford and Suffield Companies, with his tw deserves a great deal of credit for the pers and idomitable spirit which they have ex in developing the mining interests in Ascot. believe it may now be announced as a fact t Hartford Mining and Smelting Compan decided success, and may be considered an of the success of other companies, and tension of the mining interest in this se the Province. We think there cannot be that Ascot, Orford and several other Town this District are rich in mineral wealth. requires capital, skill and perseverance to d wealth from the bowels of the earth; to into circulation, and to encourage ever branch of industry. Heretofore, mining been entered into principally as a spec and there is too much reason to believe scrupulous and unprincipled men, perfectly less of the means adopted to fill their own and to deplete the pockets of others. T been the character of mining operation where. Sherbrooke and vicinity is not suffering in its reputation from the reckles ters of a few adventurers, who have impos the credulity of the public in these s operations. While this has been the gre of injury to the mining interests here, it suffered from the operations of parties w entered into this business without skill little prudence, and without sufficient c authorize the hope of success. The re been that after spending a few thousand commencing operations, they have bec couraged, and abandoned the work, w wealth which would have rewarded a ski persevering outlay, eluded their too eag Disappointed and disgusted they have, them, denounced all mining operation section as folly. So persistent and posit been the statements made and opinions by parties of this stamp that, were a re mine to be discovered, it would be very to get any attention paid to the subject however, will correct this evil. The working of one or two mines, will soo confidence. We believe the time is not f when the copper and silver, if not go lies buried in the earth in the Township will be brought to the surface in immens ties, and prove a source of wealth and to the population of the surrounding t —*Sherbrooke Gazette.*

It is said that the Hon. John Rose wil Washington shortly, on business conne the negotiation of the Reciprocity Treat

Insurance.

RE RECORD.—Sunnidale, Aug. 29.—A most trous fire occurred at this place. It originat- the woods and spreading to the village of idale eommitted great destruction. Among uildings destroyed were the passenger and t house of the Northern Railway, insured for ; shed and contents, $1,200; station agent's , $250; total, $2,300. The loss is equally ed between the British America, Imperial, ix, of London, Western and Provincial.

hburnham, Ont., Aug.—A Peterboro' paper that on the 15th inst, a house in Ashburn- used as a tavern, but not occupied at present elling of Mr. Mowry, but occupied by Mr. G. k, and Mr. John Clarke's tannery, and the es and sheds attached to all these buildings consumed by fire. The loss may be summed hus :—The tavern stables and shed about 00 ; owned by Joseph Sedgwick. Mr. ry's loss is about $1,500 ; insured for $1,000. Clark's loss he considered about $3,000 ; in- for $1,400 in the Royal and Ætna. Total bout $6,000 ; total insured, $2,400.

Harton, Aug.—A large barn belonging to Mr. ael Goetz, was struck by lightning and ly consumed, together with its entire contents, sting of the principal part of this season's st, and a lot of machinery and implements. ire spread with great rapidity, and no sooner he dreadful crash heard by those near, than hole barn was one sheet of flame. The pro- destroyed consisted of 500 bushels of fall t, 40 tons of hay, &c., &c. The loss is esti- d at over $3,000, and there is no insurance.

lle River, Ont., Aug. 31.—VanOrden's mill estroyed under very suspicious circumstances. or two arrests have since been made. Loss ; insured in Commercial Union for $1,000, n the Queen for $1,000.

John, N.B., Aug.—The steam saw mill of rs. Turtlott & Allingham was totally destroy- fire on Thursday evening. Insurance $8,000. ire is supposed to be the work of an incen-

derich, Aug. 31.—The Press dispatch says, nday a fire broke out in a large wooden on West street belonging to Dr. Gordon, of rich, and Thomas Robertson, of Dundas, and pied by W. Moss, shoemaker, B. McCormick, , Miss Taylor, milliner, Mr. Thompson, naker, and Mr. Sharp as a dwelling. The ing being old and dry, the flames spread ly, and in a short time communicated with rick North American hotel, kept by Andrew gh, which too fell a prey to the devouring s. No water could be procured for the en- but by the use of pails and zealous exertions e citizens the Bank of Montreal building on ast was saved. Several buildings on the op- e side of the street were fired, but promptly guished. The North American hotel was ed for $1,600 on building in the Provincial ance company, and for $500 on furniture in nto Mutual, which it is thought will fully Mr. Donogh's loss. Mr. Gordon had $500 ed on wooden block, but I cannot ascertain amount, if any, Mr. Robertson has on his on, the loss of occupants except Miss Taylor, be small, as most of their goods were saved, f course damaged. The fire is said to have nated in Miss Taylor's shop, but how is yet own. She places her loss at $800, and has ance of $700. Fortunately the wind was not g and happened to be in the right direction, ne-eighth of the town would undoubtedly been burnt.

w York Life.—The New York Life Insu- Company has made a deposit with the Go- nent, and has, we are informed, obtained the sary license to transact Life Insurance busi- in the Dominion of Canada.

Schooner Dunderberg.—This vessel, which sunk off Point an Barques some time since, was insured for $35,000, as follows: Home, of New York, $5,000; Western, of Buffalo, $5,000; Underwriters' Agency, $5,000; Detroit Fire and Marine, $5,000; Ætna, $10,000, and Home, of New Haven, $5,000. The eargo was covered as follows: Security, of New York, $15,000; Western, of Buffalo, $12,000; National, of Boston, $6,000; Republic, of Chicago, $5,000.

Montreal Water Works.—A Committee of the City Council, at a late meeting, recommended that the sum of $25,900 be appropriated for the construction of certain engine houses according to plans and specifications approved by the Committee. A further sum of $4,000 was voted for defraying certain expenses, and the contract let to Mr. John Donnelly at $24,315. At the same meeting the contract for the construction of a central fire station was awarded to James Howley & Co., for the sum of $4,600.

Halifax Fire Department.—The following figures, which we take from a Halifax paper, show the various amounts contributed by the Fire Insurance Companies to the revenue of that city during the years 1863, '64, 65 and '66 ; as also the sums paid by the city in support of the Fire Department during the same periods :—

Assessment paid by the various Insurance Companies :

In 1863,	$3,739 00
1864,	4,278 57
1865,	2,786 70
1866,	2,944 84
Total,	$13,749 11

The average being $3,437 28.

City Expenditure on account of the Fire Department :

In 1863,	$2,648 55
1864,	3,992 93
1865,	4,000 00
1866,	3,540 00
Total,	$14,181 48

The average being $3,545 27. It will thus be seen that the Insurance Companies alone nearly supported the Fire Department, the difference against them being only a little over $100.

IS FIRE UNDERWRITING A PROFITABLE BUSINESS.

Do fire insurance companies pay their stockholders remunerative dividends? Let us take the statistics of the New York insurance department. In the last three years the one hundred and sixty-four fire and fire-marine insurance companies which do business in that state, received $110,720,700.28 in premium receipts on fire and marine risks. Where did these one hundred and ten millions of dollars go? For payment of losses, $61,996,634.07 ; for agents' commissions, $13,091,936.49 ; for the tax iniquity, national, state and local, $5,986,870.97 ; for salaries and other management expenses, 15,650,210.33 ; total $111,519,470.20, or $798,769.93 *excess of disbursements over current receipts in a three years' business!* True, these companies paid $11,670,184 in dividends during this period—an average of $3,920,061 annually among one hundred and sixty-four companies. Now the total assets of these companies during these three years averaged $73,902,575, which, according to the figure just given, yielded only five and one-third per cent. in actual profits to stockholders. But these dividends were not obtained from the surplus earnings of the current business, the expenses of which exceeded the receipts from new transactions. They were only reached by appropriating the interest from the accumulated earnings of previous business, transacted during the period when fire underwriting was a prosperous occupation. In other words, in order to give the holders of insurance stock even a paltry interest upon the money invested therein, the directors of these companies had to borrow from the funds which legitimately belong to and should always remain in their reserved surplus. Increased business demands increased facilities. So it happens that insurance companies, to preserve themselves in safe condition, to afford adequate security to their policy holders, must either confine their business to fixed limits, or increase their surplus additions every year in the same ratios as they extend their operations. Companies which go on year after year, writing all the risks which they can get, without accumulating a corresponding increase of surplus assets, will very soon reach a crisis in their affairs when neither premium receipts nor interest receipts will suffice to liquidate their losses. It hardly requires the force of argument to prove that safety and prosperity alike urgently demand that not only shall past surplus reserves be preserved intact, but that the interest arising therefrom shall be applied every year to their further addition. The use of this interest fund to pay dividends can not be too severely reprehended. But when it is used, not only to pay dividends but to repair excess of current disbursements over current receipts, then we should hardly be able to find language to express our condemnation of the practice. A business so conducted as not to yield enough income to discharge current liabilities must be on the verge of immediate disaster. It is to this point that fire underwriting in the United States has finally reached, and, though there may be relief in a brief period of unusual prosperity, the law of average will soon assert itself, bringing, perhaps, untold and unparalled disasters.

That we may be able, not less to bring the importance and necessity of reform to the notice of insurance companies, than to illustrate the absurdity of the public prejudice against the existing rates of insurance, we present herewith an original analysis of insurance receipts and disbursements for the last three years, as compiled by us from the returns of the one hundred and sixty-four fire and fire-marine companies doing business in the state of New York:

INCOME.

	1865.	1866.
Fire premiums	$25,419,589 55	$32,281,404 76
Marine and inland premiums	4,188,652 78	6,586,087 51
Interest and rents	4,785,639 39	4,476,944 94
Miscellaneous receipts	131,865 08	168,548 77
Total cash income	$34,525,746 80	$43,512,985 98
Fire premiums	$36,162,138 45	$93,863,132 76
Marine and inland premiums	6,082,827 23	16,857,567 52
Interest and rent	4,752,841 58	14,015,425 91
Miscellaneous receipts	219,979 17	520,393 02
Total cash income	$47,217,786 43	$125,256,519 21

DISBURSEMENTS.

	1865.	1866.
Fire losses	$17,264,618 33	$23,913,745 87
Marine losses	3,422,417 08	6,020,945 10
Dividends	4,616,607 11	3,369,250 70
Commissions	3,323,687 59	4,805,407 34
Salaries	2,401,339 69	2,812,866 30
National taxes	873,992 97	1,039,746 04
State and local taxes,	909,755 97	955,844 19
All other expenses	2,020,782 70	2,321,327 70
Total disbursements	$34,833,201 44	$45,239,133 24
Total prem. receipts	$29,608,242 33	$38,867,492 27
Excess of disbursements, including dividends, over premium receipts	$5,224,959 11	$6,371.640 97
Dividends	$4,616,607 11	$3,369,250 70
Excess of losses and current expenses over prem. receipts	$1,608,352 00	$3,002,390 27

	1867.	Total.
Fire losses	$20,818,269 87	$61,996,634 07
Marine losses	5,350,456 17	14,793,818 35
Dividends	3,774,326 96	11,690,184 67
Commissions	4,962,842 56	13,091,936 49
Salaries	3,280,292 06	8,494,498 05
National taxes	1,209,259 42	3,122,998 43
State and local taxes,	998,272 38	2,863,872 54
All other expenses	2,813,601 88	7,155,712 28
Total disbursements	$43,207,320 30	$123,279,654 98
Total prem. receipts	$42,244,965 68	$110,720,700 28
Excess of disbursements, including dividends, over premium receipts	$962,354 62	$12,558,954 70
Dividends	3,774,326 96	11,760,184 77
Excess of losses and current expenses over prem. receipts		$798,769 93

The following calculation of per centages will be interesting in connection with the above tables:

Percentage of total losses to total premium receipts	9.93
Percentage of total commissions to total premium receipts	11.81
Percentage of total management expenses, exclusive of commissions and taxes, to total premium receipts	14.14
Percentage of total taxes to total premium receipts	5.14
Total	101.29
	100.00
Percentage of excess of current expenses to current receipts	1.29

Now the total average capital and surplus assets of these companies were $73,902,575.09. In calculating the per centage of dividend to stockholders we use these figures as principal. The total assets of a company are what that company uses in the transaction of its business. It is the amount of money employed for the protection of policy-holders, and, being actually thus used—the company liable constantly to its entire payment for losses—it is right that a calculation upon the basis of *total assets*, should determine the per centage of dividend. A dividend may be declared upon mere capital, but the dividend so declared represents the earnings, not only of the chartered capital, but of all other funds reserved in connection with that capital. Applying this rule, we discover that the total capital (chartered and reserve) of insurance companies, during the three years covered by the above statistics, yielded an average annual dividend of only five and one-third per cent!

The great and startling facts brought out by these figures are these:

1. That one hundred and sixty-four principal American insurance companies doing a fire and fire-marine business paid out during the years 1865, 1866, and 1867, *twelve and a half millions of dollars more than their current premium receipts.*

2. That the premium receipts of insurance companies are not adequate to pay their current expenses.

3. That of one hundred and twenty-five million dollars of total income for three years, less than two millions were preserved for surplus additions.

4. That the profit of the capital actually employed in the business was only five and one-third per cent.

5. That nearly five and one-half per cent. of the premium receipts of fire insurance companies, is absorbed by the tax imposition; in other words that the proportion of premium receipts saved for dividends is less than the amount thereof paid for taxes.

It is only by studying closely the experience of the past, and by applying the knowledge deducible from such study, that companies can fitly undertake future transactions. Their management involves greater skill and more constant prudence, because of greater hazard, than any other commercial or financial operation. Their business is subject to constantly varying conditions and the most powerful and sudden contingencies.

On the other hand their patrons are not less interested than are the companies themselves in the practical recognition of whatever demands shall be essential to the prosperity of insurance corporations. Insurance is valuable only when it is guaranteed by a company which adheres to safe methods of underwriting. It is obvious that a merchant can better afford to pay three or even four per cent. to a company which has always indemnified its policy holders, and which possesses an unimpaired capital, than one or two per cent. to a company whose integrity and ability are not fully above suspicion. What the insured pays when he purchases a policy of insurance is recovery from loss, and his policy, to be worth anything, must carry with it the assured and absolute certainty of indemnity in case of damage. But against any and all contingencies, fire is the ever constant contingency to which every property holder is subject; and insurance is the single and only adequate preserver and conservator of his fortune. But there are degrees of insurance. Unfortunately nothing is too sacred for the rapacity of audacious mankind; and, therefore, we find hundreds of unloosed penitentiary subjects swarming the land in the sheep-guise of insurance agents, and insurance presidents and insurance secretaries, confusing the public by the allurement of what is called cheap rates. To any reflecting mind the term suggests sufficient condemnation to repel patronage. A commodity to be called *cheap* must be either less valuable than the same commodity sold at a higher price, must cost less, or must afford its dealer less profit. Now what are the facts in relation to cheap insurance? We pointed out last month that the earnings of legitimate and honest insurance companies are, and have been for many years, less than the earnings of capital in any other occupation; and we have again shown in the figures exhibited above, that the interest returns of insurance capital are ridiculously and absurdly low. Certainly no man, much less any liberal business man, will insist, after viewing the deduction we have enumerated, that insurance companies can afford to continue a business which does not yield sufficient to pay current expenses. Hence a reduction of the existing rates of insurance is wholly out of the question. Not only that, but insurance companies must at once either devise some means to largely lessen their losses by fire, or considerable increase their rates. While the ordinary management and agency expenses of all our principal fire insurance companies have already settled to the lowest point of economy consistent with their vast and widely extended operations, it might be possible, without a further increase of rates in most localities, to reform the business *in the more writing of risks* (accepting only those that are free from *moral* hazard) so as to make the premium receipts adequate to the payment not only of all losses and expenses, but also of fair dividends to stockholders, leaving the entire interest receipts from capital and surplus unimpaired for the further accumulation of the companies' gross assets.

FAILURE OF A LIVE STOCK INSURANCE COMPANY.—The Hartford Live Stock Insurance Company, of Hartford, Conn., has been suspended. The company has sustained losses within the last twenty-two months of $410,000. The capital of the company is $150,000, $100,000 of which has been deposited with the Treasurer of Connecticut. The balance of $50,000 was kept by the company for working capital. The $100,000 in the Treasurer's hands will be used by the company for paying losses and unearned premiums. The Superintendent of the insurance department at Albany has notified the agents of the company in this State to take no more policies.

THURSDAY, SEPTEMBER 3, 1868.

TORONTO AS AN EMPORIUM OF TRADE.

It is admitted that trade flows in certain natural channels, and these it will seek despite every effort to divert it. Recognizing this axiom the shrewd business-man always seeks to place himself exactly in the current; or, in other words, to locate himself at the most favorable point for the successful prosecution of his operations. Success or failure often hinge on mere location, and a mistake in this respect has frequently terminated in disaster in spite of the most vigilant economy, perseverance and honesty.

New evidence is being daily afforded of the correctness of a wide-spread impression that Toronto is making marked progress in commercial importance. Many of these evidences are, to a certain extent, intangible, but for that none the less conclusive or convincing. Our inland position renders it a work peculiarly complicated to collect the figures which accurately represent our business and the annual increase of it; but still enough are forthcoming to point out unmistakably the fact just stated.

As an export market, Toronto is favorably situated. It is the point to which the surplus products of Ontario flow as naturally as the St. Lawrence to the Ocean. Once here these products can be sent to a half dozen leading markets on this continent with the greatest facility, or to Europe by either of the competing routes via New York or Montreal as the cost of freight and charges makes most desirable. The immense bulk of grain, lumber and timber that flows into this market, especially in the fall, induces a fleet of schooners to collect in our harbour, the competition among which cheapens freight to the lowest paying point. This enables our dealers to get what they have to ship laid down in American markets at less cost than their fellow dealers of the shipping towns either east or west. This is one of the reasons why higher prices are usually paid here for farm produce than at other markets no further distant from the great centres of population. But it is not the only reason; much larger lots are handled which permits of a smaller per centage of profit; time and wages, bank expenses, insurance and other charges are proportionately less, and besides a greater number of cargoes are turned over during the course of the season which admits of an aggregate profit large in amount. The sum credited to us under the head of exports rose steadily from $625,682 in 1858, to $2,478,292 in 1867, showing that our trade outward *has quadrupled within a decade.* We speak of the amount credited because a great part of our exports do not appear in the official accounts as exports from Toronto. Numerous large rafts of timber, for instance, which are towed down the lake and the St. Lawrence, are credited in the export returns of Montreal, or those of the Canadian Gibraltar a little further down-stream. So that while our export returns do not at all exhibit the entire volume of our trade, they do indicate the rate of increase, for it is fair to presume that the proportion credited in the way we have pointed out, is relatively the same from year to year.

The important flour trade with the markets of the Lower Provinces, was more largely done by Toronto last season than ever before. The Grand Trunk and Great Western Railways actively competed for this trade, (as they also did for the carriage of produce destined for Liverpool) one via Portland and the other via Boston, and this competition resulted in cheaper rates than had previously been obtained. Besides a steamer, *Her Majesty*, running direct between Toronto and Halifax and other ports of the Lower Provinces, carried a large amount and at rates of freight more favorable to shippers than are charged by the regular lines.

In respect of our imports, the account is not less flattering. They rose in value from $3,768,934, in 1858, to $7,352,335, last year, or nearly one hundred per cent. As in the case of exports, these figures, which are from the official returns, do not show the full value of all the imported goods received in this market. They merely represent the value of goods *entered* at Toronto in the books of the Custom House here, while it is undisputed that a considerable portion of the importations of Toronto merchants are passed through the Custom House at Montreal, and appear among the imports of that port. There are various reasons for this of a special character which it is not for us to point out; they are well understood by those in trade.

But the increase in our import trade is not more clearly shown by the figures just given than by the extension of our facilities for the storage and sale of all kinds of imported goods, and the marked increase in the number, and improvement in the commercial status of the houses engaged in this department. Some of the very best firms in London and Hamilton, whose names will at once recur to those at all familiar with the matter under notice, have permanently located themselves here; others whom we know of and of equally good standing, would do likewise only for a variety of obstacles connected with a change of situation. But the principal additions to our business firms have been from Montreal. Several leading establishments of that city have opened branches here; and others contemplate doing so as soon as our warehouse accommodation will permit.

It is because we intercept a large share of the trade which formerly went past us, that these changes are being made. We can now lay many classes of goods down from Liverpool as cheap as Montreal houses, and save distance, time and expenses to the Western dealer. These facts are indisputable. But those who want further proof can make enquiry of almost any country merchant, and they will soon be satisfied.

Frequent cases have come to our notice of dealers in Ontario who went to Montreal to make purchases, but returned to Toronto without buying a dollar's worth, and made their selections in our market. The bearing of such facts is unmistakable. They are deeply suggestive.

Toronto has made a long step in advance within the past twelvemonth. Real Estate has risen in value, and is now readily saleable at enhanced prices. Rents have risen 15 to 25 per cent., and houses are scarce. Should the proposed lines of railway leading into this city be constructed, as there is little reason to doubt they will be, we shall enter upon a period of progress of which the present is merely a foretaste. These roads will bring the productions of those fertile districts, intended to be served, directly into this market—a result which would give us daily receipts at least treble what they are now. Within five years, if all these enterprises go on, we expect our census returns to show a population of one hundred thousand. These grand results are plainly foreshadowed in the facts we have hinted at, and it is but for our citizens to show a liberal public spirit and exchange lethargy for enterprise to accelerate what must come at last—to give Toronto the position of the first city in the Dominion.

WESTERN ASSURANCE COMPANY.

A statement of the business of this Company for the seven months ended June 30th, appears in the report presented at the annual meeting held on the 1st instant. The gross fire premiums were $82,658.80 and the losses $43,150.49 or 52 per cent.; in the Marine Branch premiums $43,746.64, losses $15,244 or 34 2-5 per cent. The balance available was $39,535.13 out of which a dividend of five per cent was declared, and a sum of $25,000 was absorbed by the deposit of $17,000 with government and the investment of $8,000 in Dominion stock. The paid up capital is represented by Debentures $35,791.82, Mortgages $28,656.37, Building $16,000, which certainly are substantial looking assets. We are glad to notice that the Agents' Balances do not exceed $7,048.28, although, possibly, the Bills Receivable or the marine notes, are swollen in amount at the expense of the former item. We have already had occasion to notice a report of a company which professes to have $35,665 out in the precarious custody of agents, and we confess to little faith in such an asset.

A large increase in the business done, and a percentage of losses far below the average, justifies the Directors in hoping for continued prosperity, but an extended business requires greater security and we think it would have been well had the dividend of five per cent. been forgone. The present period of success should be made the best possible use of to fortify against darker days. The Company is undoubtedly doing too much business. We do not know whether this will be taken as complimentary or otherwise, but if the Directors desire to build up their interests on the broad basis of an unwavering public confidence they must adopt the spirit of the old adage, "cut your coat according to your cloth." The Company has back-bone, but it is quite possible to overload it. But we must defer further comment for the present.

THE HARVEST.

Returns, which have been published, from various parts of the country, east and west, indicate that the harvest now gathered in has, after all, been a fair average. Fall wheat suffered little damage from any cause and gives a large yield of excellent quality. Spring wheat suffered much, midge, weevil, rust, drought and the whole army of mishaps and nuisances have scourged it, so that we may not expect more than a two-thirds crop. Barley in many cases was stinted by heat and lack of moisture, but probably on the whole the thinness of the berry brought about in this way will be compensated by its beautiful bright color and thin s The color of this grain affects its valu much as its weight. Oats are a crop in the aggregate, though in s sections they were reported an entire ure; so dry was the weather that they not in some places grow higher than tw inches, a few light grains making up head. Peas in many places fell a victi bugs; drought also did its share of dam and there will only be half a crop. R are quite a failure; late sown may do s thing, if not potatoes will be a scarce modity before spring. Hay was a large having nearly advanced to maturity b the drought set in. Apples, plums, p &c., are doing fairly as is shewn by the supply now in the market at moderate pr small fruits were a failure.

Altogether we ought to be satisfied wit season's ingathering. Notwithstanding shortness of the yield of some articles, high prices now obtainable for all farm duce secure ample profits to producers.

THE PROVINCIAL INSURANCE C PANY.

As our statement respecting the mort given by this Company on its premises been questioned we now furnish some p nlars which are the result of a per investigation at the Registry office. stated that the mortgage was made Building Society. It now appears th was first made by the Company to an i dual and then assigned to a Building So The mortgage is dated 30th July, 1868 by a strange coincidence, the assignme also dated the 30th July, 1868. There w error in the amount of the mortgage. placed it at $6,000. We must apologis this error as the true amount was $8,00 yet remains to be explained what the sity was that occasioned such an extra ary proceeding in the face of a "net p of $35,549.

TORONTO WATER SUPPLY.

Some observations made a week a reference to the question of water supp fire purposes in this city, has called fo letter from the Superintendent of the Company. For this letter we request a ful perusal by our citizens. It gives a mary of the proceedings had in the mat dispute between the Corporation and pany, and traces it down to its present *quo*. The matter will, no doubt, r further ventilation. As it is, the amo the remuneration which the Company receive, seems to be open and unsettled so far as we have looked into the mat

rs that in addition to the awkwardness anger of the situation, the city is drift- nto a law-suit which will do no good t to the lawyers who have the manage- of the case. Why not settle the matter me way now, and avoid the expense of desirable an issue.

TO OUR READERS.

e many interesting communications pub- l in our columns prove, from the inquiry excite, the advantage of collecting the ience of various localities and obtaining ents or suggestions from different in- uals. Such communications provoke ht and stimulate research, besides add- the general stock of information. We nder obligations to the writers and we their numbers will increase as there is inclination on our part to extend court- all seeking or communicating inform- of common interest. There are many iduals connected with every department hich our pages are devoted who are capable of instructing their cōlaborers e we endcavor to fulfil our mission we at the same time, fairly ask the assist- of those whose opportunities furnish with facts which it would benefit all to ne acquainted with, or whose studies st solutions for problems in finance, in- ce and commerce which, as yet, are not tely settled. Our desire is to make paper as interesting as possible. We fore hope those friendly to our under- g will manifest their friendliness by ering the objects we have in view.

E manager of the Ætna Insurance Com- of Dublin writes us from that city in nce to our quotations of the stock of ompany, alleging that our figures are rect. In explanation, we have merely y that we correct our stock list weekly e prices given in the London *Economist* thers of the leading journals in Eng- which are regarded as reliable authori- on matters of this kind, and we cannot t the falsity of their quotations with- ndubitable proof. We, however, cheer- give the friendly letter of Mr. Innes in ner column that he may speak for himself.

Communications.

PROVINCIAL INS. CO.

of the Monetary Times.

,—As a stockholder in the Provincial Insur- Company, I beg to thank you for your to place this Company on a proper foot- My stock is not paid up and, like many s, I am loth to throw good money after What benefit is it to me to have affairs go on as they are? My liability is constantly staring me in the face. Were there any reasonable prospect of improvement I should not complain, but I am convinced, from the last Statement, that the present Management is wholly incompetent. If what I hear be true, respecting the delays in payment, the trivial excuses made from time to time, the complaints of agents and the old-fogy red tapeism that prevail, I say make a change or give up the ship. Mr. Crocker is not the man for the office he holds. I have heard some of the directors and many of the shareholders express the greatest contempt for his business capacity. I think he is kept there out of sheer pity. Well, pity is to be cultivated, but I certainly think that some consideration is due to those who have money invested in the concern. I, for one, want to know how I stand and endorse cordially your suggestion respecting an investigation.

Yours, &c.,
A SHAREHOLDER.

Toronto, August 29.

[We have little pity to spare for the writer of the above. If he did not think it worth his while to attend the late meeting and there give vent to his grievances, he should take the consequences. We think that there is every hope for the Company, but when its members show themselves negleetful, we are not prepared to do their work.—ED. C. M. T.]

"WHO'S TO BLAME?"

To the Editor of the Monetary Times.

SIR,—Your paper of the 27th inst., under the above pertinent interrogatory, contains an article on the Water Supply of this City, for fire purposes.

Reference through the public press to this subject has of late been so frequently made by me, I feel reluctaut to again reeur to it, but feeling the importance of the interests you represent, I am indueed as briefly as possible to refer again to the history of the Water Company, in its relationship with the City Corporation, in respect to the supply of water for fires, &e.

At the construetion of the Water Works of this City, when Toronto was confined to very narrow limits, the Water Company creeted a certain number of fire hydrants on their Works, which, up to the present time, have been used by the Fire Department. In an agreement of twenty-one years between the Water Company and the City (which agreement expired on the thirtieth June, 1864), the City was granted the right of ereeting as many more additional hydrants as they saw necessary, at their own expense, on any new Mains to be laid down by the Company, aud of which right the City availed themselves to the extent of the present establishment.

On the eve of the expiry of the above contract, namely, on the Twenty-ninth February, 1864, in answer to an enquiry of the Committee on Fire, Water and Gas, on the subject of the terms and conditions on which the Company would supply water for fires after the first of July of that year —when the old contract expired—a letter was addressed to the City Clerk, by the Clerk of the Water Company, containing, amongst other provisious, the following paragraph, as the basis on whieh the Company were willing to enter into a further negotiation with the City:

"The City to purchase from the Company the hydrants now belonging to the latter, at a valuatiou, and to assume the eutire *supervision*, *control*, and *repair* of all the hydrants."

An arbitration between the City and the Company soon followed the above communieation, but keeping in view only the amount of compensation which the Company should receeive for fire purposes alone, the Arbitrators in naming a yearly sum for the service which eould be determined by either party giving nine months' notice of their iutention so to do, elearly lost sight of the eonditions quoted in the above paragraph, and on the fulfilment of which alone the Company were induced to go into arbitration at all.

Amongst other reasons, from the repetition of the frequent statements and rumours from interested pparties, and taken up by the press as true, (almost at every fire,) of the cry—"No water in the Hydrants!"—no matter how long the serviee of turning on the high pressure had been performed by the Company's turncock, before the arrival of any engine on the spot, the Company felt it necessary to determine their agreement with the City on the 1st July last, and a letter, of which the following is a copy, was written by the Clerk of the Company to the Clerk of the City Counell.

Office Metropolitan Water Co.,
Sept. 25, 1867.

John Carr, Esq., City Clerk.

SIR,—I am instrueted to notify you that this Company will terminate the present arrangement with the city for water supply, for extinguishing fires, on the 30th day of June next.

I am, sir, yours, &e.,
(Sigued), JOHN EVANS,
Clerk Water Company.

Up to the 29th June of this year no satisfactory reply was had from the city authorities, and on this date the Company's Solieitor wrote the City Clerk, stating the sum which the Company would charge for the supply of water for the ensuing year, referring to the following proviso, "That the city at once become the purchasers of the twenty-eight hydrants belonging to the Company, the remaining sixty-one being already the property of the city, and assume the responsibility of turning the high pressure on and off as necessity may require. The fact of the fire hydrants of a city not being within the entire eontrol of the municipal authorities is exceptional, and in this instance, to make that control complete, the eity must undertake the management of the high-pressure valve. The police station, where a responsible officer is on duty day and night, being adjacent to the valve, this service can be effected promptly and efficiently by him. These two points are insisted upon, and will not be waived under any eireumstances, as they have heretofore, and will for all time to eome, (if allowed to remain in their present position), prove a most fruitful source of complaint and irritation between the Company and the city officials."

In answer to the letter of the Company's Solieitor, dated 29th June, and of which the above is a portion, the Company, on the 5th August, received a communication from the City Clerk, stating that the city were willing to refer the matter to arbitration. To this latter communication the Company's Solieitor had replied, viz: "That the Metropolitan Water Company are advised that the city authorities have, by their aets, *(i.e.)*, by having, sinee the expiration of the eontraet, on several occasions used the water for fire purposes, aecepted the terms contained in his letter of the 29th June, and that the same are binding upon them for the eurrent year, and consequently so far as the terms are eoncerned, there is nothing to arbitrate about; but with regard to the hydrants taken up by the city under the arrangement, the Company are prepared to name their arbitrator and proceed with the reference."

In order to avoid all collision with the city, or rather the Fire Department, I ask can anything be fairer on the part of the Water Company, or more compatible with the interests of the citizens at large, than the giving of the city authorities the entire control of their works, as far as it extends to fire purposes? Can any honest set of men, desiring that every inhabitant of this city should have the earliest and most ample supply of water in case of fire, through the hands of the paid officials of the city, refuse to adopt a course, in itself so appareutly beneficial in the activity which it is calculated to create in the Fire Department, which, in such case, would not, as heretofore,

have the alleged delay or inefficiency of the Water Company's officials as a loophole to escape by.

In conclusion, I beg to say in reference to the bugbear "street watering," that the Company make no contracts with the city for watering streets. The city authorities advertise for tenders for watering various sections of the city in the season, the tenders are taken up by various carters in the city who have to provide securities to the satisfaction of the city for the proper fulfilment of their duties, and who, if the city required of them, would also give additional security for the repairs of the hydrants, when put out of order by them, they being the parties alone responsible for any damage. The Water Company simply sell the contractors the water, on the understanding that they have the permission of the city authorities to use the hydrants, and in getting this permission the ratepayers are well aware that their share of the assessment for street watering would be increased six-fold if such permission were denied to the contractors, and that they were compelled to fetch their water from the bay. I can find persons in this city who will undertake to keep the whole of the hydrants in repair for one dollar each per annum, and it is a great pity the City Council allow both themselves and the citizens to be so unduly exercised by so very paltry an affair.

I am, sir, your obedient servant,

L. G. Bolster,
Sup. Met. W. W. Co.

Water Work's Office, Toronto,
29th August, 1858.

AMERICAN SILVER.

To the Editor Monetary Times.

Sir,—For the last month the newspapers of this country have been flooded with communications on this subject. First, with a grand flourish as the merchants in each town came into the combination to put silver below its proper value, and secondly, recording the secessions from the scheme, as the parties thereto found out the absurdity and impracticability of carrying it out. Doctors are said to kill oftener than they cure, which evil report against the profession probably arises from the malpractice of quacks, who, wanting in proper knowledge, impose upon the soft heads of the community. In the same way the currency may be likened to a profession ; but alas ! the educated doctors in it are few. Every man thinks that he understands the silver question and can remedy the evil at once, summarily and forever. However, when the infallible plan is tried it simply unsettles value for a few days and then is dropped ; the result of the experiment having been profit to the few and loss to the many. In the name of common sense I protest against these currency quacks being allowed to meddle any more with our silver circulation, which, if let alone, regulates itself according to supply and demand as justly and systematically as any other article of commerce.

The amount of silver capital in this country is estimated at $10,000,000, nearly all of which has been accumulated within the last five years. This amount, to a great extent, represents the profits that we made out of the necessities of the people of the United States during their war ; the representative in fact of an extreme value for all our productions. Let me ask whether the country is less prosperous now than it was before we received this accession to our wealth. Does not the improved financial position of every branch of industry in the country answer no ? The Americans, from whom we got this silver, have to rest content with a depreciated currency, worth only seventy cents in the dollar, while we wretched people complain of a currency which is depreciated only on account of its plentifulness ; a currency, the value of which is contained in itself, being *really* better value to the holder than notes of the Bank of England.

It stands to reason that a country which owns a floating capital of specie out of the power of the banks, lending institutions or anything in that nature,—a capital which, like labour, only enriches by active and useful employment,—a capital which never lies dead in stocks or bonds, but which is always being employed by thousands of small holders in every description of investment and enterprise, must be richer than one whose capital may be almost entirely drawn in by banks or individuals in seasons of commercial or agricultural depression..

At certain periods of the year the banks call in the largest part of their loans, and their money is, for the time, withdrawn from use ; but the silver is not withdrawn, but remains continually circulating without being influenced in any way by bank panics or withdrawals. People feel no uncertainty about the value which they own when they hold silver, but serious doubts sometimes arise in their minds about bank notes. Silver, at least, has the merit of being worth a certain absolute value, say ninety-five cents to the dollar, while bank bills, which compose the rest of the currency of our country, Canadian silver being but trifling in amount, are worth their face, or are not dependant altogether on the wisdom and prudence of managers and directors. Without in any way reflecting on the management of our banks, I hold that the $10,000,000 of absolute value in the hands of the people is better secured to the country than it would be if deposited in the banks, and the void filled by the promises to pay, of any chartered institution. I would strongly urge on the people of Canada to hold fast to their silver, which is worth so much an ounce all the world over, and is certainly better value than bank notes, which depend for their value on the uprightness and ability of managers and directors, and which may be rendered irredeemable any day by a panic in the commercial world.

Again, it is idle for any man to say that silver is not worth what it brings. Silver is, from its very excess, made an article of commerce, and is bought and sold as such. Each man who handles it receives it as a representative of a certain value to him, and if it is not the representative of the value he parted with, he was simply a fool to sell. Nothing can be clearer than this fact, and any man who states that he sells an article at a loss, because he is obliged to take silver at par, is a poor business man, to say the least of it, and would get his name in the *Gazette* if we had no other currency than gold.

The present silly attempt to set a value on an article of commerce like silver is almost entirely due to the retail merchants, and is simply an attempt to make more money than they are entitled to. If they have succeeded in getting, as in fact they are bound to get 10 per cent. on all silver they receive, they have been simply making from 4 to 5 per cent. on all that people have been fools enough to give them at that rate. Some pretence was made when the movement was initiated, that the silver would be exported, but that blind is now dropped, and the storekeepers are actually selling the silver which they receive at 10 per cent. to the brokers at 5 per cent. for large and 6½ per cent. for small. The brokers return the silver again to the country through the medium of the produce buyers, and the storekeepers expect that the farmers will give them another 4 or 5 per cent. profit on it. The wonder is that the dealers do not allow a little discount on their goods to any one that will pay them in silver. These facts need no comment.

The main evil with the storekeepers in this country is the long credit which they give and receive. A man commences business with a small capital, buys goods from the wholesale dealers at 4 or 6 months credit and sells them out again on an indefinite credit hoping to get his money, or rather the wholesale dealers money, back in time to meet his notes. The result generally is that their customers do not pay up in time, and then commences the "kicking against the pricks," which generally ends in the failure of the retail dealer and loss to the wholesale dealer. The storekeep is of course glad to get silver or anything tha will give him ready money and is forced to se goods too low for cash in order to stave off th demands of his creditors. If the retail dealer w in an independent position and could afford to pa cash for his goods, or at least a large portion them, he could then demand a price sufficient cover any loss incurred in taking silver at pa But until they do restrict themselves within the capital, or near it, they will always be paying t much for something, say butter, wheat, or an other article of produce for which they can g cash, as they do now for silver.

The wholesale merchants are on a different foo ing ; being independent they insist on receivi silver only at what it is worth to them, and thi suffer no loss by it. I feel satisfied that the ev which afflicts the retail merchant is not the silv which they take at par, but the practice they ha of pushing their business beyond their means, l which they lose their independence, and put it the power of the wholesale merchants to ov charge them for their goods, and in the power their customers to underpay them for their pu chases. If the young generation of Canada cou be brought to see that labor is fully as honorable trade, and that independence as a farmer or a m chanic is far preferable to the weary, drud ing dependence of the storekeeper. We wo have fewer complaints about an excessive silv currency, and certainly no organized attempt an overcrowded occupation, to impose a tax on t whole people for their sole profit and annoyan and loss to all others. Especially let us have Government interference in this matter. Silver an article of commerce, and its value is determi by supply and demand. This is a free count and no man is forced to take silver at more than is worth, nor should he be forced to sell it at l than it is worth. Government action or pat combinations will never settle the silver questi It can only be settled between man and ma Each person is at full liberty to take it or leav as he wills.

I am, &c.,

Hard Money

INSURANCE QUOTATIONS.

Editor Canadian Monetary Times.

Sir,—I observe in your paper that the share this Company are quoted at £1 10s. paid up, selling price £1. I beg to acquaint you that quotation is incorrect, inasmuch as no such of our shares has taken place at that price, they have always been disposed of at par, w sales have been effected.

Relying upon your kind offices to rectify mistake in the columns of your influential well conducted Journal,

I remain, Sir,
Yours faithfully,
John Innes,
Manage

The Etna Insurance Company (Limited),
46 & 47 Upper Sackville Street,
Dublin, 18th August, 1868.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Business in stocks was very limited last w there being little of any class of securities o market.

Bank Stock—There are buyers of Montre 133½ and sellers at 134 ; no sales. No Briti market. Sales of Ontario are reported at 98½ and 99½, and it is now offering at the latter No Toronto in market ; buyers would give There are buyers of Royal Canadian at 84

very little offering. Sales of Commerce, partiaid, occurred at 103 and of fully paid at 103½ 4. Buyers offer 36 to 37 for Gore, but there are llers at these rates. Merchant's sold at 106 s now offered at 106½. Quebec is offered at No Molson's in Market; buyers offer 110. is enquired for at 102 to 102½. Du Peuple be placed at 105, ex dividend. Jacques er is offered at 108 with buyers at 106½. n could be sold at 102. Other Banks nominal.

entures.—No Canada Sterling Bonds in Mar-Dominion sixes are in demand at 100 to 100½; nion Stock is wanted at par, none offering 101. Toronto are offering at rates to pay 7 per cent. interest. County are wanted; a e offering at very high rates.

dries.—City Gas sold at 104½ to 105, and it v in demand at the latter rate. There were sales of British America Assurance at 56, till procurable at that figure. Canada Permt Building Society is freely bid for at without inducing holders to sell. There small sales of Western Canada at 109½, and round lot 110 would be paid. Freehold also o a small extent at 104; very little to be had. rcal Telegraph is procurable at 134. Holders 2 to 63 for Canada Landed Credit, ex dividend. ood Mortgages are offering. Money is in demand, and is readily obtainable on first paper.

MONTREAL MONEY MARKET.

(From our own Correspondent).

MONTREAL, Sept. 1, 1868.

ave very little to add to my remarks of last The money market is very easy, ll good paper, of which there is very offering, is freely taken by the banks to 8 per cent; street prices range from o 16 per cent. The comparatively light ut of money paid for duties (owing to light ts), has thrown a considerable amount of l on the market, seeking short date investwhich are difficult to find. Prices of bank s rule high. Bank of Montreal, 133½ to 134. Bank, 102. Peoples' Bank, sales at 105, rs now asking 106. Merchants' sold at 106, cent more now asked. Ontario, steady at 99. Bank of Toronto, 115. Gore Bank t 46. Little doing in railroad and mining s, but prices are steady. You will have of Mr. Jones, a money and exchange broker, g absconded. What his total liabilities are t yet ascertained. I believe the Ontario is the heaviest sufferer. Nearly all the y brokers are more or less bitten. Very litange in gold, and no speculation for either r fall. Silver is unchanged. I see your to merchants are wavering in their alle- to the combination. It has fallen through r than even I expected.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, 1st Sept., 1868.

are now entering on the month in which ll trade in every department of business may rly expected to commence. From the 20th st to the end of September is the season of ty for the dry goods trade, and from the e of September to the end of October is the period of all other branches. Thanks to the l Trunk railway, we have not the same hurry y we used to have before that line was built, all business closed with the close of navigaow to a large extent it can be carried on gh the winter. It is almost impossible to ate the benefits of this railroad to Montreal, and much as we may cavil at the lavish expenditure incurred in building it and carp at the extravagant manner in which it is managed, still we cannot shut our eyes to the fact that it is now a *necessity*, and must be supported *coute qui coute;* the only question now is how it can be worked in the cheapest and yet most efficient manner. The faults of its management are patent to all, overpaid and over-numerous high officials, underpaid and insufficient staff of underlings, faulty system in the freight department, constant accumulations of freight waggons at stations where they are not wanted, and scarcity of them at points where they are required, general badness of the track, dirty, illventilated passenger cars, with a great insufficiency of vehicles suitable for carrying the number of emigrants constantly passing over the line, the utter want of attention to the respectability, comfort and cleanliness of poor travellers; these and other serious abuses are the defects in the management of the Grand Trunk, yet, still, as I said before, the line is a *necessity* and the public should insist that the present mismanagement be altered, or that Government, which had so much to do in building the line, should see to its proper working. The prevalent opinion in Montreal is that the next session of Parliament will be a very stormy one and a great number of important measures, such as those regarding the tariff, currency, railroads, immigration, &c., will be only cursorily touched upon and be then shoved on one side to make room for the paramount question, the consolidation of the Dominion.

The weather during the week has been very fluctuating, some very hot days and nights and some heavy rains, succeeded by cold; altogether it has been favorable for agricultural pursuits. In the county of Argenteuil, farmers have very long faces, the oats and peas, (the staple crops), being quite a failure. The different cheese factories are now closed for the season, the weather being cool enough to make butter for the market. In the country parts the price of really good butter is 20 cents per lb., and the views of the farmers as to its future range are high.

Our Produce Market continues very dull. Flour is gradually declining, and holders are slowly working off their stocks. In grain there is nothing doing; but as a considerable quantity will soon be brought forward, more activity and definite prices may be expected. As regards Provisions of all sorts, there is no special feature to note.

IN GROCERIES the market has ruled quiet. As regards the prices of staples for the future, opinions are very divided, many hold that we will have a late fall trade and a lower range of prices in most articles, with the exception of teas; others maintain that, with a plentiful harvest in the West, light importations and no present overstocks, prices will rule firm, or if anything advance; a few weeks will decide which of the prophets are right, my opinion inclines to the latter view. There has been considerable speculation in Fish oils, especially cod, and the stock is now held in few hands.

DRY GOODS, as mentioned in my last stocks are fairly opened out, and several large Western buyers are in the market. Prices of Cottons rule firm, and holders are not pressing sales. Fancy goods are in ample supply, but for the more expensive articles of these, and also of fine silks and velvets, the sale is so far slow. Spinners of the coarse qualities of Canadian manufactured woollens have had a hard time of it this season. They bought their wool when it was dear and have now to compete for the fall trade with those who purchased the raw material at greatly reduced prices, the markets too are overstocked and many descriptions of heavy woollens and coarse hosiery are a drug in the market. Makers of fine tweeds are in a better position and will realize a profit on their goods. A number of the factories dependant on water-power are stopped, owing to the lowness of the rivers, this will prevent any serious increase in stocks. There is a fair demand for imported woollens, and the prices ruling last spring still obtain.

MONTREAL MANUFACTURED HARDWARE.—The market continues dull but manufacturers are busy making stock for the fall and winter demand. The agricultural machine makers have had a busy season, and I believe a profitable one. The use of reaping and threshing machines is rapidly spreading in the Province of Quebec, even amongst the habitans, who are slowly beginning to see the great economy of their use, especially when labor is as dear as it has been this season.

THE BOOT AND SHOE trade is lively, and old stocks are getting worked off, whilst new and good ware are in active demand. This increased activity will soon have an effect on the leather trade, which up to the present moment has been very dull.

Miscellaneous.—Our trade with the River Plate is rapidly assuming considerable proportions. At present there are four vessels loading lumber for Monte Video, and from the excellent quality of timber in the course of shipment, so superior to what they have been in the habit of receiving from the Iowa ports, there is no doubt but that in future Brazil and the River Plate will draw the bulk of their supplies from Montreal, and we shall be able to reciprocate by getting return cargoes of dry and salted hides, instead of having, as at present, to buy them in New York.

There is a strong desire to get our principal streets repaved with the Nicholson pavement, and petition is before the council to commence with Great St. James' street.

The question of buying land for a public park comes before the Council to-morrow night. It is to be hoped some action will be taken.

[Toronto Market.

PRODUCE.—*Wheat.*—Receipts very light; the market is dull and nominal, in the absence of receipts or stocks; one car midge proof sold at $1.20 in store. New wheat is being offered at the stations west of this, at about $1.25. There is little demand and nothing doing yet. *Barley.*—Receipts by cars 26,104 bush., and on the street 43,000, making a total of 69,104 bush. against 60,000 bush. the previous week. The market closed a week ago at $1.05 to $1.06, but suddenly fell off to $1, and during the last few days has ranged between 90 and 95c., closing at 93 to 95c. Sales of car loads were made at 92 to 93c.; a small cargo was offered at the close of the week at 96c., but that is above the market. The market opened unusually high, and it is not to be expected that prices will recover this season. A telegram from Oswego, of the 2nd September, quotes at $1.70, with sales of 25,000 bush. *Oats.*—Receipts 1,200 bush.; the market is dull; a small lot sold at 45c. which is now the top of the market. *Peas.*—Some small lots of new have been offered, 300 bush. sold at 95c.

FLOUR.—Receipts, 725 brls. and 500 brls. last week. Superfine is very dull, there is a small shipping demand for the Lower Provinces at about $5.90 with sales at $6; no sales reported. Extra is steady with a small demand at $7, a lot of 50 brls. selling at $7.25. Superior is nominal at quotations, none offering and no sales. *Oatmeal*—is selling in small lots to the retail trade at $6.50 to $6.75. *Cornmeal*—is selling at $4 to $4.50.

PROVISIONS—*Butter* is a little easier, there is, however, very little in market. The dry weather has greatly reduced the production of butter in the country. *Cheese.*—A traveller for one of our houses gives it as his opinion that the cheese crop will not be more than half of that of last year. This arises not merely from drouth and consequent decrease of food for cattle, but also from the unsatisfactory results of last year's business. Cheese moved slowly, sold at low prices and returns were a long time in coming in. *Eggs.*—There is a fair supply in market, from 10 to 11c is paid.

Boots & Shoes.—The fall trade is fairly opened up, and during the past week a good, lively, and at the same time healthy business has been done. The demand of course runs chiefly on heavy goods, which are now in season. Prices are unchanged.

Dry Goods.—Now that it is definitely ascertained that the harvest has been about a fair average, more confidence has been imparted to the wholesale trade. Buyers are gradually coming in. The incoming week is expected to be a busy one.

Leather.—Trade is very quiet, and the market is rather weak at quotations.

Hides.—A fair trade is reported at unchanged prices.

Freights.—Owing to the dulness of the Barley Market, there was very little done in freights by lake. The rate on grain to Oswego remains steady at 3½ cts. American currency, with few engagements; to Toledo, 5 cts. Flour to Montreal, nominal at 20 cts.; plenty of tonnage but little freight. Railroad freights unchanged.

Halifax Market.

Halifax, 26th Aug.

Breadstuffs.—The demand for flour continues good for the season, and holders are firm at $8.25 to $8.50 for No. 1 Canada; $8.75 for extra; extra State $8 to $8.20; Baltimore superior $7.25 to $7.75; Baltimore extra $8.25 to $8.50. Rye, dull at $6.50 to $6.75. No change in meal, Kiln dried $4.80 to $5; fresh ground, $4.50. Oatmeal dull, at $8. Imports from 1st January to 25th August, 1867 and 1868.

	Brls. Flour.	Brls. Cornmeal.
1868	107,022	37,321
1867	104,598	27,957

West India Produce.—Without change. Holders firm at quotations. Market almost bare of Vacuum Pan sugar. Porto Rico 6¼ to 6½c; Cuba 5¾ to 6c. Barbadoes 6 to 6¼c in bond. Molasses 30c early crop Cienfuegos. Rum Demerara 50 to 51c. St. Jago 43c in bond.

Financial.—Bank drawing rate on London 60 day bills 13¼ per cent prem.; Private 12½ to 12¾ per cent prem. New York gold drafts at sight, 3½ per cent prem. Currency drafts 27½ per cent discount. Montreal sight drafts 3½ per cent prem. Newfoundland sight drafts 5 per cent prem.—*R. C. Hamilton & Co.'s Circular.*

The Wool Trade.

The *United States Economist*, in reviewing the wool market says:

It was said at the time the wool season commenced that wool was never so light as this year, but did any one ever know a time when it was extremely hot at the time of shearing that the wool was very light? It is true fleeces did not weigh heavy, but this was not on account of the wool being free from yolk, but because it was short in growth. Farmers are not getting a heavy growth of wool this year. Corn and grain was too high, and they was too poor to make good wool. This year we have a large amount of weak stapled wool, which will shrink heavily in working, and, on account of the hot weather, it will shrink heavily in scouring; but notwithstanding all these drawbacks, there are some very good and choice wools; and it is also true that the good wools bring in the market less comparatively than the poorer ones. One thing may be put down as a fact from which there is no getting away, goods are doing better.

Cotton has had its day for a time. Wool will now take the lead. Woolen goods, and every kind of goods into the manufacture of which wool enters, will better. Wool in six months will be scarce; in nine months it will be very scarce; manufacturers will run their machinery, and will wool be wanted. It is no use getting excited about it nor making reports to excite or stimulate consignments, the wool will all be wanted, and will be sold before next June.

Every grade will be wanted. Pulled will wool be in demand; it is wanted now; medium and coarse wools are wanted. Combing is wanted and is scarce, and as provisions decrease in price, wool will advance. It is no use to talk about pelts; England wants hay and corn. This will keep up the price to some extent, but it will stop the flow of gold, and may turn the tide this way. We need it; business of every description wants it, but most of all, wool and woolens; we should not be dependant. We have a large country, and a numerous people to cloth and feed, and we can do it. It is no use killing sheep before they are fat. Then we want them for food, but before that we want them for clothing.

St. Lawrence Canals.

The following was the amount of tolls collected on goods passing through the St. Lawrence canals for the month of July:

Tolls upwards	$3,267 09	$3,495 86
Tolls downwards	4,986 13	4,705 75
Other dues	983,81	1,711 82
Total	$9,237 03	$9,913 43
Free Produce downward	768 60	1,104 95

Trade with South America.

There is still a fair demand for vessels for the River Plate for sawn Lumber. The *Sir Richard MacDonnell* and *Esmerdale* have both been taken up, the former loading at Three Rivers on Canadian account, and the latter at the wharf, foot of the current, on New York account—both chartered by W. M. Freer & Co. The *St. Lawrence*, *Rivoli* and *Annie Logan* are also loading for South American ports.—*Montreal Herald.*

New Customs Regulations.

A difference of opinion appearing to prevail at several ports in reference to the definition of the word "periodical," mentioned in the Tariff, the Customs Department has issued a circular to Collectors, stating that it comprises those publications which appear at regular intervals, such as newspapers, reviews, magazines, annual registers, etc., devoted to religion, politics, the sciences, arts, amusements, etc., which publications are entitled entry at five per cent. *ad valorem*. The Department has likewise decided that the interpretations of the "Tariff 1867," transmitted with circular of 24th January last, in regard to admission of machinery for mills and factories, are to be held to include all new machinery imported for the extension of manufacturing power, and not to replace or repair old articles of the same class.

Albany Lumber Market.

August 19.—The receipts for the week have been large and stock is accumulating in the market. The supply is good and well assorted. The sales have been good, and several large buyers have been purchasing for winter stock, and prices are considered as low as they will be this season.

Freights are without nominal change. We quote: To New York $1.50, to Bridgeport and New Haven $2.25, to Norwich and Middletown $2.75, to Providence $3.25, to Hartford $3.25, and to Philadelphia $3.50.

The receipts of board and scantling thus far exceeds those of last year 52,512,040 feet, shingles 12,024m, timber 60,450 c. ft., and staves 8,505,586.

The Thames River Channel.

Mr. Stephenson, member of the Ontario Parliament, a few days since addressed the Chatham Council respecting the dredging of the mouth of the river. He stated that the Government had offered to appropriate $2,400 for that purpose, provided the local authorities would raise a like amount. Mr. Stephenson also read a letter from Mr. Brown, offering to dredge a fifty-feet channel ten feet deep for $4,800; $2,400 to be paid when completed, and balance after the close of navigation next year, provided the town or country would guarantee the payment of such balance.

Liverpool Provision Market.

Bacon—Continues in good request, both for consumption and export; 1s. advance is now required for Cumberland Cut and Short rib. Stocks are reducing fast.

Lard.—The sales about 100 tons at steady rates.

Cheese.—The arrivals are considerable, which sell freely at an advance of 1s. @ 2s. ₱ cwt. on all quotations.

Butter.—New Canadian has just arrived. If the quality and condition are good, it will bring our highest quotations.

Current rates are:—Cheese—Extra, per cwt 58s. @ 62s.; fine, 48s. @ 55.; middling, 20s. @ 40s. Butter.—U. S. and Canada, fine and extra per cwt. (new), 85s. to 110s.—*Circular, Aug.* 19

BANKRUPTCY.—A Bill, which has for its object amendment of the Bankruptcy Act of 1861, been brought in by Mr. Moffatt, Mr. Crawl, Mr. Ayrton, and Mr. Charles Foster. It is posed to repeal the 86th section of that Act, in lieu thereof to enact that any debtor may tion for an adjudication of bankruptcy against nself, the filing of which would be an act of kruptcy, without any previous declaration of lvency. The petitioner would have to satisfy eourt that he could pay 5s. in the pound, or, ing this, to prove that he had convened a meet- of all his creditors whose debts exceeded £10. deed made between a debtor and his creditors uld be valid unless left at the office of the re- rar, with a list of his debts and liabilities, at time of signing the deed —*London Produce rkets Revtew.*

MONTREAL, Sept. 1.—There was only one large which destroyed the provision store of W. & Gunn, situated elose to the St. Ann's Market. e exact loss is not yet fully ascertained. There e been several alarms and some small fires, but hing of any moment during the week.

DEPOSITS.- The New York and Connecticut e, and the Etna and Hartford Fire Insurance mpanies have paid their deposits into the hands he Finance Department, as required by the Act last session.

USE OF PETROLEUM.—A petroleum establishnt in Leipsie, besides various forms of appara- for refining petroleum and producing petrom gas, advertises the following chemical ducts : Alcannine, for coloring fats and oils ; rlatine, for dyeing wool and silk, as well as for or printing of books and plates ; Petroleum her, for therapeutie and technologieal purposes ; nzine of any degree of fluidity, clear as water l perfectly free from smell ; Ligroin, for burnin sponge lamps ; Artificial Oil of Turpentine, waxed eloth and varnished fabrics, as well as the cleansing of type and printers' form ; Red Petroleum, almost inodorous, and Petroleum sidum for gas-making.

CABINET FACTORY FOR SALE

BY

PUBLIC AUCTION.

THE ATTENTION OF

CAPITALISTS AND OTHERS,

IS INVITED TO THE PROPOSED

Sale by Public Auction,

OF THE

Extensive and Well Known

CABINET FACTORY AND PREMISES,

OF

EDWARD MIALL & Co. (LIMITED),

OF

OSHAWA, ONTARIO.

THE Premises comprise about Three Acres of Land, a substantial three story BRICK FACTORY, 144 x 40, Engine House, Dry Kiln, separate therefrom, and other Outbuildings.

The plant is of the best and newest kinds, embracing all the most approved machinery of the day, in full running order. As the Factory is now in operation, with a full supply of materials and workmen, no delay need be experienced by a purchaser.

The Village of Oshawa is on the line of the Grand Trunk Railway, 30 miles east of Toronto, and it has an excellent harbour on Lake Ontario. The country surrounding is one of the oldest settled parts of Western Canada. Living is cheap, and every facility is afforded for carrying on a rapidly increasing manufacturing business. In 1867 the profits of the business reached $18,435.82.

The undersigned having come from England, solely for clearing up the estate, the sale will be WITHOUT RESERVE. The Stock in process of Manufacture to be taken at a valuation by the purchaser, he having the option of taking the manufactured stock and lumber also at valuation.

SALE AT

PRINGLE'S HOTEL, OSHAWA,

WEDNESDAY, 23RD SEPTEMBER, 1868,

At 12 *o'clock, noon.*

The vendors are prepared to receive tenders for purchase by private sale, and to offer very favorable terms of payment.

Further particulars may be had by application to English & Foster, Solicitors, Toronto; Carter & Hatton, Advocates, Montreal, or to the undersigned, care of "Edward Miall & Co., (limited)," Oshawa, Ontario.

R. RUMNEY,
Chairman.
S. D. WILLIAMS,
Secretary.

The Canadian Land and Emigration Company

Offers for sale on Conditions of Settlement,

GOOD FARM LANDS

In the County of Peterboro, Ontario,

In the well settled Township of Dysart, where there are Grist and Saw Mills, Stores, &c., at

ONE-AND-A-HALF DOLLARS AN ACRE.

In the adjoining Townships of Guilford, Dudley, Harburn, Harcourt and Bruton, connected with Dysart and the Village of Haliburton by the Peterson Road, at ONE DOLLAR an Acre.

For further particulars apply to

CHAS. JAS. BLOOMFIELD,
Secretary C. L. and E. Co., Toronto.

Or to ALEX. NIVEN, P.L.S.,
Agent C. L. & E. Co., Haliburton.

PROSPECTUS.

IN order to supply what, for the last two years, has been felt to be one of the greatest wants of our City—namely, a Class of Dwellings respectable both in appearance and situation, and of a rental fairly coming within the means of persons of limited incomes,—it has been deemed advisable to form an Association, similar in principal to what has for some time been in successful operation both in England and Scotland.

The working of such a Company would, as regards the parties to be immediately benefitted, be of the simplest possible kind, and is explained as follows :—

Suppose a Lot of 100 feet frontage to cost $10 per foot.....	$1,000
Four Dwellings to be erected thereon, at $750 each	3,000
10 per cent. Interest and Insurance, at $750 each..	400
	$4,400
6 per cent. for Interest for ten years.....	2,640
	$7,040

Making each Dwelling and Lot to cost $1,760,—to be paid for by Purchaser, by monthly payments of $14 67—or about $44 per annum, at the end of ten years the property would become the purchaser's own on terms little exceeding the ordinary rental paid for similar Houses.

It is proposed to form a Company whose capital would be $100,000, to be raised in Shares of $25 each, payable by monthly instalments of 50 cents per share, it being optional with Shareholders to pay part or the whole of their shares at any time.

It is deemed unnecessary to enlarge upon the advantages to be derived from such an organization as is here contemplated. No one can be blind to the scarcity of such a class of Houses as is here referred to, or to the very favorable terms on which it is proposed to put the purchasers into possession of them, free of all incumbrances, save the payment of taxes, and keeping each his own property in repair.

It would be competent for the Company to build such a class of Dwellings as would be most in demand, either exceeding or falling much below the above-named average.

With regard to the prospect of a fair return being secured to the Shareholders, it will be observed that the amount originally invested in Land and Buildings, together with interest thereon, being repayable by Instalments, (in the shape of Rent) monthly, will necessarily increase the rate of Interest actually derived, as it will be again, on the first favorable opportunity, invested on the same terms. This will leave a margin for working expenses, after a fair average dividend has been declared.

PROVISIONAL DIRECTORS.

Gen'l Agents for the Dominion of Canada

Montreal, 1st August, 1868. 52-5

CONSOLIDATION
OF THE
Bryant, Stratton and Odell Business College
AND TELEGRAPHIC INSTITUTE,
WITH THE
BRITISH AMERICAN COMMERCIAL COLLEGE,
Under the Management of
J. D. ODELL, AND EDWARD TROUT.
PROPRIETORS.

WHO having purchased from Messrs. Musgrove & Wright their interest and goodwill in the British American Commercial College, have succeeded in combining all the talent and securing all the advantages of both Schools, making the most extensive and complete institution of the kind in the Dominion, and the only one where the principles of actual business are successfully and practically taught.

Our rooms are extensive and complete, occupying separate buildings, and capable of accommodating 300 students. We employ a full corps of teachers, among whom are men of business experience, and the two **Premium Penmen of Canada.** Scholarships good in Montreal and in the principal cities of the United States.

For specimens of penmanship, circulars, &c., address,

50-tf. ODELL & TROUT.

Hartford Fire Insurance Company.
HARTFORD, CONN.

Cash Capital and Assets over Two Million Dollars.

$2,026,220.29.

CHARTERED 1810.

THIS old and reliable Company, having an established business in Canada of more than thirty years standing, has complied with the provisions of the new Insurance Act, and made a special deposit of

$100,000

with the Government for the security of policy-holders, and will continue to grant policies upon the same favorable terms as heretofore.

Specially low rates on first-class dwellings and farm property for a term of one or more years.

Losses as heretofore promptly and equitably adjusted.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark*; 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

The Canadian Land and Emigration COMPANY

Offers for sale at Cheap Rates, on condition of settlement,

FARM LOTS, IN DYSART,

And adjoining Townships, in the County of Peterborough.

THE greater portion of the Company's block of nine Townships is excellent farming land. The Judges at the Provincial Exhibition at London, in1865, awarded to the Company a Special Prize, and at Kingston, in 1867, a Diploma for the assortment of Farm Produce from their settlements. The country is well watered, healthy and picturesque. Dysart is a well settled Township, with mills, schools, &c., while stores, post-office, boarding-houses, &c., are established in the Village of Haliburton. There is also a rising settlement in the Township of Harcourt; and along the Peterson road the settler has a choice of good Farm Lots in no less than six Townships.

The communication to the Townships is good, a great part of it by Railroad and Steamboat.

The Bobcaygeon, Opeongo, Peterson, Mississippi, and Hastings Roads will all give access to the Company's block, but other roads are being opened up, giving a more direct communication with the County Town of Peterborough.

The Company has expended a considerable sum in the construction of Roads to and through its Townships, and has still a large appropriation for this purpose.

Dysart and adjoining Townships, the property of the Company, form one Municipality which cannot fail to make more rapid progress than any of the Municipalities in that section of the country, on account of the large sum levied every year from the Company.

For further information and particulars and conditions of sale, apply to the Secretary,

CHARLES JAS. BLOMFIELD,
Bank of Toronto Buildings, Toronto.

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*...

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northam, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country, has been steadily prospering. The *Massachusetts Insur Reports* show that in nearly all important matters superior to the general average of Companies. It offe intending assurers the following reasons, amongst oth for preferring it to other companies:

It is purely Mutual. It allows the Insured to t and reside in any portion of the United States and Eur It throws out almost all restriction on occupation fro Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note all cash company. Its Dividends are declared annu and applied in reduction of Premium. Its Dividend in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for year the policy has been in force. The number of D dends will always equal the outstanding Notes. It pay losses promptly—during its existence never having tested a claim. It issues Policies for the benefit of ried Women beyond the reach of their husband's credi Creditors may also insure the lives of Debtors. Its Pol are all *Non-forfeiting*, as it always allows the assure surrender his Policy, should he desire, the Company ing a paid-up Policy therefor. This important fe will commend itself to all. The inducements now of by the PHŒNIX are better and more liberal than tho any other Company. Its rate of Mortality is exceed low and under the average.

Parties contemplating *Life Insurance* will find it to interest to call and examine our system. Policies is payable either in *Gold* or American currency.

Meetings.

GRAND TRUNK RAILWAY.

Report of the Directors to the Bond and Stockholders, for the Special Meeting to be held on Thursday, August 27, at the Cannon-street Hotel, at one o'eloek, to consider whether lists of Bond and Stockholders shall be issued.

The following is the object for which the meeting will be held, viz. :—"For the purpose of submitting a resolution for authorising the Directors to supply to bond and stockholders, on application, a list of the registered proprietors of bonds and stocks of the Company ;" and as the hesitatation of the directors to give to certain parties this list without such authority as that now sought to be obtained, has been made a ground of attack against them, they deem it proper to place before the proprietors the following statement :—On the 28th of April last the board received a letter from Mr. Heseltine, the chairman of the Buffalo Company, applying for a list of the registered proprietors of the Grand Trunk Company,, and on the next day the following resolution was passed and sent to that gentleman :—"Resolved —That as this board have invariably (under legal advice) felt obliged to deeline to furnish to individual Grand Trunk shareholders the list requested in Mr. Heseltine's letter, sueh request be not complied with. But that under the special circumstances of the Buffalo and Lake Huron Company's connection with the Grand Trunk, and of Mr. Heseltine as their representative, the secretary be direeted to address and forward to the Grand Trunk shareholders (of course at Mr. Heseltine's expense) any communication which he may desire to make to them, if he thinks it proper to make sueh communication independently of this board. The board, it will be observed in this resolution, undertook, in fact, to forward to their proprietors matter which, from previous discussions with Mr. Heseltine, they eould not but be aware would be altogether in the interest of the Buffalo Company, and opposed to the views of the Grand Trunk board. Mr. Heseltine refused to accept the offer thus made him. Following this, viz., on the 27th of May last, a similar application for a list of the registered proprietors was made by Messrs. Marshall, Paine & Co, on behalf of themselves and other bond and stockholders. Upon that requisition the board, on the same day on which it was received, passed the following resolution, viz :—"The request of Messrs. Marshall Paine, &c., having been read and considered, it was resolved that they be informed that (acting on legal advice) this board cannot comply with this request, especially as they have always hitherto deelined compliance with similar requests ; but if at the next general meeting it be the pleasure of the shareholders to instruct the board to apply for further powers in this respect, such power shall forthwith be applied for, this board personally having no objection whatever to comply with the wishes of the shareholders."

Subsequently the board ordered the following letter to be written to Messrs. Marshall Paine & Co., and the other requisitionists :—

"21, Old Broad street, London, E.C.,
"May 30. 1868.

"Gentlemen,—The Great Western Company of Canada labored under a similar disability as ourselves in regard to the issue of a list of the registered proprietors up to 1860, when a resolution was passed at the half-yearly meeting of that Company to the following effect :—'That any shareholder be permitted to inspect, on a payment of a fee of 2s. 6d., and an application in writing to be supplied with an alphabetical list of the shareholders and their respective addresses on paying for the cost of extracting the same from the books of the Company.' I am now desired to ask you to be good enough to state whether it is your wish to give notice of your intention to propose a similar resolution at our next half-yearly meeting, and if so, I am to add the Directors will embody the notice iu the notice calling the meeting. I may here repeat what I yesterday mentioned to your Mr. Lewis Paine, that, as regards the application of Mr. Heseltine for a list of our proprietors, whilst the Company could not comply with the request, the Directors were nevertheless ready and willing and distinctly offered to send out from this office any communication which he or his Company desired to circulate amongst the Grand Trunk bond and stockholders.

"I am, Gentlemen, your obedient servant,
"J. M. GRANT.

"Messrs. Marshall Paine & Co.,
Stock Exchange.

Further, in a letter sent by the secretary on the 16th of June last to Mr. Creak and Mr. Hartridge, the conveners of the meeting held at the London Tavern on the 18th of that month, he, in accordance with the board's instructions, wrote that "any communication or statement which they may desire to circulate among the bond and stock holders the board will be happy at once to forward accordingly without delay ;" but this offer was not accepted by those gentlemen. At the meeting of the 18th June, besides a resolution ealling upon the present board to resign, a resolution was passed requesting the Directors to furnish Mr. Creak and Mr. Hartridge with a list of the stock and bondholders at the earliest possible period. To this application the Directors, on the 24th June, sent the following resolution in reply :—"That with respect to the application for a list of boud and stockholders, Mr. Creak be informed that, under present circumstances, the Board ean only refer to their resolution of the 27th ult., and to the secretary's letter to Mr. John Marshall Paine, of the 30th ult., inviting that gentleman, and those acting with him, to take the necessary steps for obtaining for this Board authority from the ensuing general meeting to furnish the list requested, this board repeating that as far as they are concerned they will be happy to co-operate in asking for the necessary authority. Mr. Creak acknowledged the receipt of this resolution on the 25th, and the board hearing nothing further from him or from his colleagues for a week, they, on the 1st July, passed the following resolution :—"In reference to Mr. Creak and Mr. Hartridge's committee, it was decided that if no requisition be presented by the dissentient stockholders by Wednesday next, the board should itself call a meeting to consider the question of printing the list of registered proprietors, and then adjourn to the ordinary half-yearly meeting to be held in October, when the

questions raised by that committee could be fairly submitted to the whole body of the proprietary." On the following day, viz., the 2nd of July, Mr. Creak sent in a resolution of his committee requesting the board to convene special meetings at the earliest legal period, and at their next board the directors resolved that the meetings referred to should be called for the earliest date at which they could be assembled, a choice of days being given to the committee. The 27th of the present month (August) was then fixed for the special meeting to consider the question of issuing the list of registered proprietors. The second meeting will be held in October on the same day as the ordinary half-yearly meeting, of which due notice will be given. Upon the general question of the right of shareholders in these railway undertakings to know who are their partners, and what are the respective interests of those partners, it is to be observed that there is but little analogy between these cases and the cases of ordinary mercantile partnerships, to which some persons have erroneously compared them. In truth, the rights and powers of the Shareholders in these undertakings are limited, and are defined by the several acts of Parliament, which give to the Directors only certain powers and to the shareholders only certain other powers. And, in point of fact, the Grand Trunk act (differing in this respect from most English acts) does not give the shareholders a right to have a list of their fellow shareholders, nor does it give the Directors the right to publish such list. The board have throughout shown every willingness, as far as they personally are concerned, for any class of stock and bondholders to communicate with their fellows; beyond this the Board have not felt at liberty to go, because, not only on former occasions, when they have refused lists of stockholders to applicants for them, has that refusal been sustained by the subsequent general meetings, but it is within the knowledge of the board that many bond and stockholders still object to the publication of their names. Under these circumstances, the board have all along considered that they have no right to publish such lists without, at least, the previous consent of a meeting of the Company. In favor of the publication of the list it may be urged that thereby all the stock and bondholders would be at once known to each other; but this is, perhaps, little more than an apparent advantage, since the same result (and without the attendant disadvantages of the publication of the list) would be attained by the circulation by the board (in accordance with their offer) amongst the stock and bondholders generally of any communication which any individual, or set of individuals, might desire to make to their fellows. Against the publication of the list it may, on the other hand be urged that many persons may consider it a serious disadvantage to have their names unnecessarily published to the world as being what some parties may choose to call speculators in Grand Trunk stocks. With these few observations *pro* and *con.*, the Board leave the matter entirely in the hands of the proprietors generally, they themselves not intending to vote upon it one way or the other. Herewith is enclosed a form of assent or dissent, which they request may be signed and returned before the day of meeting. In regard to the matters now in dispute between the Buffalo and Grand Trunk Companies, and which have doubtless a close connection with the present opposition, the Board feel that they need only refer to the following letter addressed by the Company's solicitor to the Buffalo Directors :—

"32, Great George Street, Westminster,
July 1st, 1868.

"Sir,—The Grand Trunk Board have referred to me your letter of the 24th ultimo, because it is a mere repitition of your Board's previously answered proposals, and because my clients conceive that therefore, as well as because the whole matter has necessarily assumed a legal shape, they cannot themselves further interfere usefully. My letters to your solicitors will show why a reference of the vague character now again proposed by you could lead to no practical result save delay. If your solicitors will either adopt my proposed form of reference or will suggest any definite form which would enable the Board of Trade to appoint an arbitrator, and enable the arbitrator to make an award on the points in dispute, or will leave it to Mr. Farrer, or Mr. Herbert, of the Board of Trade, to settle the form of reference, my instructions are to give the matter immediate attention, with a view to the earliest possible settlement. I am, Sir, your obedient servant,

"J. Brend Batten.

"Thos. Short, Esq., secretary, Buffalo and Lake Huron Company."

The offer contained in this letter was declined, Grand Trunk proprietors will see, however, that the Board have done all in their power to obtain a settlement of the pending disputes with the Buffalo Company consistently with a due regard to the interests of the undertaking of which they are trustees.—By order,

Edward W. Watkin, *President.*

To the Bond and Stockholders of the Grand Trunk Railway Company.

Mr. E. Hesseltine has published a reply to the recent statement by Mr. Watkin, the chairman of the Grand Trunk Company, to the bond and stockholders. Mr. Hesseltine replies that on the 1st of May last he expressed his opinion that the affairs of the Company were mismanaged. It was his intention then, as it was now, to obtain a list of the proprietors, and to ask them, either personally or by proxy, to say yea or nay to the question, "Shall Mr. Watkin continue to manage our affairs?" Nearly four months had elapsed, and he was afraid he would still have some time to wait before this list was obtained, unless the proprietors would speak out very plainly.

Mr. Heseltine, after replying to some arguments by Mr. Watkin, states—"Gentlemen, I am satisfied, as I told you in my circular of the 1st of May, that a change of management is absolutely necessary. It is unwise, as I might almost say absurd, in us, the proprietors, to allow a gentleman like Mr. Watkin, so overwhelmed with business, to have almost the uncontrolled management of our affairs. Mr. Watkin, as I am told, has little or no interest as a shareholder in the Company, but he draws, I believe, something like £40 per week for the honor of sitting in the chair in Old Broad Street. In addition, I am told, the South-eastern chairmanship gives him £50 a week. From the Sheffield Company he enjoys about £20 a week. I set my face against this trade in Directorships, Let us say distinctly to Mr. Watkin that we are not satisfied with his management, and seek the services of a gentleman who can give us his entire time."

In another place Mr. Heseltine says:—"I have no wish to use unnecessarily harsh language, but as representing an interest in the Grand Trunk property to the amount of £2,500,000, I cannot look on and be witness to the misery caused to hundreds by the mismanagement of this fine property, without making every effort in my power to effect a change. I have no connection with the Grand Trunk Committee, further than I believe we both aim at the same object; viz., a change in the mangement. Mr. Watkin's efforts to divert your attention from the subject of management, to his disputes with the Buffalo Company, will, I have no doubt, be estimated by you at their true value. I trust at the meeting on the 27th a large number of proprietors will attend, and insist on a list of the bond and stockholders (without the amount of their holdings) being printed, and accesible to the shareholders, on or before the 5th September next." He intends to abstain from attending the meeting on the 27th instant, in order that the bondholders', &c., "attention may not be diverted to Buffalo and Lake Huron affairs."

London and Port Stanley Railway.—The annual meeting of the stockholders of the London and Port Stanley Railway took place Aug. 3rd, when the report of the superintendent was read and adopted. The gentlemen who were elected on the Board this year are as follows: Messrs. M. Anderson, London; Thomas Mc. St. Thomas; and R. Thompson, Port Stanley. At an after meeting Mr. Anderson was elected President, and Mr. Thomas Arklee, of St. Thomas Vice-President.

Mining.

NOVA SCOTIA GOLD MINING REVIEW

We condense the following from the *Mining Gazette*:—

Sherbrooke.—Considerable activity exists here. The Dominion Company expect to return a hundred ounces this week. The ore in their mine improves in depth, and the width of the vein and the quantity of rock raised during the week guarantee constant and profitable work for the new mill.

The American Companies have reason to be satisfied with their present prospects. Mr. Cook took up a large brick last week, and has material for another in the battery. Mr. Cook has now the management of the Stanley Mine, Cook having taken an interest in a property in Oldham.

The Canadian purchases are being systematically explored. A new lode, showing gold at surface, has just been struck across the Chicago, Kilmarnock and Woodbine lots.

Prospecting continued on the eastern side of the river, from McDaniel's lands down to Sherbrooke. Several lodes have been found on Mount Pleasant, a property that offers capital facilities for hydraulic mining, but which the folks here do not know of or are afraid to attempt.

Renfrew.—"The returns of the Ophir Company for June, totalled 357 ounces; but owing to want of water for crushing, the yield for the month of July was only 247 ounces. During the latter part of this present month the water had fallen to its lowest level, but thanks to a heavy rain storm yesterday there is now sufficient water to keep the crusher at full speed; so that Ophir will probably make a fair show yet for the month of August. A new lode was discovered on the Ophir property about 50 feet south of the old "Sout during the month of June. Two tons of ore crushed from shaft No. 1, taken from the producing 5 ounces. Since then it has been opened in three other places, with the most encouraging indications of success. Colonel Allen has disposed of the Ives property to a Canadian Company. The Company under the management of Lockie, Esq., have commenced operations with good prospects. They have already taken quite a number of tons of ore, showing visible gold very freely. It is to be hoped that their returns will be commensurate with their expectations. A large amount of prospecting has been done during the summer. New lodes have been opened up look promising. New ground has been secured for mining purposes. New Companies have been formed, and ere the year closes Renfrew will have resumed its former activity and prosperity. Nothing had been done at the Nine Mile washings, since last advice until this week, a company having just been formed for the purpose of sinking a shaft to the bed rock, where it is expected that gold will be found in abundance.

Wine Harbor.—Times here are constantly improving, although the returns for the month will not show a large amount of gold, owing to the fact of the "Victoria" and "Orient" crushers undergoing repairs. The only crusher running this month is the "Machias," and the ore going through that is not very rich, a

a large lead on the north wall, which at one was not considered worth taking down, but yields from five to ten pennyweights—thus ing that our gold-saving machinery has im- d.

ere has been a rich lead discovered on the ado Company's property, on what once ged to the Nova Scotia Land and Gold ing and Gold Amalgamating Company, which to prove (if further proof were necessary) that Company's business was mismanaged. Eldorado Company are sinking a shaft on this and also repairing their crusher. This Com- in future, will be under the management of Seth Williams.

e same lead is also being prospected for on McIntosh property, and shows in the street en the McIntosh and Eldorado. The Eureka rient Companies have large crews of men to but they will have no quartz crusher, as the t mill is being repaired.

e Eureka Company have no mill yet, but will ence building soon. One or two other pro- g properties are expected to change hands y, which will still further improve the et.

e hundred and forty-four areas have been y applied for in August, besides some prospect- pplications, thus showing that the interest in istrict is not decreasing.

TLACKE.—The results from this district, quite nt the favor in which it is generally held by who are not biassed by eastern interests.

"Uniacke" Company in making a cross cut feet level, have opened an exceedingly rich which improves at every foot of descent.

"Queen" Company are also taking down a ode, rich in coarse gold, at 75 feet. They ow 130 tons from previously opened veins, g to be crushed by their own mill, which is ady. This lot is expected to give an average ounces. The last batch of ore from the ode, consisting of 13 tons 15 dwt., crushed Uniacke Company's mill, gave 47 ozs. 11 2 grs. Some large and splendid specimens last Friday from the bottom of the shaft, n view at the office of Mr. John Stairs, Hollis the early part of this week.

explorations on the "St. Lawrence" Co.'s ty have met with good results, and we have shown some pieces of quartz full of large obtained near the surface. A detailed report ppear in our next issue.

"Central" Company expect to derive the of the new lode discovered on the "Uniacke" any's areas.

explorations of the large tract owned by the treal" Company is carefully conducted by ouquoy, during the temporary absence of Mr. chel. As the work proceeds the indications ure profitable development, become more and pparent.

Association has been formed under the title "North Uniacke Mining Company" to ex- a tract of 114 areas, immediately north of 3, and about half a mile north of the ped gold band. The existence of paying on that portion of the field has yet to be .

ICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

. T, S. Hunt, of Montreal, Canada, pre- views "On the chemico-geological rela- f metals," the object being to sustain the of the aqueous origin of auriferous veins. reatise gave rise to some discussion.

. Silliman expressed his impression that ic veins are not contemporaneous with the but that they have filled the fissures north, d west, and which have, in some sense, growth like that of endiginous trees. He received, everywhere, a singular dualism on the adjacent walls of the same fissure—if on the one side is pyrites, there is the same on the other side, exhibiting the deposit from a central place or axis, the spread of the walls being due to the crystallizing action demanding more space, the fissure showing the length of time of the deposit and the amount of matter. He could no longer hold that the fissure was as wide formerly, a line of force, geodesic in charaeter, northeast and southwest, having determined the deposition, widening from fifty to one hundred, and in the Comstock lode to two hundred feet. These, as Dr. Hunt had shown, exhibit no evidence of infiltration except seepage from the vein as slickensides, debris, etc. In the gold-bearing veins most constant in tenor, the metallic sulphides are always found, as of iron, copper, and more rarely lead, with sometimes zinc and arsenic. The condition of gold in the sulphides was a vexed question. Sometimes we see the gold, but not generally, and it will not yield to amalgamation in any profitable degree; hence the process of extraction must be chemical and not mechanical—the method of chlorination after roasting being the most rational.

Mr. Bassnett, of Ottawa, asked if the Stanislaus lode at Carson's Creek did not negate, so far as itself was concerned, the proposition of Prof. Silliman.

Prof. Silliman had examined it, and found it to exhibit no evidence of igneous origin.

Dr. Blaney asked if it was supposed that the brilliant iron and copper pyrites are precipitated from solution.

Prof. Silliman replied in the affirmative and denied that any man could put his finger upon any evidence of igneous origin in metallic veins. He had been a disciple of the igneous school, but his convictions had been changed after much toil in the field.

Dr. Hunt, in support of his proposition, mentioned the effect of the thermal spring upon the pipes conducting it, the pipe being of bronze, in dissolving.

Dr. Blaney asked whether the Doctor believed that the materials held in solution were deposited by double decomposition.

Dr. Hunt replied that there was a diffieulty in stating how substances existing in solution were deposited. Generally it was a mere question of temperature.

Professor Blake, of California, commended the manner and matter of the paper, remarking that its observations were confirmed by all that he had seen in California and Nevada. He understood that the deposits were brought up by hot waters or vapors, and deposited by reason of contact with the rocks, the water carrying the metal in solution. He had observed that there was an outflow of hot water, for example, in the Comstock lode, and the miners in Nevada first found the mineral adjacent to a spring. This was so in the great Ophir Mine, which, being followed down seven hundred feet, there was still hot water, charged with various salts.

Prof. Stoddard asked if the veins were richer as they descend, as would follow from the law of saturation, and release from pressure. If this were not so, he asked how it could be accounted for.

Prof. W. P. Blake, remarked that his observations for several years upon the gold-bearing veins of California and other regions fully sustained the view of the aqueous origin of quartz veins, and the deposition of gold and silver from thermal waters ascending along fissures. In California there were several interesting confirmatory examples. Gold had been found in visible grains in semi-opal, clearly the result of aqueous deposition. He would even go farther than Prof. Hunt, and maintain the view that gold was even now rising to the surface in springs, and depositing in appreciable quantities, near or at the surface, either by diminution of pressure or of temperature, or by chemical decomposition by contact with infiltrations from the surface, or from the sides of the fissures. A fine example of the formation of quartz veins is found in the well known Steamboat Springs of Nevada, where hot water rises along a fissure for half a mile, and is depositing quartz, and possibly gold and silver. Prof. Blake believed that future chemical investigation of thermal waters in such localities would show the presence of gold and silver, although perhaps in very small quantities. At the celebrated Ophir Mine of Nevada, from which such a flood of Silver had been sent forth, there was originally a spring of water at the service, and a flow of water had been found even at a great depth, and that there the water is hot, and holds various salts in solution.

ORIGIN OF PETROLEUM.

Professor HUNT read a paper "On the Upper Silurian and Devonian Rocks of Ontario." He observed that the palæozoic rocks of the Southwest Ontario region are covered by a thick layer of clay which have rendered examinations of them extremely difficult, but more recently borings for petroleum have greatly modified or entirely removed these obstacles. The stratification of the rocks was noticed at length. The Genesee black slate, the Hamilton group, the sandstone formations were specifically noticed. The distribution of the gray Hamilton shales and black shales has been pretty clearly determined by the borings. The entire thickness of the Portgage group is 224 feet. The Hamilton group attains a thickness of 1,000 feet in some places. The calcareous formations are from 200 to 400 feet thick. The Lower Devonian or corniferous limestone is from 60 to 275 feet in thickness, increasing towards the west. In the northwest the thickness is greatest. Here a boring of 700 or 800 feet was made before reaching a soft marl; below was a layer of rock-salt forty feet thick. This salt formation measures nearly 1,000 feet in New York and on Lake Huron. Gypsum is also found in the lower soil. This shews a condition of very slight precipitation of moisture and of very great evaporation at that time. The petroleum was thought to originate in the lower Devonian limestones. An oilwell in Inniskillen was sunk to a depth of 776 feet. Other very deep wells were mentioned to confirm the theory of the origin of the oil. Similar wells occur in the corniferous limestones in Kentucky. Oil is also found in the lower Salurian. The borings show geological horizons far below the bottoms of the lakes, and that the southwest portions of lakes Erie and St. Clair have been excavated from the quartenary formations.

In the discussion that followed Professor Newberry remarked that the present bed of Lake Erie did not well represent the ancient basin either in extent or depth. The lake was once only a river, and rivers now running into it from the south have their beds one hundred feet above their ancient ones. The rock formations along the river valleys show the undisturbed geological order. He had a different theory from that of Professor Hunt concerning the genesis of petroleum. If it originated in rocks then we can extract it from them. The Hamilton black shales are carbonaceous, and afford some oil. In the Chemung and other groups great oil reservoirs are found. The origin of it must be looked for above where it is found. He thought the black shales, and not the corniferous limestones furnished the petroleum. The carbonaceous matter is derived both from animal and vegetable organism. The lower Silurian limestone is highly carbonaceous, and affords oil in some regions. He showed that a high temperature was not essential to a production of oil from hydro-carbonaceous depositions; a lower temperature only retarded the process.

One member remarked that there was a difference between the Canada and Pennsylvania oils.

Professor Hunt thought these differences of minor importance. He proceeded to review the remarks of Professor Newbury, rather confirming his former position. He would recognize different sources of oil in different regions. Even gravel

beds have been found impregnated with oil. He thought a low temperature insufficient to effect the transformation of animal organisms into oil. He carefully described the chemical process of the of the conversion of vegetable and animal depositions into liquid oil, showing very thorough investigation and ably sustaining his theory for the genesis of oil, in the lower Silurian carbonaceous limestones. The question of temperature was more carfully considered and it was claimed that the chemical transformations producing oil could take place within certain limits of temperature.

Professor Newberry acknowledged that this was a chemical question, but that not all chemists agreed upon certain transformations in carbonaceous substances. Carburetted hydrogen was a product of spontaneous decomposition, and he still thought that the theory presented in the paper was incorrect. He hoped chemists would make observations on spontaneous distillation of carbonaceous substances so as to arrive at a correct theory.

Professor Winchell, remarked that he had spent considerable time in the Ontario region and had carfully examined the petroleum wells. He desired to present a paper referring to the Ontario region. He remarked at some length on the genesis of petroleum, regarding the shales as the true origin. He had examined a test well, and was assured that the corniferous limestones did not furnish the oil. There are dark shales at the bottom of the Hamilton group, but it is calcareous in most regions, although in others it is bituminous, and may furnish oil.

Professor Hunt had spent more time in the region than Professor Winchell, and had made wider observations. At Tillotson the oil is undoubtedly from the limestone, because there are no shales above it. Also at Thamesville oil was pumped from sixteen feet below the upper surface of limestone. He remarked further upon some very deep oils, and reservoirs of oil in rocks which do not produce it.

Professor Winchell rose to speak, but Professor Newberry rose to explain that in Pennsylvania the corniferous limestone was not thick enough to furnish oil.

Professor Winchell then said that he would not have Professor Hunt consider the difference a question of veracity, for he could not question the authenticity and veracity of the statements made. He proceeded to explain and defend his theory.

Insurance.

INSURANCE MATTERS IN MONTREAL.

(From a Correspondent.)

MONTREAL, Sept. 8, 1868.

I question if there is any occupation that affords a larger field for the practice of deception than that of the agency of a Fire Insurance Company, and more especially in the city of Montreal. Fire business in it has reached that pitch, that the *insurers now* name the rate of premium they will pay, and do business on their own terms; and I regret to say that some of the leading British Companies afford the most ample proof of this fact. Once they get a customer inside their doors he is not allowed to leave till the risk is secured at *any rate*. A rather curious illustration of this fact has come to my knowledge, and I will briefly state the case. Some twelve months since a policy was taken out by the Grand Trunk Railroad Company with the "Royal" for $400,000 at 6 per cent., making the premium $24,000. During the period the policy was in force, overtures were made by the Grand Trunk Railway to some six leading insurance companies for a general policy to cover every imaginable property, whether their own or in trust, the amount required was $4,000,000, (including the $400,000 then covered by the Royal), several meetings of those six companies were held, involving the loss of a great deal of time and trouble, and the rate was named by the following Companies, viz., Royal, Phœnix, Imperial, North British and Mercantile, Queen, and Liverpool, London and Globe, and communicated to the Grand Trunk Railroad Company. That Company was in no hurry in returning an answer, but kept the Insurance Companies in suspense as to what their final decision would be. Time wore on and some of the agents began to have misgivings as to the good faith of others of their number. All professed to be bound to accept the risk only at the rate named, or do without it, and ample time was allowed them to advise with their principals in England on the matter. So far all went on smoothly, and knowing that the Royal had already received $24,000 premium on their $400,000, they all felt secure in acting in good faith. It appears, however, that they were soon doomed to disappointment for, as usual, one company broke faith in the most treacherous manner. Acting through its New York agent it made overtures and secured the whole $4,000,000 policy, leaving the other five offices out in the cold. The Company, acting in this manner, is the *Liverpool, London and Globe*, and what adds still more to the bad look of the transaction, is the fact that the sum named as the premiums of that amount, is less than the amount paid the Royal for its $400,000 policy. It remains to be seen whether the head office of this Company will tolerate such a transaction after they are fully in possession of the facts. On this point I may inform you in a future communication. Meantime, however, the Company in question is not likely to make anything by the transaction. Many fires during the past six weeks along the line of the Grand Trunk Railroad have destroyed several bridges, culverts and quantities of cordwood, together with several cars loaded with freight.

To-day I noticed the prompt settlement made for passengers' baggage lost between Brockvile and Kingston, the owners were highly gratified at the liberal and prompt payment which amounted in the aggregate to $1,600.

I think I am under the mark when I state that the claims for loss since the policy commenced (some eight weeks ago) already exceed $9,000. Should a fire occur at or near the General Offices, the wooden steam mills, or car shops at Point St. Charles, it might destroy over $2,000,000 ere it could be got under, these properties being situated at the city limits, where there is only a small 3 or 4 inch waterpipe leading to it. Once let a fire begin at either of the above places designated and it will have made such headway before the city firemen can get at it, that some dozen of buildings would be certainly destroyed. In some of these buildings there are at times 30 to 35 locomotives. I think it only requires to be brought to the notice of the stockholders of the Liverpool, London and Globe Company to prevent a repetition of this style of doing business. Your remarks on the annual statement of the Provincial Insurance Company have been well received here. It is felt to be all-important that the press should closely watch the proceedings of all public companies and fearlessly expose anything that is wrong in their management. I shall be curious to see if the Provincial will submit their affairs to a thorough investigation. I fear not.

FIRE RECORD.—Toronto, Sept. 1.—A fire broke out on the premises of Thompson & Duff, King street, little damage done. The building and stock were insured in the Liverpool and London and Globe, British America and Provincial.

West Farnham, 2nd Sept.—A barn belonging to the Episcopal parsonage was burnt. Loss $500; partly insured.

Bowmanville, Aug. 23.—Cheese factory of John Joness, four miles west of this place, was totally destroyed. Loss estimated at $2,000; insurance $1,400; cause believed to be incendiarism.

Bathurst, Ont., August 29.—John Menzies' house and contents, on the 1st concession of this township, no insurance. Originated from a pipe.

Point Grosse, Sept. 2.—One of the steam belonging to the Ottawa Transportation Com was burnt at Point Grosse on the 23rd.

St. John, N.B.—Two houses of John and one of James Addison, on the Lake L road, were consumed. The latter only in A young man named Maxwell Kennedy, s be intoxicated, was caught by the fire and to death.

Prince Albert, Ont.—The barn, with season's crop, of J. Ackney, on the 8th cono Reach township, were consumed. Loss, ex of building, estimated at $1,600; insurance building owned by Moore of Brooklin, unin

Kingston, Aug. 30.—Six houses occup soldiers of the Royal Canadian Rifles a others seriously damaged. Loss to the I Government $6,000.

STEAMERS BURNED AND DAMAGED BY F Since the era of steamboat navigation on th it is not a little surprising from the numl stroyed, the disasters have been often atten great loss of life. The most eventful of th currences was that of the steamer Erie, a be craft, with a brief but unfortunate career Eric was built at Erie, Pennsylvania, in 18 commenced plying between Buffalo and during the latter part of that season. beautiful modelled or finished boat has nev introduced on our inland seas or lakes, and of good speed. She was 600 tons burden, cabins above the main deck. In August, 18 burst her boiler,, causing the death of six in Detroit River, and in 1841, on the August 9th, she became a total loss by Silver Creek, with 280 lives. Those th rescued were taken on board the steamer Clinton, Captain A. H. Squier, with many dead, and landed at Buffalo the followi The Erie was commanded from first to last tain T. J. Titus, who was subsequently d on the coast of Lake Michigan. The next loss of life by the burning of a steamer, boat G. P. Griffith, in Lake Erie, below land, Captain C. C. Roby, of Perrysburg, mand. A few days prior to this sad ev Griffith changed hands at Buffalo, and port on a Sunday morning, having on boar party of excursionists, of which number of 250 were either burned or drowned. in Captain Roby, his wife and child. The Washington No. 2 was burned off Silver the 2nd of June 1838, with the loss of 6 She was commanded by Captain J. W. The propellor Phœnix, Captain B. G. Sweet for Chicago, on Lake Michigan, took fire o night in November, 1846, a short distan Sheboygan, and was totally destroyed, w lives. Captain Sweet happened to be aw his post at the time. The steamer Niaga tain F. S. Miller, some years subsequen with a like fate, with the loss of upwards lives. Of other steamers which traver lakes in those times, mention might b which suffered damages or were totally some means, not omitting the Sea Bird, Michigan, the early part of the present wtth 100 lives. The Great Western waa destroyed by fire at Windsor; the Thames loss at Windsor; the Little Western, at the Cynthia, near Malden; the Daniel Wel Sandusky, at Buffalo; also the W. F. P. The Detroit No. 2 was partially destroye at Newport. The steamer Vermillion wa destroyed in the same manner while layin dock in Huron, with five lives. The a summary of no less than fifteen boa destroyed, with nearly 1,000 lives in all.- *Post.*

THURSDAY, SEPTEMBER 10, 1868.

RESPONSIBILITY IN MANAGEMENT.

The question of responsibility in the management of our banking institutions is one that requires definite settlement. There was a time in the history of this province when a looseness of management characterised our most wealthy corporations, the plainest dictates of prudence being ignored with an easy recklessness, and ordinary business principles treated with a contempt amazing in its audacity. But competition undermined these outrages on honesty and common sense and, one after another, institutions rotted away and tumbled helplessly to earth burying beneath their ruins the fortunes of deluded victims. Excavation brought to light the secret of their destruction and now fully warned by a hapless experience, the public look for guarantees against disaster that would have, in the old state of things, been deemed hair-brained and revolutionary. The real fact is that we have arrived at a period when business must be done on the strictest business principles.

For the sake of a practical application of our remarks we confine ourselves to the case of banks. How much blame is to be borne by the Manager or the Cashier of a bank and how much is fairly attachable to its Directors when the affairs of the institution become involved? The responsibility is undoubtedly divided ; the Cashier has his share and the Directors have theirs. Sometimes the Cashier shelters himself under the supposed larger responsibility of the Directors and not unfrequently, the latter clear their skirts at the expense of their chief executive officer. As long as prosperity prevailed, mutual congratulations, felcitous in phrase, were exchanged at intervals; but when the little cloud of trouble appeard on the horizon, the vote of thanks was less hyperbolical and on the bursting of the storm-cloud recrimination and hostility extinguished every spark of thankfulness. Under such circumstances we naturally enquire where should justice place the responsibility.

In some cases, the Cashier is the only one cognizant of the facts out of which transactions arise, sometimes owing to their intricacy, at others, owing to the apathy, laziness, or trustfulness of the Directors. On the other hand, we meet with instances in which the Cashier is the mere special agent of those who are his superiors ; a machine moved by a will and guided by a discretion other than his own. His judgment is fettered by the caprice, partiality, or honest stubbornness of his Directors or some of them. Again the Cashier may have above him a Board to whom he is actually afraid to communicate everything that occurs, for it is a matter of notoriety that some Board rooms are leaky. We can hardly imagine anything more trying to a Cashier than the consciousness of having the whisperings of the innermost chamber of his institution proclaimed on the housetops or told in the strictest confidence at the market place or on the corners of the streets. Every bank has its secrets and many banks have before now profited largely by gleaning on their neighbor's fields. Although an accumulation of matters, requiring secresy for their success, is a dangerous heritage, still there is a judicious mean between blatant exposure and studied concealment which it becomes those engaged in the working of banks to respect. A Cashier compelled to labor under such disadvantages as result from a disclosure of his plans or a public explanation of the why and wherefore of his actions, has not a fair chance.

Under the infinite variety of circumstances that might be presented one finds it impossible to lay down strict rules. A Cashier without liberty of discretion is an automaton who heaps up wrath against himself. Any credit earned by the display of ability in the discharge of his duties is appropriated by his superiors. On the other hand where Directors yield a willing obedience to his demands; accept his statements as axiomatic truths and act in the supposed discharge of a trust as if they had neither part nor lot in the matter, they not only expose themselves to legal liability but also justly incur public contempt.

The only way out of a labyrinth so much like an incxtricable maze is likely to be found by gaining a clue to a proper, clearly defined dostribution of authority. Grant the Cashier or Manager a certain line of discretion within which he shall be absolute. In this we, of course take it for granted, that the individual who fills that position has been selected for his qualifications. If such is not the case the sooner he is got rid of the better,

for no amount of checking, chectmaking, zeal or astutness on the part of Directors, will disguise his follies or repair his faults. There is no desire on our part to deprive Directors of their privileges of supervison. On the contrary we would have them zealous and keen, not too timid to advance their opinions nor too confiding to shirk the trouble of acquainting themselves with what is essentially their business. Sometimes we find Cashiers not over endowed with ability but often times we discover directors utterly bankrupt as regards force of character or capacity for the intelligent comprehension of what passes before their eyes. But, withal, Directors have a certain duty to perform, and it is reasonably expected from them that they bring to bear on their deliberations, at least ordinary discretion.

In practice, a Cashier is supposed to lay before his Directors at their meetings the details of important transactions, and an outline of the whole business. In the case of accounts unduly swollen it is a proper thing to ascertain the nature of the business that requires increased accommodation and to prevent a few individuals, no matter who they may be, from monopolising the resources of the institution. Possibly reforms might be introduced of a useful character. For instance we believe it is not an unusual thing for a customer to increase the balance at his credit by drawing foreign bills, and depositing them in his bank. The bills are forthwith charged against the foreign agent of the bank, and the depositor credited with the proceeds. So that A. builds up his account by drawing bills say on England and the foreign agent of the bank appears on the bank's books to be the real debtor for the very amount which A. is using. Such a system is well calculated to deceive and we can understand how some persons have in this way been allowed to run up debts to a large amount, without the Directors knowing anything about it.

Without enlarging too much into detail we may safely assume the truth of the saying in this as in other matters that "what is everybody's business is nobody's business." Elementary principles as well as the lessons of experience drive us to the conclusion that the responsibilities of those concerned in the management of banks, where a certain amount of discretion has to be exercised are such that it is expedient to arrive at an understanding on the subject, and after a distict line of demarcation has been drawn the blameworthy can be punished, and the innocent saved from unjust imputation.

A bill has been filed in Chancery with the object of restraining the city of Hamilton from transferring the Great Western Railway stocks held by the city to the Wellington, Grey and Bruce Railway Company.

TELEGRAPHY.

The unusual activity, at this time, of Telegraph Companies in extending their wires and in enlarging their field of operations, and the appearance in our midst of a new Company, organized under the name of the Dominion Telegraph Company, prove how effectively the laws of supply and demand work, and confirm the opinions, already expressed in these column, that private competition is fully equal to the task of meeting the public wants as regards telegraphic communication. The action of the British Government in purchasing the telegraph lines of the United Kingdom, has not changed our views, for a great deal is to be said in favor of Government interference, where Companies, by virtue of their control of exclusive patents, imposed an oppressive tariff which prevented a general enjoyment of telegraphic facilities. The continued life of the patents upon the peculiar kind of instruments used in the United Kingdom required the strong arm of Goverment to accomplish a result generally acknowledged to be desirable. Here and in the United States where the Morse system has been adopted (that patent having expired), to bring about the same results of cheap rates and efficient service, nothing but a well-ordered competition need be invoked. The figures given in Mr. Scuddamore's report show how regular has been the annual increase of telegraphing in the United Kingdom. The history of the tariffs established there for the last few years is worthy of note. From 1860 to 1865 the tariff of English Companies, except for a short period of struggle between the United Telegraph Company and the London District Telegraph Company remained stationary, and during that time telegraphing increased from the ratio of one telegram to 296 letters in 1860 to one telegram to 169 letters in 1864. Early in 1865 an arrangement was arrived at between the owners of the various patents which excluded the possibility of competition and tariffs were advanced, and in some instances by the London Telegraph District Company, doubled. Notwithstanding this, the ratio of telegrams again increased in two years from 1 telegram to 169 letters in 1864 to 1 telegram to 121 letters in 1866. In Belgium the cheapening of rates caused an increase in the number of dispatches of 233 per cent., and that, too, upon wires managed solely by Government officials in the usual stolid style of that little kingdom. What it would have been had the additional stimulant of competing private interests, adopting new modes, multiplying new facilities, and dependent not on Government but the people, entered into the experience, we are left to conjecture. No modern agency of science has developed and is developing, so rapidly as the telegraph Europe, Asia, the United States, and eve the North Coast of Africa, are alive wi schemes, having for their object the increa of its facilities; continents are spanned an oceans crossed by multiplying wires.

Within our own borders much remains t be done in the way of increasing the numb of offices and the cheapening of rates. T present rates are generally regarded as hig and in some quarters this has caused t scheme of Government monopoly to be look on with favor. To such a scheme for t country we are opposed for reasons alrea made public. We believe in private com tition, and entering upon a new era of co solidated material and political advantag it is proper to encourage every legitimate terprise whose prospects seem fair, and m especially such enterprises as will yield larged means of intercommunication, produce by a healthy rivalry increased fa ties and cheaper rates.

THE NEW ENGLISH BANKRUPT ACT.

The Act amending the Bankruptcy passed at the last session of the Imperial liament is one to amend the proceeding regard to arrangement deeds. The abus such deeds were found to be mainly— want of means to prevent sham creditor senting, the power given to secured cred to vote in respect of their whole debt, the want of means to compel inquiry wh creditor suspected something wrong. T a stop to sham creditors simulating real the provision is the deposit in court of tailed list of the creditors assenting to a of arrangement with their names, addr and the particulars of their debts with a fication under oath. The list is to be borate in detail, showing the times such debts or liabilities were contract incurred, and the considerations for the the names, residences and occupation c creditors, the respective amounts due to and the securities held by them, and t timated value of such securities. The and list are to be deposited at the same It has been found that the interest of s creditors was often times disproportion the nominal amount of their debt. H little to lose in proportion to the ins creditor there was an antagonism of int the secured creditor's great anxiety be procure a speedy settlement. It is pr that secured creditors shall prove thei in the ordinary way and deduct, for th pose of compensation, in assenting deed of arrangement, the full value o securities. The remaining object is t

for the examination, as in bankruptcy, debtor, or any creditor, or any person to give information about the estate.

TREAL ASSURANCE COMPANY.

A fortnight ago we published some correlence had between the manager of this any and the Finance Department re- ng the question of deposit. As will be nbered, that correspondence shows that ompany is not required to deposit at all; deposit would have been made only uch a step would involve a considerable tion of the annual income from invest- s. A reference to the statement, else- , will make it plain that the securities could not be exchanged for Dominion bearing but six per cent., without a ce, for they are, with one or two excep- of the best class.

meeting of the Grand Trunk proprie- rs in London, called for the 27th August, about an apparently trivial matter, ep significance. The immediate ques- stake is, shall the Directors be *required* duce a list of the bond and stockholders road with their names and addresses. *ith's Journal* says the introduction of the eans a change of management. The of this meeting will therefore be looked ith interest; and hence we have been l to give the statement of the directors , that the matter may be placed fairly our readers.

last English mails report the death rcy Matthew Dove, Esq., who held the n of Manager and Actuary of the Royal nce Company from its origination. His ted decease occurred on the 24th Aug.

KER'S MAGAZINE FOR SEPT.—The contents month's number embrace an article on the tion of the U. S. debt, statistics respecting tional Banks, reports on the Savings Banks, the usual amount of banking and financial &c.

COVERY OF SALT AT KINCARDINE.—Kin- , Sept. 8.—Salt was struck here yesterday depth of 895 feet, being over 100 feet nearer rface than at Goderich. They drilled h thirteen feet eight inches of solid salt. two ordinary glasses of the brine, one and glasses of pure white salt, the same in as that Goderich has produced. There is deal of excitement in town to-day, and the y are much elated at the success of their rise.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

We have to report another quiet week in stocks, the demand still exceeds the supply.

Bank Stock.—There are buyers of Montreal at 133½ and sellers at 134½. No transactions in British. Ontario sold at 98½ and 99 and there are now buyers at 98¾. For Toronto 115 would be paid; no sales. Royal Canadian sold at 87½ to 88 and is in demand. Commerce is asked for at 103 to 103¼. Merchants' sold at 104¾ to 105¼; little offering. There are buyers of Molson's at 112; no sellers. City is wanted at 102; none on market. There are sellers of Du Peuple at 105 to 105½; and buyers of Nationale at 105½. There are sellers of Mechanics' at 98; no buyers at that rate. Union nominal at 101 to 102. Nothing doing in other banks.

Debentures.—There are buyers of Canada sterling fives at 90 to 91; sterling sixes are offering at 100½; and Dominion stock at 101. There were sales of Toronto at about 6¾. No County in market.

Sundries.—There is very little doing in Building Society stock owing to its scarcity; there were several sales of Canada Permanent at 118 to 118½; buyers would give 110½ for Western Canada; and 104 to 105 for Freehold, but there are no sales. City Gas sold at 105 and is still offering at that price. Buyers would give 132½ for Montreal Telegraph; nothing doing. Sales of Canada Landed Credit occurred at 63, which is still offered. A few good mortgages were placed at 8 per cent. Money easy on good securities.

MONTREAL MONEY MARKET.

(From our own Correspondent).

MONTREAL, Sept. 8, 1868.

Money continues plentiful, and good paper is scarce and readily taken at the banks at 7 per cent. and at times for less. I see first-class short dated paper can be done in New York at 4 to 5 per cent. So far there is very little movement of money west, but as soon as the large buyers of produce fairly commence operations, we may look for increased activity in that direction. The supply here is more than ample for all probable wants, so that no tightening of the banks may be expected. The stock and share market has been quiet during the week, prices rule high. Bank of Montreal advanced to 135. British and City nominal, former at 102½, and latter at 102. Merchants' steady at 105 to 105½. Toronto enquired for at 115, but none offering. Jacques Cartier held at 108, buyers at 106. Ontario, 98 to 98¼. Holders of Champlain and St. Lawrence stock have advanced their pretensions to 10½, and those of Richelieu Co. to 115. but no buyers at those rates. Gold has ranged during the week from 145 to 143¾, closing to-day at 144¼. Silver to-day buying at 3½, selling at 3¼ discount. This is a rise of fully 1 per cent. during the week. The demand is good, and a further advance is anticipated. The spring shipments of silver from here of about $1,200,000 are likely to tell favorably on the price during the next two months, as the stock cannot be increased from New York as in former years, the duty of 15 per cent on American silver being in effect prohibitory. Greenbacks—Selling price, 30½ to 30¾; buying do., 31 per cent. discount. Gold drafts on New York par to ¼ discount.

NEW YORK MONEY MARKET.

August has been characterised by the usual ease in the money market. The banks have held large amounts of idle funds, the deposits of the Western banks having perhaps been unusually large; and, with but a moderate demand for discounts, the supply on call has been very abundant at 3 to 4 per cent, with a brief interval of 4 to 5 per cent. About the 10th of the month there was a very active demand from the West, which continued for two weeks, causing a loss of about $10,000,000 of currency, chiefly national bank notes. This demand was to provide for the moving of the earlier grain crop in the more southern sections of the West, and was followed by a suspension of remittances. The outflow of currency almost exhausted the supply of bank bills, but had little effect upon the loan market. The loanable resources of the banks, however, were undoubtedly largely curtailed, and the fact of the rate of interest on call loans not being enhanced was perhaps due to the banks anticipating a renewal of the westward outflow in September, and holding themselves prepared for such a movement whenever it may occur. In August of last year the movement corresponded closely with that of last month, the banks sending a large amount of currency West from the 10th to the 25th of the month, after which the shipments fell off, and the rate of interest declined one per cent. But in September the outflow of currency was renewed, with the loss of a large amount of legal tenders, and the advance of the rate of interest to seven per cent in gold toward the close of the month.—*New York Financial Chronicle.*

BANK OF ENGLAND.

The position of the bank at August 19th, 1868, was as follows:

Issue Department.	
Notes issued..	£34,638,755
Government debt	£11,015,100
Other Securities	3,984,900
Gold coin and bullion	19,638,755
Silver bullion	
	£34,638,755
Banking Department.	
Proprietors' capital	£14,553,000
Rest	3,353,849
Public deposits (including Exchequer, Commissioners of National Debt, Savings' Banks, and Dividend Accounts)	2,864,234
Other deposits	20,172,244
Seven day and other bills	510,680
	£41,454,107
Government securities (including Dead Weight Annuity)	£13,790,131
Other securities	16,174,185
Notes	10,393,345
Gold and silver coin	1,096,446
	£41,454,107

COUNTERFEIT HALF AND QUARTER DOLLARS.—The public should be on their guard against taking counterfeit American half and quarter dollars, of which large numbers are at present in circulation. The milling on the edge is rather defective, and the coin is considerably lighter than the genuine.

SILVER CIRCULATION.—Mr. D. Burn, of the Northumberland and Durham Savings' Bank, gives his views about the difficulty of a surplus of silver in circulation in these words:—"I have read attentively the communications which have appeared for some time past in many of our newspapers, on the subject of what is termed 'the silver nuisance,' and have come to the conclusion that the best remedy we could adopt to mitigate the evil, would be to authorize our chartered banks to issue "quarter dollar" bills, redeemable in precisely the same way as their other bills are at present. I cannot see the slightest objection in the present position of Canada, to the issue of a currency of this denomination. At present we are nearly all together dependent upon a foreign country for our smaller currency—a dependence

which ought not to be allowed to exist; and the only way in which I think this evil can be removed is to give our chartered banks the power I have suggested. The banks, I am sure, would gladly undertake the issue of this smaller currency, for the business would be a profitable one to them, inasmuch as the circulation of bills of a quarter-dollar each could not fail to be much more extended, and continue, as the phrase is, 'longer out,' than the present circulation of bills of one dollar and upwards."

Railway News.

NORTHERN RAILWAY.—Traffic Receipts for week ending 29th August, 1868.

Passengers	$3,587 66
Freight	8,782 91
Mails and sundries	216 67
Total receipts for week	$12,587 24
Corresponding week 1867	10,057 01
Increase	$2,530 23

Traffic Receipts for week ending Sept. 5, 1868:

Passengers	$3,419 30
Freight	7,295 70
Mails and Sundries	1,168 04
Total Receipts for week	$11,883 04
Corresponding week 1867	7,067 60
Increase	$4,815 44

GREAT WESTERN RAILWAY.—Traffic for week ending 21st August, 1868.

Passengers	$33,172 74
Freight and live stock	29,046 02
Mails and sundries	2,127 26
	$64,346 02
Corresponding Week of '67.	63,052 45
Decrease	$1,293 57

WELLINGTON, GREY AND BRUCE RAILWAY.—The ratepayers of Hamilton, on the 2nd inst., voted on the by-law authorizing the transfer of the city stock in the Great Western Railway, amounting to $100,000, to the Wellington, Grey and Bruce. At the close of the polls the vote stood 720 for and 84 against.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, 8th Sept., 1868.

Since my last an increased activity is discernable in business circles, not that there are many actual transactions to report, but the desire to do business is obviously more than it has been for sometime past. Merchants appear more cheerful, and instead of the hackneyed remark, "Nothing doing," is now heard, "Business is decidedly brisker." There are many causes which will tend to soon give an impetus to trade; the certainty that the harvest is a success as far as regards the great crop, viz., wheat; plenty of money, and though last, not least, the provincial rifle match and agricultural exhibition, both of which will attract large numbers of persons from all parts of the Dominion, most of whom will combine business with pleasure, so that in ten days or a fortnight we may look for considerable activity. So far, the preparations for the exhibition proceed very quietly and unostentatiously, and except in the immediate neighborhood of the buildings there is nothing to indicate that anything unusual is going on. I am glad to note that the harvest *east* of Quebec is safely housed, and bids fair to prove the largest yield for years past.

OUR PRODUCE MARKET—Generally is dull, but for the last few days flour has been more active, prices have steadily receded since my last, considerable sales of city brands at $6, strong superfines have ranged from $6 15 to $6 35, fancy has realized in lots $6 25 and $6 45 for small parcels. The stock here is about 20,000 brls., being much the same that it was last year at this time. In grain the receipts are very light and prices not yet established; U. C. spring ex cars worth $1 35, other qualities nominal. A cargo sale of mixed corn was made at 84c. Pork is very quiet. In dairy products, butter and cheese are in demand at high rates. Western butter is worth 19c to 20c, and choice dairy 21c to 22c. Cheese ranges from 10c to 11c.

The GROCERY market is reviving, and goods of all descriptions meet with more demand. Sugars have ruled very low, but I fancy the bottom has been touched, and as prices are rather better in New York and London, we may look for increased stiffness, if not a rise here. Some parcels of teas are selling chiefly for local trade, but large buyers and Western men will hold off till the cargo sales. A number of the fall auctions are already advertised, they take place rather later this year than usual. The first will be held to-morrow. It is a cargo sale of Mediterranean goods on account of Messrs. Reuter, Lionnais & Co. I give you the names and dates of the other sales, as it will interest your Western subscribers:—September 29, Victor Hudon, and Rimmer, Gunn & Co.; September 30, Buchanan, Leckie & Co.; October 1, D. Torance & Co., and Chapman, Fraser & Co.; September 2, A. Urquhart & Co. D. Torance & Co's is purely a tea sale, the others comprise all sorts of groceries, two of them chiefly of Mediterrancan goods imported direct.

DRY GOODS.—Our importers are very busy. Next week I shall be able to write you more fully, as then the prices of the fall trade will be over, and I will be in a better position to draw a comparison between the amount of business done this year and the preceding ones.

HARDWARE—*Imported.*—Generally speaking trade is more than usually dull at this period. Some few houses have, nevertheless, been fully employed. It is expected that there will be plenty of buyers in about a fortnight, and considerable activity. Imports have been light, and although prices during the last five weeks have run down, it is expected that a change will take place and the market will stiffen, if not advance. The assortment here is excellent.

Home Manufactured.—The mills have been running full time all summer, exeept some few that had to stop during the intense heat. A ready sale is expected for all produced, there being sufficient orders on hand to pretty well work off all that can be turned out before the close of the season. Prices generally have been well maintained, and the trade altogether is in a healthy state.

Toronto Market.

The past week has witnessed a general opening up of the fall trade in all the leading branches. A great many county and town buyers from the various sections of Ontario, have been or are now in market, and the principal houses are exceedingly busy.

DRY GOODS.—In this branch the season has begun well; importers are looking hopeful, and now speak of a successful fall trade. A very considerable amount of goods has already been placed satisfactorily, and still the season is only fairly commenced. In view of the present hopeful views of buyers, and the early opening of the trade, we may fairly expect a good average business at least; the state of the weather, and other unforseen contingencies, may have a marked influence on the aggregate result. *Woolen Goods* are moving off freely at unchanged prices. Even Canadian Woollens, which it was expected would go slow, owing to the pretty full stock of these goods on the shelves of country merchants, have met with a fair demand; but this may be largely accounted for by the superior style and finish given them as compared with previous years. *Cottons* are firm and selling at full prices, the tendency being upward. We give the importations of dry goods at the port of Toronto for the month of August. These figures pretty well indicate the course of the trade thus far. It will be seen that due caution has been exercised, and the probability just now is that we shall not have such an accumulation of stock to hold over the coming winter, as we did that of 1868. We have no desire for the recurrence of such a gloomy state of affairs as existed at the beginning of the current year in this branch.

Imports of Dry Goods for August.

	1867.	1868.
Manufac. of Woollens	$304,785	$241,510
Do. Cottons	189,049	160,968
Do. Silks & Velv'ts	39,869	42,439
Do. Fancy Goods	14,942	7,557
Wearing Apparel	1,092	24
	$549,737	$452,498

BOOTS AND SHOES.—The houses in this line have had a busy week. Buyers are operating freely in anticipation of good demand for a seasonable goods. Prices are a shade lower than last week.

GROCERIES.—Trade is also brisk in this branch. *Sugars*—Continue to rule low, and importers profits are now cut very fine. The market is entirely in favor of buyers. *Teas*—Are steady in price and without noticeable charge. We give the importations *entered* at Toronto for August of a few the leading articles.

Imports of Groceries for August.

	1867.	1868.
Sugar, lbs	482,124	325,027
Tea, lbs	20,749	73,32(
Tobacco Manufactured, lbs.	4,690	6,22:
Coffee, lbs	10,839	10,17:
Confectionery	45,839	37:

LIQUORS.—We have no change to note in price a full trade is reported at quotations.

Imports of Liquors for August.

	1867.	1868.
Wine, gallons	6,241	$1,78
Brandy, "	283	5,68
Gin, "	207	99
Rum, "	593	3
Whiskey "	177	-

LEATHER.—There is more doing this w though the trade is still quiet and prices stat ary.

PRODUCE.—Owing to the dullness of lea markets for breadstuffs and barley, and a fal off in the receipts, there was less business done mediately in this market during the past s days. *Wheat*—Has gradually receded to quotations, and closed dull but steady. The little demand and only small lots offering. S of cars were offered at $1.20 to $1.25 for spr and $1.30 for fall. *Barley*—The receipts fo week from all sources would foot up to about 000 bushels, being about 10,000 bus. less thar previous week. Prices opened at 93 to 95c. improved somewhat, closing at 95 to 98c.; sales of car loads were reported within this r and several cargo lots changed hands at abo to 98c.; there is a general dispotition to keep t private. There are still sellers at 98c. f.o.b. port on the Bay of Quinte. *Peas*—A carg was offered at 98c. f.o.b. with 95½ offered, no *Oats*—A small trade was done in car loads to 51c., the market closing with sellers at 51c. and buyers at 48c.

FLOUR.—Receipts light; superfine dull; is a moderate demand for shipment to the L Provinces. A lot of 500 brls. choice sup sold at $6, and 1,000 brls. spring extra on while 100 brl lots of ordinary sold at $ superior and extra not much wanted; a l

perior was offered at $7.25 and only $6.50 bid.
tmeal—Only a local trade doing at quotations.
HARDWARE.—There is more doing, but the ason will not fully open before toward the end the month. Importations will be moderate, t ample. *Iron*—New stocks will be to hand in week or ten days, when the assortment will be tter than at present.

PROVISIONS.—*Butter*—Receipts are light and ere is little doing. The late rains will tend to crease the production which was unusually light ring the season so far owing to the excessive ought and the scarcity of pasture and green d of all kinds. There are moderate stocks in e country, but very little in first hands. It has en almost wholly bought up by jobbers and eculators who hold ordinary store packed lots in antity, firmly for 22 to 23 cts. per pound. ese figures exporters will not pay at present, d hence business has been confined within a ry narrow compass. Not more than 18 to ets. is now offered. *Cheese*—There is very lit- in the country, and it is held for 10½ to 11½ cording to quality. The home market is just w very dull, and there is no disposition to y for export, especially at the high prices t quoted. Respecting the condition of the w York market the *Shipping List* says "The eese market continues dull, with slight concess- ns on the inferior grades. Unlike butter the ceipts of cheese continues large, and either enter rectly into consumption or are taken by ex- rters. While the make of butter in this State y be safely calculated at an increase of one-third e make of cheese is correspondingly decreased. e severe drought in Europe—in largely reducing eir crop of dairy products—cheese particularly, ves a wide additional demand for American eese over previous years, and with a smaller oduct, low prices can hardly prevail during the esent season, and will be found difficult to gineer or force." *Eggs* are quiet at 10 to 11 cts. *at meats* nominal. *Pork* no stock; market changed.

LIVE STOCK—The receipts of cattle have been neral during the week, and include heavy arrivals m the western part of Ontario. The most of ese offering have been taken up for shipment to ontreal and Quebec. First class have met with brisk demand, being relatively scarce and sold high as $6 50 including beef, hide and tallow. the second quality there was an abundant sup- y, and for these we quote the average price 5.00: inferior were also freely offered and met th little demand. The bad state of the pas- res during the hot weather has caused an undue roportion of poor cattle to be brought into arket. *Sheep* were plentiful, throughout the eek and at the close there was a large supply fering; we quote prices $4, $3 and $2 50 for st, second and third qualities respectively. *mbs* were also freely offered, selling at $1 50 to 2 50 as to quality. *Calves* are scarce being con- dered out of season, not much demand, they are rth $4 to $6 each. *Hogs.*—In the market for ve hogs we note a fair demand, a sale of a lot of od hogs numbering 77 head is reported at 6 cts. r pound live weight. Packers think the market nnot be maintained at so high a point. At esent ice-cured bacon is quoted at about 62 shil- ngs in Liverpool, but as the season approaches hen dressed hogs can be packed and shipped, at market must recede owing to the increased pplies which will pour in.

HOPS.—The new crop is beginning to arrive, d good samples are held for 30 cts.

PETROLEUM.—As the season advances and the mand increases, the market acquires firmness. The following were the exports of petroleum om the principal United States ports from the st of January to the 1st September in the years amed:—

868, gallons	.....	65,747,702
867, "	.....	40,615,172
866, "	.....	38,849,974
865, "	.....	11,955,029

Havana Sugar Market.

August 28.—SUGAR.—*Clayed.*—There has prevailed much more dullness during the week under review than of late, the same having been increased by the continued unfavorable quotations transmitted per cable from London and New York. The business of the week comprises the few sales we notice below, which have been closed for the greater part on the basis of 7½ to 7¾ rs. per arrobe for Number 12. To-day, however, buyer's offers do not exceed generally the former figure, but they continue to meet with very few sellers, as the majority of these seem to pay little attention to the adverse news received from abroad, according to which buyers cannot afford to grant higher prices than those they offer at present. The market, therefore, closes very dull, and in view of the last sales of good dry sugar our last quotations, based on 7¾ rls. for No. 12, must be reproduced to-day nominally, stating, however, that there are no buyers on that basis nor sellers at a lower one.

Trade in Chicago.

SEPT. 1.—The past week has shown an active business in all branches of trade centering here. The receipts of grain continue at a daily average of over four hundred thousand bushels of Corn, Wheat, Oats, Barley and Rye, which is about the full carrying capacity of the roads tapping the districts from which the crop is being marketed. The receipts from Wisconsin and Minnesota are, however, comparatively insignificant yet. During the week the movement of grain Eastward has been very free, preventing any accumulation here, to which fact is, in one respect, due the ease with which the banks have worked through such a heavy business. The business in Dry Goods, Groceries, Lumber, etc., is now more active than at any time since last summer. The increase of trade is reflected in the aggregate of the week's business at the Clearing House, which, as shown below, is nearly double what it was five weeks ago, being a little over ten millions for the week ending August 1st. The report for the week ending to-day is as below:

	Clearings.	Balances.
Aug. 31	$2,787,489 41	$238,036 04
Sept. 1	3,216,356 08	279,204 03
Sept. 2	3,620,052 85	328,835 00
Sept. 3	3,002,777 98	224,610 73
Sept. 4	3,182,548 94	254,558 34
Sept. 5	3,079,556 72	367,282 62
Total	$18,888,781 98	$1,692,526 76
Last week	16,771,282 78	1,448,842 10

Money has worked close, but with more freedom during the latter part of the week. The increased promptness of country collections has relieved the necessities of merchants, so that they are calling for comparatively few accommodations, while at the same time an increase in deposits is noticed at the banks having the largest lines of mercantile accounts. The movement of currency to the country has been large during the whole week. Owing to large receipts from New York to-day there was a good supply, but large amounts are being paid out over the counter, to commission men, who are forwarding by express to grain buyers in the country. Orders from country banks also continue, so that, altogether, the estimate of two millions is a small one for the outflow of currency from this city, for the past week.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s Circular, dated Georgetown, Demerara, Aug. 7th:

We have had a wretched dull fortnight; complete stagnation in every branch of trade. Food of every kind is in excess, and the great decline in prices will entail heavy losses on importers. The arrivals since our last comprise seven vessels from United Kingdom, three from United States, seven from British Provinces, and eight schooners from the Islands.

IMPORTS—BREADSTUFFS.—Last mail we were called upon to report arrival of heavy stocks, including 5,500 brls. Flour, 1,100 brls. Bread, 800 brls. Meal, &c., &c., most of which remain unsold, this fortnight further supplies have come to hand to the extent of 3,500 brls. Flour, 1,100 brls. Bread, 700 brls. Meal, &c. The Market is very flat.

PROVISIONS.—We have received by the same vessels 400 brls. Pork, Rump, $24; P. Mess $20 to 22; Mess, $25 to $26; C. Mess, $27; 200 half brls. Beef $11.75 to $12.75; Cheese, $12 to $14; 800 pails Lard, $4 to $4.12; French Butter has sold in small lots at $18.

EXPORTS.—SUGAR—The amount offered for sale during the fortnight has not been large, and many Merchants holding orders have been afraid to operate for fear of falling short after vessels are chartered, up to yesterday from $6.50 to $6.75 was paid for choice samples V.P., but the news from America by the the mail this morning not being favorable, only $6.25 was bid at the public sale, the lots were all withdrawn; we do not expect any high range of prices during the coming fortnight.

MOLASSES—Is to day quite neglected, although sales were made previously at 30 to 32 cents.

RUM.—There have been some transactions for the British Provinces, but prices show no improvement.

SUGARS (package included) sold by 100 lbs. Dutch, 10 per cent. tare F. O. B., in hhds of 1,800 lbs.

Muscovadoes, equal to No. 8 Dutch Standard, $4 per 100 lbs.; No. 10, $4.25; No. 12, $4.50; Vacuum Pan, equal to No. 12, $5.75; No. 14, $6; No. 16, $6.20; No. 18, $6.40.

MOLLASSES (package included, by Imperial gal.) in puns. of 100 gals. Muscovado, from 20 to 26 cents, as to color and density; Vacuum Pan, from 26 to 30 cents.

RUM (colored, package included, sold by Imperial gallon, in puns. of 100 gals., from 35 per cent. to 38 overproof 38 to 40 cents; from 38 per cent. to 40 overproof 40 to 45 cents.

FREIGHTS.—Have been in a very depressed state, and have shown no animation since our last advices. 1s. 9d. is still the nominal shipping rate, but not over 1s. 3d. could be had on Charter, the quantity of Produce coming forward for the United Kingdom is so small, that one vessel on the birth for each Port is quite sufficient for present requirements.

WEATHER.—Has been much too dry, and if the wet season breaks up now Estates will suffer severely as the fall of rain has not been sufficient to enable them to stand the approaching dry season of four months duration.

Reciprocity.

An announcement was lately made in the public prints to the effect that Mr. Seward had been for some time past in correspondence with Mr. Thornton, the British Ambassador at Washington, on the subject of a new Reciprocity Treaty, and it was also hinted that our Minister of Finance was about to proceed to Washington to consummate the understanding arrived at. The New York *Albion* thus refers to the subject:

We are now able to state, on the best authority, that there is not a word of truth in the report. What the object of this semi-official announcement was, it is not for us to even conjecture; but certain it is that the Republican party is held *responsible*, by more than one indignant community, for the crabbed and ill-tempered repeal of the late treaty; and now that the Presidential election is rapidly approaching, this announcement may have been made in the interests of *that party*. Be this however, as it may, we are persuaded that time alone is necessary to convince our American cousins that their Government did a very unwise act when it abrogated the old treaty; and it is not unlikely, by any means, that Mr. Seward is now actually contemplating the course now only *prematurely* attributed to him.

New York, Boston and Portland, all feel the loss of the trade which reciprocity gave them; as well as the interior cities of Chicago, Milwaukee, Detroit, Toledo, Cleveland, Buffalo, Oswego and Ogdensburgh; and whenever the boards of trade of those cities combined, choose to move in the matter, neither the Treasury Department or the State Department at Washington, can effectively resist the pressure. In fact this pressure is sure to come sooner or later; but now that the New Dominion has arranged its commercial affairs to meet the changed condition of things, it is perhaps as well that it should remain as it is until entire free trade with Europe can be adopted, when the United States may ask in vain for a new treaty.

Halifax Market.

Halifax, 1st Sept.

BREADSTUFFS.—Flour steady and in fair demand at $8.00 to $8.25 for No. 1 Canada; $8.75 for good extra; extra State $8 to $8.20; Baltimore superfine $7.25 to $7.75; Baltimore extra $8 to $8.50. Rye, dull at $6.50 to $6.75. Meal dull at $4.75 to $4.80 for kiln dried, $4.50 for fresh ground. Oatmeal dull, at $8.75. Imports from 1st January to September 1, 1867 and 1868.

	Brls. Flour.	Brls. Cornmeal.
1868	121,000	39,231
1867	109,460	28,557

FISH.—We have no material change to note in dry codfish. Large shore $3.80 to $4; small hard cured from store, $3.10 to $3.25. Haddock, $1.75 to $2. Salmon still continue dull at $15 to $16 for No. 1's; $14 for No. 2's, $9 50 to $10 for No. 3's. Mackerel—No. 3's improving; No 1's or 2's in market; No. 3 sold at $5.85, and some holders are asking as high as $6. Herrings quiet at $3 80 to $4 for shore split. Alewives $3.50 to $3 75.

OILS.—Cod has improved, and sales made during the week at 46c; prices are now firm at 45c to 47½c. Seal unchanged. Kerosene quiet, 38c to 40c for American.

WEST INDIA PRODUCE.—Without any change. Sugars—Holders asking 6¼c to 6½c for Porto Rico; 5⅞c to 6c for Cuba, and 6c to 6¼c for Barbadoes in bond. Molasses—Cienfuegos 29½c to 30c in bond. Rum—Demerara, 52c to 53c; St. Jago, 43c in bond.

FINANCIAL.—Bank drawing rate on London 60 day bills 13 per cent prem.; Private 12 to 12½ per cent prem. New York gold drafts at sight, 4 per cent prem. Currency drafts 27 per cent discount. Montreal sight drafts 4 per cent prem. Newfoundland sight drafts 5 per cent prem.—*R. C. Hamilton & Co.'s Circular.*

Telegraphs.

A special report in connection with the Electric Telegraph Bill has just appeared, which includes, among other interesting particulars, a statement showing the mileage of railways under agreement with the Telegraph Companies, and the number of years which the agreements have to run, as well as the mileage of wires on such railways. A summary of the statement shows there are 1,280 miles of line and 4,226 of wire under a term of agreement of from six to ten years; 3,211½ miles of line and 13,397 of wire under a term of agreement of from 11 to 20 years; 340½ miles of line and 1,247 of wire under a term of agreement of from 21 to 30 years; and 4,650 miles of line and 1,556 of wire with a term of agreement of from 31 to 99 years—making a total of 13,470 miles of line and 54,744 of wire, under various terms of agreement with the telegraph companies, the average duration of these agreements being 26⅔ years per mile of line, and 25½ years per mile of wire.—*Herepath's Journal.*

Cable Telegrams.

The tariff on Atlantic cable telegrams from New Brunswick, has been changed as follows:—From any station in New Brunswick to any station in Great Britain and Ireland, for ten words, sixteen dollars and thirty-five cents; for each additional word, one dollar and sixty-three cents.

Grain Trade of Hamilton.

The following shows the receipts and stocks of grain at Hamilton up to the 5th September:—

	Receipts.	Stocks.
Barley, bushs.	73,480	8,486
Wheat, red, bushs.	10,466	10,466
" white, bushs.	1,367	1,367
" spring, bushs.	562	562
Peas, bushs.	11,450	11,450

The only shipments to that date were 64,994 bushels barley.

Produce in New York.

The following table gives the stock of grain in warehouse in New York and Brooklyn, August 31, 1868:—

Wheat, bushels		290,512
Corn	"	2,089,480
Oats	"	336,654
Barley	"	585
Malt	"	101,603
Peas	"	37,786

The Customs Department has given notice that after the 1st October, forms for reports and entries will not be supplied gratuitously, as hitherto, to the public.

NEW INSOLVENTS.—The following insolvents were gazetted last week: Thos. H. Roffe, Stratford; Wm. Buchanan, Menzea; Chas. Penrose, Lindsay; J. A. Bawthinhimer, Brantford; Jacob Robbins, St. Catherines; John Bouskell, Port Hope; J. & P. Judge, Harveyhill Mines; John Northey, do; Geo Cochrane, Cobourg; Wm. Grafton, Blanshard; Adam Thompson, Kingston; Jos. Bradley, Guelph; John Dickson, Maryboro.

DAY'S

Commercial College and High School,

No. 82 KING STREET EAST,

(*Near St. James' Cathedral.*)

THE design of this institution is to prepare Young Men and others as Book-keepers, and for general business, and to furnish them with the facilities for acquiring an excellent

English and Commercial Education.

Mr. DAY is also prepared to give Private Instruction in the several subjects of his department, and to assist Merchants and others in the checking and balancing of books, adjusting their accounts and partnership affairs, &c.

For further information, please call on or address the undersigned.

JAMES E. DAY,
Accountant

Toronto, Sept. 3rd, 1868.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balauce to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

CABINET FACTORY FOR SALE

BY

PUBLIC AUCTION.

THE ATTENTION OF

CAPITALISTS AND OTHERS,

IS INVITED TO THE PROPOSED

Sale by Public Auction,

OF THE

Extensive and Well Known

CABINET FACTORY AND PREMISES,

OF

EDWARD MIALL & Co. (LIMITED),

OF

OSHAWA, ONTARIO.

THE Premises comprise about Three Acres of Land, a substantial three story BRICK FACTORY, 144 x 40, Engine House, Dry Kiln, separate therefrom, and other Outbuildings.

The plant is of the best and newest kinds, embracing all the most approved machinery of the day, in full running order. As the Factory is now in operation, with a full supply of materials and workmen, no delay need be experienced by a purchaser.

The Village of Oshawa is on the line of the Grand Trunk Railway, 30 miles east of Toronto, and it has an excellent harbour on Lake Ontario. The country surrounding is one of the oldest settled parts of Western Canada. Living is cheap, and every facility is afforded for carrying on a rapidly increasing manufacturing business. In 1867 the profits of the business reached $18,435.82.

The undersigned having come from England, solely for closing up the estate, the sale will be WITHOUT RESERVE. The Stock in process of Manufacture to be taken at a valuation by the purchaser, he having the option of taking the manufactured stock and lumber also at valuation.

SALE AT

PRINGLE'S HOTEL, OSHAWA,

WEDNESDAY, 23RD SEPTEMBER, 1868,

At 12 *o'clock, noon.*

The vendors are prepared to receive tenders for purchase by private sale, and to offer very favorable terms of payment.

Further particulars may be had by application to English & Foster, Solicitors, Toronto; Carter & Hatton, Advocates, Montreal, or to the undersigned, care of "Edward Miall & Co., (limited)," Oshawa, Ontario.

R. RUMNEY,
Chairman.
S. D. WILLIAMS,
Secretary.

Engines and Boilers of all sizes, and Mill Machinery OF EVERY DESCRIPTION ON HAND.

Send for Circular and Price List. 31-6m

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark*; 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

THOS. W. JOHNSON,
At American House,
Boston, Massachusetts.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company :—

"*To whom it may concern*:..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country, has been steadily prospering. The *Massachusetts Insur Reports* show that in nearly all important matters superior to the general average of Companies. It offe intending assurers the following reasons, amongst o for preferring it to other companies:

It is purely Mutual It allows the Insured to tr and reside in any portion of the United States and Eur It throws out almost all restriction on occupation fro Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note all cash company. Its Dividends are declared annu and applied in reduction of Premium. Its Dividend in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for year the policy has been in force. The number of dends will always equal the outstanding Notes. It pay losses promptly—during its existence never having tested a claim. It issues Policies for the benefit of ried Women beyond the reach of their husband's credi Creditors may also insure the lives of Debtors. Its Pol are all *Non-forfeiting*, as it always allows the assure surrender his Policy, should he desire, the Company ing a paid-up Policy therefor. This important fe will commend itself to all. The inducements now of by the PHŒNIX are better and more liberal than thos any other Company. Its rate of Mortality is exceedi low and under the average.

Parties contemplating *Life Insurance* will find it to interest to call and examine our system. Policies is payable either in *Gold* or American currency.

Meetings.

LONDON AND PORT STANLEY RAILWAY.

The report of the Directors read at the Annual Meeting held on the 2nd Sept., is as follows:—

Your Directors, at the close of another financial year, have the honor to present the following statement of receipts and disbursements and other returns in connection with the business of the road:—

The total receipts from all sources is $41,704.62, being a falling off from last year's revenue of $981.72. This amount of deficit is less than might have been expected from the very dull state of trade consequent on the failure of the Commercial Bank and the general mistrust and stagnation that followed in its wake.

The revenue account is made up of the following amounts, viz.:—Passenger traffic, $16,968.93 as against $17,308.23 last year; a decrease of $339.30. Freight traffic, $22,410.40, against $23,064.76 last year; a decrease of $633.36. The balance of receipts, $2334.29, is from mails and sundries. The total number of passengers carried was 42,-704, a large proportion of which were excursionists, being a decrease as compared with the former of 1,122 passengers. Total freight carried: 22,-868 tons, against 25,542 in 1867; decrease of 1,674 tons.

The working expenses have been unnecessarily high, as foreshadowed by the last annual report, in which reference was made to the necessity of large outlays for reconstruction of bridges, repairs to passenger and flat cars, and also to engines.

The working expenses, including all outlays for rebuilding bridges, repairing and painting three first-class passenger cars—a thorough repair, amounting, in fact, to a rebuilding of the engine Lawrason—new iron water tank at St. Thomas and general traffic expenses, amount to $36,463 02, being about 87 per cent. of the gross earnings. The expenses for the coming year will be proportionately as heavily as the last, as there will be a considerable outlay to meet the following requirements: Say 200 tons of new iron, the strengthening of trestle bridges at Kettle and Mill Creeks, and at Union, the renewal of cattle guards at the level crossings, besides the ordinary wear and tear on works, rolling stock, and fences.

The works and plant are in good ordinary working order, as evidenced by the fact, that the traffic has been worked without any accident or detention during the year. We might note as worthy of remark, that since the opening of the line in October, 1856, all the trains have been run with regularity with the exception of one, which was withdrawn on account of the intense severity of the weather, it being impossible for the employees to work. The whole of which is respectfully submitted.

(Signed,) MURRAY ANDERSON, President.

GRAND TRUNK RAILWAY.

A special meeting of the bond and stockholders was held in London, August 26; Mr. T. Baring, M.P., in the absence of Mr. Watkin, in the chair.

The chairman said that certain queries in relation to the business of the meeting—namely, the supplying of the list of the bond and stockholders to any proprietor asking for the same—had been sent out to the shareholders, and it was now his duty to read a statement of the result. The first question put was, "Shall a list of the proprietors of stocks or of bonds, or both, be printed every year?" To this 416 persons, representing £918,-050, said "nay," and 235 persons, representing £965,000, said "yea." The second question was "Shall a list of proprietors be supplied to any bond or stockholder on payment of the cost of copying the same, or of some small sum for covering the expense of printing." The answers were 425 persons representing £1,228,734 of stock, said "yea," and 199 persons, representing £423,946, said "nay." The third question was, "Shall the company abide by the board's offer of sending out for any stock or bondholders circulars from the office without supplying any list?" To this 219 persons, representing £643,313, said "nay," and 244 persons, representing £476,655, said "yea." In consequence of these answers, he now had the honor to propose the following resolution: "That a list of proprietors be supplied to any bond or stockholder on payment of the cost of copying the same."

A good deal of discussion followed in reference to the expense of obtaining the list. The chairman said the cost would be about £3. Different speakers made their views known to the meeting in reference to the particular matter in hand, but in regard to the entire management which some critised with with great severity. Sir R. Jarvis at the conclusion of a somewhat lengthy speech, moved an amendment to the effect that the Directors should prepare a list of the proprietors, and that any shareholder or proprietor who might require a copy of it should be supplied with one on the payment of a fee of half-a-crown.

In the remarks subsequently made, one of the shareholders accused Mr. Watkin of assuming to fill the office of President of the company, to which Mr. Baring replied that there was always a "president" of the company, the first being the Hon. John Ross, of Canada, and no alteration had ever taken place in that respect.

The amendment was finally put to the meeting and carried unanimously, and on being put as a substantive resolution was passed with a rider appended. The resolution ultimately stood as follows:—"That a printed list of proprietors be immediately supplied to any bond or stockholder on the payment of a sum of 2s. 6d. per copy, and that a list of shareholders and bondholders, with their addresses, as far as can be ascertained, be printed and circulated once a year with the report."

After a vote of thanks to the chairman, Mr Creak said that as the chairman of the committee through whose instrumentality the present meeting was called he wished to say that it was quite possible that within a very short time the committee might be compelled to appeal to the proprietors, and when they did so he trusted they would receive their most hearty support in trying to improve the management of the company. The proceedings then terminated.

Port Hope has decided to grant a bonus of $30,-000 for the extension of the Port Hope and Lindsay Railway to Beaverton on Lake Simcoe.

Insurance.

INSURANCE MATTERS IN MONTREAL.

(From a Correspondent.)

MONTREAL, Sept. 15, 1868.

I wrote you last week the details of a very *peculiar* transaction in which the Liverpool, London and Globe Insurance Company prominently figured. I hear the amount of premium received on the $4,000,000 was $50,000. By way of further shewing the keenness of competition here, the country agent of an English Company took a risk on a saw mill at 10 per cent. premium, the office here not liking the risk, reinsured it in a good company for 3 per cent. It has often struck me as strange that we have not a good Marine Insurance office established in Canada. I am sure it would pay, as it is astonishing the large sums remitted to the States to pay for marine risks. Our present Canadian Offices have not the capital to do a tithe of the business, and thus large sums have to be sent out of the country, benefitting neither the community nor the Government, as the American Marine offices pay no taxes, nor have they to make any deposit the same as Fire and Life offices.

FIRE RECORD.—Goderich Sept. 9.—Another very destructive fire occurred here which consumed the tannery, with contents, of Messrs. Seegmiller, together with the dwelling house of J. Seegmiller. Most of the furniture was removed from the dwelling house. There was an insurance of $1100, which is far below the loss.

St. Johns, Sept. 2.—The St. Johns (Q.) *News* of a late date says:—"In the early part of the week, fires had been lighted in the woods adjoining the parish of St. Sebastien, and owing to the prevailing winds, spread rapidly over a vast area until it reached the farms of the Lamoureux range. Houses, barns, outhouses, fences, pickets and immense quantities of wood and grain were consumed. Twenty-five buildings of different kinds were destroyed. Among the sufferers are Messrs. Jules, Joseph and Julien Lamoureux, Bernard, Dupuis, Cyr, Dagenais and Chouinard. Several of the victims were left totally destitute by the lamentable occurrence.

Arran, Grey Co., Ont., Aug. 28.—The barn of Mr. Fawcett, of 10th Concession of Arran, was destroyed. The exact loss is not known, but as there was a large quantity of hay in the building at the time, it is doubtless heavy. No insurance.

Shipley, Ont., Aug. 29.—House and barn of Thos. Mulvey, and contents, including proceeds of the harvest; loss heavy; no insurance.

Portsmouth, Ont., Sept. 9.—P. Quinn and R. Howard's houses. The origin of the fire is mysterious, the last tenants having left the day previous; the fire also commenced in a part of the house vacant for some time. The building is insured for $1,200, which is said to be above the value. The house destroyed belonged to Mr. Howard and was insured for $500. So certain are the neighbours that this fire was the work of an incendiary, that they have decided to demand a Coroner's investigation into the matter.

Owen Sound, Ont., Aug. 27.—During a heavy storm the lightning struck a large barn belonging to D. Davis, junr., of Sydenham, which, with two large frame sheds, was rapidly consumed with the crop of 145 acres—value $2,500; no insurance.

Harriston, Ont., Aug. 29.—The barn, stable and and sheds on the premises of Mr. Webb, occupied by Thomas Nevans, were totally destroyed with about 120 bushels or wheat, and Mr. Nevans' farming implements. Mr. Nevans' loss will be about $600—no insurance. It is not known whether the proprietor had the buildings insured or not. Origin of the fire unknown.

Wareham, Grey Co., Ont., Aug. 28.—Part of the outbuildings, crops and farm implements, of N. Battrick, were destroyed by fire, which originated from some burning stumps; and had it not been for the arrival of assistance, the remainder of the crop, outhouses, and the dwelling house and store, etc., would have been consumed. His loss will be about $500, on which there was no insurance.

MARINE RECORD.—Pieton, Sept. 10.—A small schooner, named the *Dolphin*, was capsized and sunk in the gale on Monday evening. There were four men on board at the time of the accident, two of whom were drowned.

FIRE ENGINE FOR STRATFORD, ONT.—A public meeting was held at Stratford a few days since, to consider the expediency of purchasing a new fire engine in place of the present one, which is considered inefficient. A large majority were in favor or the purchase if favorable terms could be made.

PEDDLAR *vs.* THE DAILY NEWS.—The *News*, of Montreal, in a recent article, confesses that it was led into the publication of the article complained of by the plaintiff respecting the Etna Life Insurance Company, of Hartford, by false representations, and makes an apology, which it is supposed will lead to a settlement of the affair.

OCEAN MARINE LOSSES FOR AUGUST.—The table of marine losses upon the ocean for the month of August, gives an aggregate of thirty-two vessels. Of this number three were ships, eight were barks, ten were brigs, and eleven schooners; of the above three were missing, supposed lost, and two sunk after collision. The total value of the property lost and missing is estimated at $948,000.

The following table gives the losses from the 1st of January up to the present time, as compared with the three preceding seasons:—

	Vessels.	Tons.
Total losses for January	43	$2,479,400
Total losses for February	32	1,648,000
Total losses for March	30	1,478,800
Total losses for April	41	1,041,000
Total losses for May	22	519,000
Total losses for June	22	1,364,000
Total losses for July	6	202,000
Total losses for August	32	948,000
Total for eight months	228	$10,600,000
Same period in 1867	455	15,455,000
Same period in 1866	267	18,664,800
Same period in 1865	243	19,738,000

AN INCENDIARY FIRE MARSHAL.—In a recent number we mentioned that the city of Montreal, desirous to imitate our system of holding inquests upon conflagrations, appointed two fire marshals for the purpose—gentlemen who, being lawyers, had no other qualification for the appointment than that of being expert in matters of evidence. Thus to perform the rougher duties of the office a deputy was required, and it was thought that a proper person was found in a Mr. J. C. Davis, of whom it is now said that he fled from this city to avoid a charge of perjury, while employed here in the excise service. However little truth there may be in the latter allegation, he seems to have terribly overstepped the functions allotted to him in the former. He was of an enterprising character, and determined to supply the deficiencies that led to inactivity by promoting a crime that he was commissioned to suppress, so he became the incendiary as well as the deputy marshal.

It appears that this Mr. Davis has been adding to the conflagrations of the New Dominion by setting fire to the houses of Montreal, and then in virtue of his office entering upon inquiries into the cause of disaster as gravely as if he were a spotless judge. However great the energy with which the enquiry was affectedly pursued, the crime was not adroitly practiced; for the delinquent was detected, and it was found that many of the fires upon which he held a sort of judicial inquest were the work of his own hands, and he is now under arrest to answer for his guilt.

Thus, added to the disqualification of the two legal fire marshals for the discharge of the duties to which they were appointed by an indiscreet Common Council, a still more unfortunate selection was made in that of Davis, who with a deep shade upon his character, retreated from this city in the hope of finding refuge amongst a people by whom he was unknown. Why this utter stranger should have been preferred by the marshals to the many competent persons for the incumbent duties which Montreal must contain is somewhat incomprehensible, but we should hope that the result to which it has conducted will promote a complete reform in the original appointment, so that a fire marshal will be chosen who will be competent to perform the duties without a deputy as his principal. —*N. Y. Insurance Journal.*

INSURANCE DEPOSITS.

The *Post Magazine*, in reviewing Supt. Barnes' last report, and referring to the required deposit of $100,000 for the protection of policy-holders by new life Companies, says: "It would be a capital improvement of our own system of forming Insurance Companies if a deposit of a like sum were enforced. The advantage of it, the Superintendent says, has been abundantly justified by experience in the United States; and he seems disposed to recommend an increase of the amount."

THE PHILOSOPHY OF LIFE INSURANCE

It is a distinguished characteristic of man in a state of civilization that he takes some thought of the future—not living, like the American Indian, careless of to-morrow's fire, content with the evil and pleasures of the day. One of the necessities of American society, as well as that of all other highly civilized countries, is Life Insurance. The man who has lived in such a country has learned the necessity of anticipating the future and providing against its contingencies—the periods of sickness, the affirmities of age, and the comfort of those who depend upon him. Our male population are emphatically a race of producers. The fortunes and support of a great majority of our families are in the productive brain or hand of the paternal head. When that is taken away how often does it follow that the widow and children are suddenly reduced to want—dependent upon their own exertions for support! The first public office for the insurance of lives is said to have originated with Rev. Wm. Anhott, D.D., of Middleton, in Lancashire, England, about 1698, for the benefit of widows of clergymen and others. The poverty in which clergymen leave their families has become proverbial, and it is not at all strange that the subject of Life Insurance should first have been thought of in connection with this prominent class of unfortunate widows. They were pre-eminently dependent upon their husbands for support; but no more so than the families of every laboring man in this country to-day. The life of every man has a value; not merely a moral value, as weighed in the scale of social affection and family ties, but a value which may be insured in money or productive capital. It is to replace the loss of such a resource that Life Insurance was first thought of, and many a dependent family, which has been deprived of its head has felt no emotion of gratitude toward the great and good men who first conceived the idea of Life Insurance, and who, after much toil, and scientific research, gave an idea to the world in the form of a fact, at once available to all. The inheritance secured by Life Insurance, which at the death of the husband, descends to his wife and children, confers a benefit not only on the widows and orphans, but on society at large by preventing their dependence on the charities of the public, the breaking up of the family relation and the destruction of home. If every husband and father would thus leave to his wife and family an inheritance, poverty would be confined to narrower bounds and the national prosperity would be advanced.

That modern organization, known as the S

nce Congress, which loves to discuss all ques- relating to the present welfare and future piness of the human race, should not forget at ext meeting, to take up the subject of Life rance. How essentially it promotes the hap- ss of domestic life, how cheaply it secures an ritance to the poor, and how efficiently it pro- the rich against the caprices of fortune and precariousness of wealth! How considerately ers support to old age, and the means of ad- ement to youth. How vivifying it proves to strial undertakings, and how readily it im- to commercial investments and enterprises a ity which cannot be shaken by death itself. the duty of all who are theoretically inter- or practically concerned in the solution of l and politico-economical questions, to awake asten in the minds of the people an apprecia- of Life Insurance, and a disposition to profit s advantages. In all well-regulated commu- ties it is regarded as obligatory on a citizen ucate his children, provide for his family, nsure his buildings against fire. We expect ay will come when a man will be considered ict in duty if he neglects to insure his life. is way the money is saved, the same way as were deposited in the savings bank; and be- the benefit it confers on the family of the idual insured, it increases the accumulated roductive capital of the country. Most of savings would be lost to the family and the c but for the motive held out by Life Insur-

e should take a broad view of the benificence fe Insurance. It is more noble than public ties, because it places those who receive its its above the need of public charity. Fami- re the foundation of a well-ordered society, he welfare of families is the welfare of the . The efforts of the thoughtful, the unself- d the diligent, who devote their savings to nstitution, in the confidence and well-found- lief that their families, after their decease, eap the fullest benefit of their providence ndustry, should not go unrewarded; and it is sed that such citizens as are not in the en- ent of affluence, but who are able to show hey have insured their lives for the benefit ir families, shall have a certain percentage ted from their taxes by the Government. is a wise and humane proposition, and no Government will give it due consideration it commences to legislate for the benefit of eople. It is just as sensible to tax asylums ospitals, as to seek to gain a revenue from posits which foresight and affection have set for the protection of thousands of helpless ns.

England, for more than a hundred years, Insuranee has been an established system. is country it is still in its infancy, the first ny having been established in 1825, but to the year 1845, comparatively few persons d themselves of its advantages, and more five-sixths of all the policies now outstand- ave been issued within the last five years. consequence is, the benefits of Life Insurance hardly begun to be seen in this country, but will be more fully realised when the present ation commence to pass away,and the vast t of money now in the treasuries of these nies flows out in a stream whose volume is nearly equal to that of the incoming pre- s. It is estimated that a million and a half ple, born and unborn, are already provided this country by those who have availed elves of the benefits of Life Assurance. one of the oldest companies of the land, the obligations have just begun to mature, were dispersed, during the past eight years, twenty-one millions of dollars, and at the t time the annual outflow is more than five ns of dollars.

e rapid growth of the system of Life Insur- n this country during the last few years is artially to the civil war, which swallowed up so many valuable lives, making death and the danger of leaving domestic interests unprotected a present reality in every household. While the cost of everything else is advanced, the price of Life Assurance remains the same, and people who insure now, while a depreciated paper currency is abundant, have the prospect of having their security returnable at some day in actual coin, after specie paymenes have been resumed. The amount which the Life Insurance Companies of this country have already promised to pay to the insured or their dependents, is nearly nine hundred millions of dollars. Of course the larger part of these obligations is contingent upon the continuance of the payment of an annual premium by the insured; but if the growth of this system receives no check, the pecuniary interests involved will exceed, within the lifetime of the present generation, those depending on the good faith and ability of the General Goverument to pay the national debt. And yet the growth of Life Insurance in this country, rapid as it is, is not false or unnatural. The conviction daily gains ground that it is the best plan which has yet been devised to provide against the uncertainty of human life; and therefore every enlightened man, in whom are wrapped up the lives and well-being of others, deems it his duty to provide for their protection and happiness.

In order to meet the various views and circumstances of persons desiring insurance, various kinds of policies are issued. One form of these is known as the whole life policy, which is payable after death to the legal representative of the person insured. Sometimes two or more persous get insured together, when the policy is called a joint-life policy, and is payable on the death of the persons named in the policy to the survivor. A survivorship policy is payable to a person named in the policy, in case he survives another person or persons named. Endowment policies are most commonly used to make a provision for children upon attaining a certain age, either with or without a return of the premiums paid, in case of death before the specified age is required. In endowment assurance policies it is agreed to pay the sum named to the insured himself in case he attains a specified age; otherwise to pay it to his heirs, as in the case of the ordinary life policy. Simple-term policies are for one, five or seven years, and are paid to the heirs, in case the holder dies within the term. This short-term policy does not seem to find much favor with those who insure, as they prefer to take out one for life.

In 1863, nineteen-twentieths of all policies were the whole life policies, with premiums payable annually during life. This form of policy provides most cheaply against the contingency of early death, and the annual premiums are smaller, having been distributed over all the probable years of life, but many people dislike the weary prospect of continual liability to pay an annual premium to the very end of life, especially when they reflect upon the possible inability at some future period in life to meet the payment. The best way to surmount these objections is to pay for the policy wholly in advance by a single premium. This plan ignores the main inducement to insure—the hazard of death during the earlier years of the policy. Thus paying in advance for all the *possible* years of his life, he pays largely for insurances which he may never need. But the circumstances of many prevent them from paying so large a sum at one time, and it will be conceded that the single premium plan is not the best one for the largest number of people. The modification of this plan, termed Deposit Life Insurance, has been offered to the public, but it has no material advantage over this ordinary single premium plan, and does not seem to find much favor with the public. A happy compromise between these two plans is that of a limited number of annual payments. The number of payments is usually limited to ten, and if, after two or three payments, the party insured fails to make any further payment, he is then entitled to a paid up policy for as many tenths of the original sum insured as there have been full premiums paid. This plan is popular, and has been eagerly adopted by the public. The objections to this plan are the same in kind, though not in degree, as those which lie against the single premium plan, each of the ten payments being somewhat larger, but as it brings the payments within the productive period of life, it relieves the contract from the indefinite obligation to pay long after the ability may have ceased, and therefore it finds favor with the public.

Premiums on whole-life policies may be limited to any number other than ten, as the one who gets insured shall choose, with or without the non-forfeiture clause. In endowment policies the number of premiums is necessarily limited to the number of years in the term covered by the policy; in other words, as it is plain to be seen, the payments must cease with the maturity of the endowment. The ten or five years plan of payments can be applied to these policies if desired, and with some companies the policies become non-forfeitable as fast as the premiums are paid. The adoption of these features has done much to popularize the system of Life Insurance. The fear of forfeiting the policy if the annual payments were not promptly made, and thus losing the whole, deterred many from insuring their lives; but now, since each payment *tells*, securing a part of the total amount, the people do not hesitate to take advantage of this admirable institution. The fair and liberal spirit which now prevades most Life Insurance Companies is all that could be desired, and redounds much to the credit and success of the system. Philantrophy can afford to be just, and justice, as well as honesty, is the best policy.

Life Insurance is most a blessiug to persons of small pecuniary means, and for them the ordinary annual premium is best adapted. To be sure, in order to secure the full benefit of his payments, it is necessary for the policy-holder to continue them; but if misfortunes overtake him, so that he is unable to make his annual payments, all he can fairly claim is, that he shall receive in insurance an equivalent for all the money he has paid. The plans of non-forfeiture adopted by Insurance Companies are concessions to the justice of this claim; and in some States, as Massachusetts, for example, the subject has become a matter of legislation, and the remedy is carried to the full extent of the evil; that is, it extends to all policies issued, of whatever kind; so that now whatever the form of policy taken out, the law secures to the holder, without the necessity of any action on his part, a fair equivalent for all the money he has paid. This end is accomplished by providing that, in case of a failure to pay his annual premium, his policy, instead of being absolutely forfeited (accordiug to the old plan), shall stand good for a length of time equivalent to the amount of money he has already paid upon it. But when that time (which is fixed by a set of tables) has expired, the insurance ceases, and the money paid is for ever lost.

The business of Life Insurance is of a peculiar nature, and there is great opportunity for fraud or fatal error, unless some system of public supervision is instituted, which shall ascertain the actual value of the policies issued by every company. In Life Insuranee, the profits come first and the expenditure afterward, which reverses all the laws of commercial enterprise and investments. This will be readily seen, when we state that in the first years of a Life Insurance Company its treasury overflows with the incoming premiums, while its liabilities are postponed for the lifetime of a generation. Under these circumstances, its condition must be probed by some decisive test. A considerable portion of the annual payments received from policyholders must be sacredly set apart, and allowed to accumulate at compound interest, as a fund to pay the future losses. One of the duties of this public supervision is to ascertain if enough has been so reserved and securely invested. The necessity of this acumulation is apparent to the most casual reflection.

About one-quarter of the policies now issued are on the ten annual payment plan. The effect of this large infusion of limited premium policies is to increase very preceptibly the ratio of the required reserve to the amount insured. It does not increase the hazards of the business, but adds to its resources and strength; but at the same time it enhances the moral hazards, and imposes upon the guardians of these funds the duty of more carefully husbanding their resources to meet the liabilities of the future. There should be a frequent comparison of the required reserve with the actual accumulation.

The term *valuation*, is applied to a policy, either to its value or worth to the Company, or to the insured. For finding the valuation of a policy, it is only necessary to compute the premium reserve, or ascertain the amount required to reinsure all the outstanding risks of the Company. There should always be funds enough on hand to reinsure with another sound Company all its outstanding risks.

Life Insurance proceeds upon the law of mortality and the rate of interest on money. With these two principal assumptions, it is not difficult to ascertain the exact average cost or premium for insuring a life at any given age. To meet the probable expensss of the business, there is added to this premium a margin varying from ten to forty per cent., making the gross or actual premium charged. But it must be assumed that this margin will be used up year by year in expenses, and no profit from this source can be safely anticipated, as present assets. Consequently, the valuation must be based on the net or mathematical premium without the margin. If it can once be fairly believed that there is no mystery surrounding the process technically called valuation, its importance will be more generally understood.

Next to the introduction of policies on the limited premium and non-forfeiture plans, the advance in the number and proportion of endowment assurance policies is worthy of notice. The effect of a large number of term insurance policies combined with endowment, upon the business and stability of companies, is unquestionably salutary. It diminishes the actual hazards so far as they depend on the correctness of the assumption of mortality, the one feature acting as a counterpoise to the other. To the insured this kind of policy changes somewhat the motive and effect of insurance. The whole-life policy provides only for those who survive the person insured while the endowment combined with insurance provides for the dependants of the insured and contingently for the insured himself. It also has something of the attractions of an investment. Endowment assurance is more like an investment than insurance of the whole life, because it provides contingently for a return to the insured himself. If a man were sure of living to the average age of mankind, or living out the full term of an endowment assurance policy, he would deposit his money with the savings bank; but as he is not and cannot be sure of this, he invests with the Insurance Company. In that view (of possibly *not* living out his expectations), the Life Insurance is the best possible investment; for it promises and performs what the savings bank is too slow to accomplish. It reverses the laws which govern investments. To get the benefit of the latter, the depositor must live, or his survivors must wait; but the sooner the holder of a Life Insurance policy dies, the larger the instant return, relatively to the money he has paid.

This is one of the beauties of Life Insurance, that while death shortens the period during which industry may provide for the weak, it does not cut short the provision which the policy secures, but makes the benefit larger as measured by its cost. The wise will ever regard Life Insurance as a security against the uncertainty of an individua life, and there is no safer plan of deposit than a well managed Insurance Company.—*N. S. Northern Monthly.*

MONTREAL MONEY MARKET.

(From our own Correspondent.)

MONTREAL, Sept. 15, 1868.

Our Money Market continues the same that it has done for some weeks back, and I have no new features to note. There has been a rather heavier demand at the Banks for accommodation, but this is not owing to any demand for money to remit West, but rather from the shortness of the usual remittances from the country. Good paper continues scarce, and is readily taken up at low rates; in the street the terms are 12 to 16 per cent. for ordinary paper, and 3 to 4 per cent. for really good. Gold has fluctuated very little since my last, the range being about 144. Silver remains steady at a slight decline on my last quotations. Mr. Weir, a money broker in this city, has issued a circular, according to which he agrees to buy up all American silver at 2½ per cent. discount, and export it on a guarantee of a certain sum to be paid him monthly as indemnification for any loss; said money, as I understand it, to be raised by the different towns in the two Provinces. He estimates by this plan he would be able to relieve the market of fully $1,000,000, and that gradually the price would rise to par. I only had a hasty glance over his circular, but will send you one when they are fairly before the public. The stock market has been inactive, the high price of first-class securities having checked operations. Dominion stock has attracted attention, and sold largely at 101.

BANK OF ENGLAND.

The following statement shows the condition of the bank for the week ending Wednesday, August 26, 1868:—

Issue Department.

Notes issued	£34,617,335
Government debt	£11,015,100
Other securities	3,984,900
Gold coin and bullion	19,617,335
Silver bullion	
	£34,617,335

Banking Department.

Proprietors' capital	£14,553,000
Rest	3,331,497
Public deposits (including Exchequer, Commissioners of National Debt, Savings' Banks, and Dividend Accounts)	2,979,410
Other deposits	19,838,830
Seven day and other Bills	502,953
	£41,205,680
Government securities (including Dead Weight Annuity)	£13,790,131
Other securities	15,597,078
Notes	10,661,705
Gold and silver coin	1,156,766
	£41,205,680

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Bank and Building Society stocks have been freely dealt in this week, and the market closed firm.

Bank Stock.—There are buyers of Montreal at 134 and sellers at 135. Ontario is offered at 99, with buyers at 98½. Considerable sales of Toronto at 116 to 116½. There were sales of Royal Canadian at 88 and 89, and is in demand at the latter rate. Buyers offer 103 for Commerce, sellers at 104. Merchant's sold at 105¼; sellers now demand 106. There are buyers of Molson's at 112; none in market. City is offered at 102½. Sellers ask 108 for Jacques Cartier, with buyers at 106. Union could be placed at 101¾; sellers ask 102. Other Banks nominal.

Debentures.—There were sales of Canada sterling five per cents. at 90¼ and 91, and of Sterling sixes at 100¼ and 101. Currency sixes are offered at 100. There were small sales of Toronto at rates to pay about 7 per cent. interest. County are in demand and very scarce.

Sundries.—Building Society stock higher. Canada Permanent sold at 119 and 119½; which rate are still offered. For Western Canada 111 to 11 is freely bid. Freehold sold at 105½ and 106, closing with purchasers at the latter rate. City G sold at 105 and 105½, and in demand. Britis America Assurance is held at 56, with buyers 5. Canada Landed Credit sold at 63 and is demand at that rate. Very few Mortgages offerin Money is easy on good short date paper.

PROVINCIAL NOTES.—The following is a state ment of the Provincial Notes in circulation on t 2nd of September, and of the Specie held agai them at Montreal, Toronto and Halifax, acco ing to the returns of the Commissioners un the Provincial Note Act:

Provincial Notes in Circulation, payable at Montreal	$2,899,
Payable at Toronto	1,211,
Payable at Halifax	94,
Specie held at Montreal	450,
" " Toronto	400,
" " Halifax	18,
Debentures held by Receiver-General under the Tender Act	3,000,

STATEMENT of the Revenue and Expenditur the Dominion of Canada, for the month en 31st August, 1868:—

REVENUE:—Customs	$891,157
Excise	144,174
Post Office	52,337
Bill Stamps	4,210
Public Works including Railways	100,063
Miscellaneous	185,983
Total	$1,377,933
EXPENDITURE	$964,29

Railway News.

GREAT WESTERN RAILWAY.—Traffic for ending 28th August, 1868.

Passengers	$36,206 66
Freight and live stock	38,009 01
Mails and sundries	2,212 50
	$76,428 17
Corresponding Week of '67.	77,539 6
Decrease	$1,111 4

RAILWAY TRAFFIC.—In the railway traf turns for August, the Great Western Railw turns were $260,017 against $270,183 in A last year; Grand Trunk, $627,713 a $600,799 last year; the Northern Railway a decrease of $10,000 as compared with last Brockville and Ottawa, $14,115 against $1 and the St. Lawrence and Ottawa, $9,349 a $9,518.

DEPOSITS.—The New York Life Insurance pany's deposit consists of $75,000 in U. S bonds. The Atlantic Mutual of Albany, has made a deposit of $50,000 in U. S. bonds.

TELEGRAPH EXTENSION.—The Montreal graph Company have this week opened offi Frenchman's Bay and Odessa, which ar ready for business.

THURSDAY, SEPTEMBER 17, 1868.

DUTIES AND RESPONSIBILITIES OF DIRECTORS OF COMPANIES.

The want of discrimination sometimes shewn in selecting directors of companies, and the readiness with which persons accept office, wholly indifferent to the duties and responsibilities thus incurred, is surprising. The gentlemen appointed are too often nominated for their respectability alone, are frequently among the smallest shareholders of the concern, live possibly hundreds of miles away from headquarters, and unwilling, even if capable, of exercising any discriminating control over the management of the common property. The embarrassments or total ruin to which so many companies are brought through the carelessness or criminality of the officers in whose hands the entire management is allowed passively to remain is properly chargeable to the men who are or ought to be the shareholders' trustees, the directors. Although directors are so often culpable, still all the blame does not properly rest on their shoulders, it primarily and chiefly rests on those of the shareholders themselves, who seldom attend general meetings and vote ignorantly for whatever name is proposed for the direction. Can it be wondered at, then, that the supervision of such boards should be little more than nominal, that the directors should practically consider the purposes for which they are appointed that of attracting business by their individual position, and that their duties are limited to attending board meetings when called upon, and discussing there such subjects as the manager or secretary may choose to bring before them.

We desire, as shortly as possible, to describe the responsibility which directors incur. Towards the public, the board of direction represents—is, indeed, the company; all contracts are entered into by their authority, and they can render the company liable on contracts to enormous amounts. But considering the magnitude of the interests and number of the persons for whom they are trustees, and to prevent reckless dealing with money not their own, the joint stock acts declare them jointly and severally liable for all debts of the company in case they declare a dividend when the company is insolvent, or the payment of which would render the company insolvent, or have the effect of reducing its capital stock, and also that they shall be jointly and severally liable for the amount of any loan made by them of the company's funds to any shareholder.

As regards the shareholders, even without any special agreement, the mere acceptance of office implies an undertaking on the part of directors with them to use their best exertions fairly and honestly to advance the interests of the company, not to acquire any interest adverse to such duty, and not to make any profit from their office.

It has sometimes occurred when actions have been prosecuted against directors for false or misleading statements contained in reports, or other official documents, that they were entirely ignorant of the incorrectness of such statements; sometimes through passive inattention, in other cases through the falsifications of the company's servants this has proved to be the case. But the language of the Judges is, in all cases, that it is the bounden duty of directors to know the real state of the company, and it is also their duty to take care that the books are kept in such a way that this state can be readily and correctly ascertained by others. It is the duty of courts of justice to prevent men from gaining advantages by representations of that which is false or suppression of truth. In many cases a true statement of the affairs of companies, if as honestly published as the law requires, would bring the concern into public disrepute, while there is every probability that if confidence be retained for a few months, all difficulties will be overcome. If directors choose to make false statements for this purpose, they themselves run the risk. They are not at liberty to do evil that good may come, even for a corporation without a soul to be saved.

The directors are also responsible for another reason. Shareholders, however induced to become members of the company, are liable, according to the terms of the corporate agreement, for the debts of the company. If through the false statements of outsiders, they have been induced to make the bad investment, their only resource is, to pay the amount of their liability and then bring an action against the persons who have caused the loss. A company is in no way responsible for damage caused by unautho-

rised statements. It is a different matter when the fraudulent representations are made by the directors or by the documents issued by or under the sanction of the general body of the shareholders. In such case, the parties becoming shareholders have no valid ground as against creditors for resisting the liability attached to ownership of shares. Parties having taken shares cannot repudiate them as against creditors. But they may successfully resist contribution to the company's debts by shewing that they have been misled by statements made by the authority and issued under the sanction of the company.

INSURANCE COMPANIES' RESERVES.

A good story is told of a prominent lawyer who attended a meeting of the shareholders of a local Insurance Company, at which the propriety of having a reinsurance fund was suggested, and succeeded in defeating a proposition to establish such a fund by asserting, with all the effrontery of ignorance, that the idea of such a thing was wholly without precedent. Of course insurance business was not very well understood here at the time, or the intense absurdity of the assertion would have brought down on the facile advocate an avalanche of ridicule. But it seems that ignorance on the subject still holds sway, and we ask the pardon of the better informed in now venturing to refer to some of the elementary principles which the veriest tyro in insurance should have at his finger-ends. In a prior issue, we gave the substance of an article that appeared in the Chicago *Spectator*, an excellent insurance journal, reviewing the Fire Insurance business of the State of New York. It appeared from the statistics there collected, that the Directors of many companies have borrowed from the funds which legitimately belonged to the reserved surplus, to pay dividends. We are prepared to go a little farther than our contemporary, and adduce instances in which a company has gone on paying dividends without having a reserved surplus at all. The earnings that should have gone to form a reserve were divided amongst the delighted shareholders, and luck being in the ascendant, the whole affair was considered very jolly. Of course a day of reckoning came, when fourteen per cent. dividends were exchanged for five and ten per cent. calls, and stock at a premium wilted into an unsaleable liability So long as the amount of premiums received exceeded the amount of losses, affairs were considered satisfactory, but a time arrived when losses increased in magnitude, and there being no adequate provision for such an emergency, the result was as we have stated.

The insurance laws of Massachusetts are explicit in prescribing a basis of dividends. One section reads as follows :—

"At each annual meeting, the directors shall cause to be furnished to the stockholders a statement of the condition of the company, and in making dividends, shall not consider any part of the premium moneys divisible until the risks for which the same was paid have absolutely been terminated. But in making up their annual statement, they shall be required to charge the company only such portions of the cash or notes received on policies which are unexpired, as would be requisite to reinsure all outstanding risks."

The first point for consideration is the restraint upon the division of premiums until the risk for which such premiums were paid have been absolutely terminated. In other words, the premiums must be first earned before they can be divided. The next point is, the company must be charged such portion of the premiums on unexpired policies as would be required to reinsure all outstanding risks. That is, the amount requisite to reinsure outstanding risks is to be considered just as much a liability as the unpaid losses. We desire to make these two positions clearly understood, for we are prepared to give instances where, in the management of some of our local Fire Insurance Companies, they have been overlooked. Suppose a company insures a certain number of individuals for one year against loss or damage by fire ; that in the middle of the year an account is taken of the gross premiums received ; and that the amount is divided by way of dividend among the stockholders in that company. How do matters stand? The half year yet to run may be fruitful in losses, and if the premiums have been paid away, where is the money to come from to meet the company's engagements. It must come out of other premiums or out of the reserve. In either event, it is manifest that the shareholders have received what they were not entitled to. If the reserve is not adequate, a great injustice is done to the policy holders. Why do banks go on accumulating heavy reserves? as a matter of precaution, against a possible time of disaster. With Insurance Companies, a reserve is a strict matter of justice to those whom it undertakes to insure.

The journal to which we have already referred, puts the matter in a clear light. "What the insured pays when he purchases a policy of insurance is recovery from loss, and his policy to be worth anything must carry with it the assured and absolute certainty of indemnity in case of damage." When we consider that "164 principal American Insurance Companies doing a fire and fire-marine business, paid out during the years 1865, 1866 and 1867, twelve and a half millions of dollars more than their current premium receipts," we can appreciate the necessity of a reserve.

But a reserve is technically distinct from a reinsurance fund. Mr. Superintendent Barnes in his last report says : "except in cases of companies holding a very large line of premium, a reserve is needed also in addition to an ordinary capital and reinsurance fund." A reinsurance fund is a liability while a reserve is rather a wise provision against uncertainties. In the Annual Statements of New York Joint Stock Fire Insurance Companies, an abstract of which Mr. Barnes published with his report, we find in the list of liabilities, immediately following the amount of losses, this item, "Amount required to reinsure all outstanding fire risks at an average of 50 per cent. of unexpired premiums." If this requirement is of much importance in the United States, sure it is of equal importance here. In fact, the true state of a company cannot be ascertained without information as to the amount necessary to reinsure its outstanding risks, and no statement is correct that does not include among the liabilities of a company such an item. One might as well accept as a proper balance sheet a statement of the assets without any reference at all to liabilities.

In Barnes' Report for 1865, we find the following :—

"The repeated efforts of the Superintendent for several years to compel an adequate fire reserve for reinsurance and contingency have been partially effective, but the repeal at the session of 1865, of the Act of 1853 requiring a reserve of the full amount of premiums received on unexpired risks, has resulted disastrously both to the company and the public, by its tendency to reduce premiums below the standard of safety, and also by diverting funds to the payment of dividends which in several cases at least were needed for the payment of losses. It is, however, quite probable that the only practical method of teaching these truths was by the crucial test of actual experience, which has now been severely applied to so many companies."

On the subject of a reinsurance on Marine business, it is remarked :

"The question of what amount should be charged as a liability to a Marine Company as a reinsurance fund for outstanding risks is very important in stating the condition of such a company. In accordance with the recommendation of the Board of Underwriters, and the opinions of the soundest and most experienced marine underwriters, a reinsurance reserve has been fixed at 100 per cent. of the full amount of premiums received on unexpired risks or policies not marked off as terminated. All the Marine Companies are now charged with this amount, and also the Fire Companies engaged in Marine Insurance, on their marine and inland risks."

As we are now writing more particularly for those who do not make insurance matters the subject of special attention, we may

bly make ourselves better understood by an xample, and with that object we give the tatement of the American Branch of the orth British and Mercantile Insurance Com-any, as it appears in Mr. Barnes' Report :

pital Stock of the Company, $1,216,666.66

I. ASSETS.

Stocks and Bonds owned by the Company :—

	Par value.	Market value.	
S. 5-20 bonds.....	$200,000	$216,750	$216,750 00
mount of cash on hand in the Company's office, and cash deposited with Dabney, Morgan & Co.....	$108,481 18		
sh in the hands of Agents received for premiums during the year..	334 22		
Total amount of cash items.....			108 815 40
Aggregate amount of all actual available Assets.....			$325,565 40

II. LIABILITIES.

sses adjusted, but not due ..	$20,208 33	
sses unadjusted.....	9,750 00	
Total amount of losses unpaid.....		$29,953 33
mount required to re-insure all outstanding fire risks at an average of fifty per cent. of unexpired premiums (estimated by the Company at 40 per cent., $58,536.78		73,170 98
mount of all other claims against the Company, consisting of U. S. taxes on premiums not due.....		1,176 96
Aggregate amount of Liabilities.....		$104,306 27

III. INCOME.

et cash premiums received on fire risks ..	$162,475 26
terest and dividends received from all sources.....	871,42
Aggregate Income received during the year in cash.....	$163,346 68

IV. EXPENDITURES.

et amount paid for fire losses during the year.....	$21,569 74
aid for commissions on premiums	23,930 70
mount paid for salaries, fees, and all other charges of officers, directors, agents, clerks and other employés	6,451 39
mount paid for national, state and local taxes, stamps, &c.	6,823 70
mount of all other payments, consisting of the following items :—rent, exchange, postage, printing, stationery, &c.....	5,200 89
Aggregate Expenditures during the year in cash	$63,976 42

V. MISCELLANEOUS.

Net amount of fire risks written during the year.....		$14,405,022 00
Amount of fire risks in force Dec. 31, 1867, having less than 1 year to run	$11,031,142	
Having more than one and not over three years	211,800	
Having more than 3 years to run	60,800	
Total amount of risks in force Dec. 31, 1867.....		$11,303,742 00
Amount deposited in different states and countries for the security of policy-holders.....		200,000 00
Business in the State of New York during the year :		
Amount of fire risks written		$8,726,699 00
Do. fire premiums received		76,334, 33
Do. fire losses incurred		17,079 99
Do. taxes paid to various fire departments in the state of New York during the year		707 27

The above is a simple and intelligible outline of affairs. If we compare it with the statements of some of our local companies as an intelligible document, the difference between them will tell greatly against us.

A few weeks ago we gave the Annual Statement of the Provincial, and, certainly, a more extraordinary jumble could not be concocted, if the sole object were to confuse. The Statement of the Western was far more intelligible, and much more full in detail. While congratulating the latter company on its success in business, we considered that the declaration of a dividend was unwise under the circumstances, and we know that some of its most clear-headed shareholders coincided in our opinion. It is a great mistake to suppose that the mere declaration of a dividend is necessary to strengthen public confidence in a company. The fact of increasing the reserve and providing a reinsurance fund is much more likely to command business. It is idle to say that the capital, liable to be called in, answers the purpose of a reserve or reinsurance fund, for no one can tell how much of it is or ever will be available. The difficulty of getting it in through small calls is evidence enough to establish this point. At any rate we have the experience of other countries to guide us in the matter, and to affect a contempt for that experience indicates sheer stupidity.

A HOWLING COMPANY AND A BLOODY PERORATION.

The *Monitor* is greatly mistaken if it supposed that our Insurance Act of last session, by which insurance companies doing business in Canada are required to make a deposit for the protection of Canadian policy holders, is a "Kanuck trick," or that "the law will be repealed as soon as all the Dominion stock is taken that can be forced off through that channel." The Berkshire is making quite too much fuss about its withdrawal.

About thirty American and British Companies have complied with the law without any childish howling, and we doubt not that they find their business profitable. If they did not do so, we take it for granted that they would join the Berkshire in an exodus. The Act may not be perfect ; no one says it is ; but at the same time it is not such a dreadful thing as some affect to regard it. Those who wait for its repeal will have to possess themselves in patience for a considerable length of time. We are uncertain whether our contemporary is not "poking fun" at the Berkshire. Hark !

"The Berkshire alludes to the laws of Massachusetts under which it is organized, its deposits, the character of its investments, and says, 'These facts should remove any doubt of the safety of the Company or of its ability at all times to pay its claims,' just as if any one had any right to entertain such a doubt ; just as if every one did not know that a policy in the Berkshire was a thousand times as secure, a thousand times as desirable, from every point of view, as any that could be issued by a company doing business in Canada that has not complied with the laws of New York or Massachusetts."

If this is not satire, it certainly is a puff that savors of Brobdignag. Being charitably disposed towards our iron-clad contemporary, we adopt the former view and extend our sincere sympathy to the Berkshire. The peroration of the paragraph we have under consideration is good :

"Our Yankee blood rebels against unnecessary condescension or seeming apology to our cousins across the lake who are trying to cheat us and mean, bye and bye, to laugh at us for falling into their trap."

We hope that the recent hot weather did not provoke this rebellion of "Yankee blood." If it did, Dr. Sangrado's services are required in and about New York.

INSURANCE COMMISSIONERS.

The opinion seems to be gaining ground in England that State supervision is productive of benefit in insurance business. It has proved so in the United States, and testimony is borne by no partial authority to the many advantages apparently incidental to its adoption. We have at various times touched on the subject, and, though we have not a very great number of Insurance Companies doing business in our country, still we cannot close our eyes to the fact that some check should be placed on the operations of those to whom are entrusted interests so important as those involved in Fire, Life and Marine Insurance. There are those to whom novelty is much the same as crime. But, in addition to a share of the haters of new things, we are blessed with a goodly company of fellow citizens whose likes and dislikes are balanced with the most accurate nicety on patriotic prejudices. We hear with equanimity of "unreliable Yankee companies," of "old-fogy English companies," and of "unsound Canadian companies," for we make allowances for exuberance of imagination and excess of patriotic ardour, and we know that some insurance agents are not over-particular in their expressions when they scent business. The epithets are bandied almost with a recklessness worthy of a better cause, and their adroit use may be considered tricks of the trade.

We have heard objection made to the appointment of Insurance Commissioners, on the ground that the practice is *un*-English. Of course the objector was one of a class who consider anything that is unknown or not practiced in England as not worth knowing or doing. Perhaps the day is not far distant when they will have in England government officers to discharge duties similar to those performed in some of the United States by Insurance Commissioners or Superintendents. When that day arrives, perhaps we shall venture to step out of the beaten track and accept the appointment as a signal for us to think about following the example.

English Newspapers exchanging with this Journal will oblige by directing all papers *viâ* Canadian steamer.

A correspondent enters fully into the practical question as to the profitable export of Canadian Petroleum. His letter contains interesting facts, which go to show that we might share in the extensive trade done with Europeans by the Americans in this article, had we only the necessary enterprise. We cannot do more than refer to the matter this week, reserving our observations on the subject to a future issue.

The Equitable Life Insurance Society of New York is expected to make a deposit next week.

Communications.

THE EXPORTATION OF CANADIAN PETROLEUM.

To the Editor of the Monetary Times.

Sir,—Some short time ago a letter appeared in your valuable journal under the head of "Wasted Investments," which referred to the deplorably dull state of the Canadian oil trade; many valuable facts were brought out in that letter, but as the oil business in Canada is, or ought to be, one of the most important branches of industry in the Dominion, I may be excused for bringing forward the subject again.

It has been a matter of surprise to many that Petroleum, which is intrinsically one of the most valuable articles bestowed upon us by Providence, should for nearly the last two years have been almost valueless to the producer in Canada; for when crude oil is sold for 25 cents a barrel, or little more than half a cent a gallon, it is almost equivalent to giving it away, and at this price numbers of barrels have been sold in Enniskillen since 1866. The crude being in this state it is not to be wondered at that refined oil has been, until recently, sold at ridiculously low prices; for instance large quantities of excellent refined oil were sold by the car load at ten cents a gallon (barrels *included*); and notwithstanding the trouble of handling and storing, was sold retail as low as 17 cents a gallon. I well remember when, about eight years ago, refined oil was first introduced here the price was $1.25 per gallon retail, which was readily given, and it was considered then by far the cheapest light to be had. On reflection it will be seen how marvelously cheap refined oil is at 10 cents a gallon, or $4 per barrel; the barrel itself is worth $2, which leaves only $2 for the 40 gallons of oil, or 5 cents per gallon wholesale for what we used to consider cheap at $1.25 per gallon retail, or 25 times the price which it pays the refiner to sell it at now. The prices mentioned so far, are as they were before the recent duty upon refined petroleum was imposed, but that makes no difference as to the matter under consideration, for the duty of 5 cents a gallon recently imposed is merely an excise duty for home consumption, and does not affect the question of export. Nor does the increased price of oil in Canada for the last few weeks make any difference, for that is only the consequence of Judge Higgins having bought up most of the oil and virtually controlling the market for the present. In a few months Mr. Higgins' reign will be over, and prices will again recede as low as they have previously been, unless some effort is made to place the Oil Trade of Canada upon a firm and permanent basis. This cannot be done unless an export trade is established for our oil; nothing but exportation will really relieve the market, and the reason is obvious. We are now in the somewhat peculiar position of having an article of real and acknowleged intrinsic value, almost a drug upon our hands. At present only the Canadian market is open for the sale of Canadian oil, and probably one or two of the large wells in Enniskillen could, if regularly worked, supply sufficient oil for the whole of Canada. What, then, are the other wells to do? Are dozens of wells to remain idle because one or two can supply the Canadian demand? In most cases the necessities of the owners drive them to work their wells and sell the oil at any price, and hence the reason that the price has been as low as 25 cents, and I believe even 15 cents a barrel. The great complaint of oil men has been that there is too much oil. Can there be too much of a valuable article? The oil men will answer in the affirmative, and tell you that when a large well is struck it is one of the greatest misfortunes for the oil interest generally. Now is not all this contrary to reason? Has there not been something radically wrong in the way of canvassing this matter? We have not far to go for the true answer and the real explanation of these questions. If we look across the border and see what has been done in the United States in this same oil busines, we shall find an example worthy to be followed. In 1865 the oil business of the United States was in nearly as low a state as the Canadian oil trade is now; great quantities of oil being produced, the price went rapidly down, the bubble Companies that had been started on bogus principles collapsed, no export trade of any consequence had been established and general stagnation was the result. Did matters long remain thus in the American oil regions? Did the oil men all agree that too much oil was being produced, and endeavour to make combinations (as our people have done) to keep the price up to a certain figure? No, our neighbours have a different way of getting over a difficulty; they looked the evil full in the face and set to work to apply the remedy. They saw that such an exceedingly valuable product as petroleum was never destined to remain hidden in the ground, for the reason that there was too much of it, but that if there was too great an abundance for home consumption the surplus was given them to export to other countries, that the rest of the civilized world might share in the valuable article so profusely bestowed upon them, and they accordingly went to work in real earnest to find the most suitable markets in which to dispose of their oil. And with most triumphant success have their efforts been crowned; the extent of the import trade of Petroleum from the United States is something marvellous, when we take into consideration the exceedingly short space of time it has taken to establish that trade, and it still appears to be increasing at a wonderfully rapid rate.

To illustrate this, let us look at a few facts as taken from the "New York Shipping and Commercial List;" the Petroleum exported from the United States to foreign ports from January 1st, 1868, to September 8th, 1867, amounts to 67,-167,432 gallons, against 41,590,031 gallons for the same time in 1867. The amount exported for the same time in 1865, was only 12,536,-485 gallons; so that the export of 1868 is more than fifty per cent. in advance of 1867, and more than five times that of 1865. What other trade has increased in anything like this proportion? The great increase has taken place in the continent of Europe, although a considerable amount has been shipped to Central and South America, the West Indies, and Australia, and some to India and Japan. Havre takes five times as much this year as in 1867; Marseilles more than twice as much; Antwerp six times as much; Bremen, Hamburg, Cronstadt, Konisberg and Stettin, more than double. Alexandria in Egypt takes more than three times the amount of last year; many ports in Spain and Portugal, and Genoa and Leghorn, more than five times; Naple and Palermo, nearly a million gallons this yea against 62,000 last year; Trieste, 900,000 agair 37,600; Constantinople 308,000 against 24,50 last year, while the trade with Brazil and Mexic has increased more than double, and with Chil and Peru more than threefold; and this ye considerable shipments have been made to variou ports for the first time.

What a contrast is this to the Canadian O Trade; there is no complaining in the Siates of superabundance of oil; no grumbling at Prov dence for giving them too much of a good thin Canadian oil dealers can surely take a lesson fro this. What is to prevent refined oil being exporte in the same way that it is from the States? Th Canadian Oil Region has every advantage in th respect. Petrolia, the great producing regio capable probably of producing more oil than an other region of its size in the world, is situate upo the Great Western Railway, and is within abo 20 miles by Railway from Sarnia, from whenc if desired, the oil can be shipped to any part the world, or it could be sent by rail to Hamilt and shipped from thence. As we have previous stated, refined oil has been sold as $4 per bar wholesale, and it may be concluded that the refin made a profit of not less than 50 cents per barre this then shows that the refiner, if he had wells his own, could always produce refined oil at a co of not more than $3.50 per barrel, including t barrel; for if he had good wells he could produ the crude oil as cheaply as it has ever been sold, s for 25 cents per barrel. The following is a co putation made by a practical refiner from acti experience of the cost of shipping oil to Liverpoo

Cost of barrel of refined oil at Petrolia, inclusive of barrel (provided refiner has his own wells)	$3
Freight per G. W. R. to Hamilton.	0
Freight by vessel from Hamilton to Quebec	0
Expenses of coopering barrels, &c., at Quebec	0
Ocean freight from Quebec to Liverpool	1
Insurance, 20 cents; Expenses at Liverpool, 30 cents	0
Commission	0
	$7

Thus making a total cost of $7.00 per bar when delivered in Liverpool ready for sale; present price at which refined petroleum is quo in Liverpool is 1s 6d sterling per imperial gall one of our barrels of refined oil contains 33 imp ial gallons, and the market value of the ba would therefore be £2 9s 6d stg., or a little bet than $12; from this deduct the cost of the ba of oil laid down in Liverpool, $7.00, and a c profit of $5.00 per barrel remains, which su shows a larger margin of profit than the expo tion of any other Canadian article, and far la profit than any ordinary business will yield. refinery capable of turning out 100 barrel refined oil daily, would make according to above calculation, a clear profit of $500 per by exporting the oil, which would probably several hundred per cent. per annum upon capital invested in wells, refinery, and every lay. Upon a large scale it is believed that cost of barrels and freights could be consider reduced; a large establishment making its barrels would save at least 25 cents upon manufacture of each barrel. In the above mate the oil is transhipped at Hamilton and bec; but there is no reason, if the exporter vessels of his own, why the oil should no shipped direct from Sarnia to Liverpool, and have only 20 miles of land carriage altogether. may be said that the present price of refined o Liverpool, (1s 6d per gallon), is higher than price at which it is likely to continue; but posing it to be so, a very handsome, profit w still be made if the price were two pence per lon less than it is now. If our people were to commence the exportation of refined oil, find out from actual experience how profital

there is every reason to suppose that the e would increase as rapidly as in the United es. In the American oil districts, good oil ducing lands are more valuable and bring ier prices to-day for actual development than he days of the greatest oil excitement, and I e heard of prices as high as $3,000 an acre ing been lately paid for oil land in some parts ennsylvania. A large Canadian export trade ld have a most wonderful effect upon the value nds in our oil districts ; it would make them th more for their actual intrinsic value than wildest speculator would formerly have asked hem when everything was prosperous in Oil-. The price of crude oil at the wells in Penn- ania is from $5.00 to $6.00 per barrel, Amer- currency ; this is equal to from $3.50 to $4.20 barrel in gold, and let the price in the Canadian region only get up to that figure and stay there nanently, as it would do if a large export e were established, and the amount of business would be done would be perfectly marvel-. The present price of refined oil in New k is 32 cents, American currency, per gallon, usive of barrels, which is equivalent to $8.83 old per barrel, and at this price immense quan- es are bought for exportation.

here was formerly much prejudice against Can- n oil on account of its smell. This prejudice e partly from badly refined oil being shipped n Canada, but principally in consequence of Americans shipping quantities of inferior erican oil, which they passed off as Canadian, hence Canadian oil for a time obtained a very name. The truth is, however, that the Can- n Petroleum is capable of being quite as thor- hly deodorized, as American, and has been nd to possess greater illuminating power than erican Oil. After due investigation, I main- boldly and without fear of contradiction, that adian oil can be rendered completely odorless, when samples of refined American and Cana- n oil are placed side by side, they are so nearly e that it is impossible to make any distinction ween them.

The uses of petroleum for illuminating purposes y have been referred to, and space does not per- me now to enter upon the question of petroleum uel ; but it is the opinion of many scientific n that for steam vessels, liquid fuel is destined e the fuel of the futurc.

Yours, &c., PETROLEUM.

Toronto, Sept. 14, 1868.

MADOC GOLD DISTRICT.

(From our own Correspondent).

BELLEVILLE, Sept. 14, 1868.

The depression which has so seriously impeded advancement of the mining interests of this trict is beginning to give way before the influ- e of sounder and better conducted enterprise. e reign of charlatanism and deception is over the present, and the development of the mine- riches which really exist is being attempted ler the direction of science and common sense. e Dousterswivel tribe, who persuaded every man t he had a rich gold or silver mine in his well cellar, and who pretended to extract buttons of ver and globules of gold from the stones by the y side, have been routed out of the district ; l the practical men, who reduced every lead of ritiferous limestone to the California or Nevada ndard, and misled by similarity of appearance, l or fancied, uniformly mistook titanic, specu- and arsenical iron, mareasite, molybdenite, and n plumbago, for ores of silver, are beginning to d out their mistake, and to look for those lodes ich promise to be permanently remunerative, ., veins or deposits of true vitreous quartz, con- ning gold in visible particles, and of sufficient tent to warrant the erection of the expensive chinery requisite for its extraction. Under this re wholesome *regime*, several promising discov- es have already been made; some of which I have indicated in former letters, but which I shall now recapitulate.

Lot 16, in the eleventh concession of the township of Marmora. This is known as the Feigel mine. The material is a vitreous quartz, crystalized on the surface, and enclosing micaceous peroxide of iron within the crystals and in the interstices or seams of the massive part. This lode has assayed from $73 to $154 per ton.

On an adjacent lot is the quartz vein discovered some months ago by Mr. D. N. Powell. This vein has also turned out some very rich specimens; but I do not know its extent, or how much it will assay.

Numbers 6, 7 and 8, in the ninth concession of the same township, have also yielded some good shows of gold in vitreous quartz, which appears to be as rich as the Feigel mine.

Numbers 6, 7 and 8, in the eighth concession, also contain veins from which gold-bearing quartz has been taken ; and I saw but last week, in the Hon. R. Read's office, a slab of quartz over a foot square by three inches thick, on both sides of which gold was plainly visible in several places ; this was from No. 10, in the eighth concession.

On lot 6, in the third concession of Elzevir, Messrs. Coe & McPherson have found a vein of quartz from which they have got out several rich specimens. On lot 9, in the same concession, known as the Langley lot, a vein of auriferous quartz also exists, a specimen of which is now before me. This quartz appears very impure, presenting a dull, greasy-looking fracture, and being interseeted with blackish stripes. It is encased above and below with dark mica schist, encrusted with iron oxide, and shows gold in several places. A striking peculiarity of this quartz is, that it possesses a rhomboidal fracture, almost amounting to a distinct cleavage.

Another very rich specimen was brought in for assay last week from the vicinity of Bamockburn, in the township of Madoc ; but as I expect to visit the locality in which it occurs to-morrow, I shall reserve any further details until my next.

Existing mines and mills are much in the same position as at the date of my last letter. The Severn mill, in the eleventh concession of Marmora, the boiler of which exploded soon after it commenced running, has been repaired, and has been working for three or four days. It is said to work in a very satisfactory manner.

The Anglo-Saxon mill has been running about a month, with a few intermissions ; but they have not cleaned up yet, and will not do so until 500 tons have been put through.

The Merchants' Union Company are making slow progress in setting up their machinery. It will be recollected that this Company bought Daniels & Co.'s mill, to which I believe they intend to make some additions.

The Hepburn pans, for the Barry mine, in Elzevir, are being got up at Messrs. G. & I. Brown's factory, but it will be some weeks before they will be in working order.

The Richardson Company are doing nothing in the way of working either mine or mill. I hear that they have found another vein of rock, which yields $10 per ton. The sale is to take place on Tuesday, (to-morrow), after which operations will probably be resumed.

The Bay State mine and mill are still shut up.

I have heard nothing of the doings of the Victoria, the Toronto and Whitby, or the Madoc and Toronto Companies ; but as I shall be in the vicinity of their mines to-morrow, I shall be likely to get some information respecting them.

QUEBEC AND GOSFORD RAILWAY.—At a recent meeting of the Council of the Quebec Board of Trade, the following resolution was passed unanimously :—"That in the opinion of this Council a Wooden Railway from Quebec to Gosford would be an enterprise likely to be of great benefit to the city of Quebec, in providing cheap firewood, as well as employment for a large number of laboring men and good lands for settlement."

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, 15th Sept., 1868.

The weather during the week has been very variable. For the present, this part of the country has had rain enough, and warmth is wanted to bring forward the aftergrass. Fodder is likely to be exceedingly scarce in the districts around Montreal, the oat, pea, and barley straw being very short, and in many parts not worth cutting, consequently farmers are extremely anxious to sell stock, and the Americans have agents buying up in all directions. One drover told me that he had already purchased 620 horned cattle, paying on an average $10 per head, a most losing price for the farmer, yet better than attempting to hold over, as we well know the expense of wintering cattle in Lower Canada when fodder has to be bought.

OUR PRODUCE MARKET continues quiet, prices not yet having reached the bottom. There is no doubt that our market has been damaged by the unnaturally high prices which ruled at an earlier period of the season, and that drove a large proportion of our trade elsewhere ; but we trust that when prices recede to their natural level to get it back again. There would be a good export demand for flour and wheat, were prices here sufficiently low to justify our merchants in operating. From present indications they will soon reach that limit, as speculators in the great grain centres in the west, can hardly keep up present rates in the face of the large supplies that will soon be poured in upon them ; and as English gold will be needed to move the grain, the English markets will necessarily determine prices.

	1867.	1868.	Iner's.
	brls.	brls.	brls.
Receipts of flour 1st January to 9th Sept.....	412,777	430,459	17,682
Shipments of flour 1st Jan. to 9th Sept.....	305,837	289,735	7,291

For the coarse grains there seems a speculative movement in the country for barley, and long prices have been paid, but I scarcely think that farmers can calculate on the present extreme rates being maintained. The market for pease is in an interesting position, as little doubt can be entertained of the shortness of the crop, some rating it at only one-half, so that farmers are looking for exceptional prices, but whether they will obtain them or not is at present a question, though there cannot be any doubt but that rates will rule high.

IN GROCERIES, the chief activity is confined to teas and molasses ; considerable transactions having taken place in both articles, there have also been fair sales of U. C. Highwines at $1.45. Other staples are quiet. Our first arrivals of the fall fleet are now daily expected, and that will give an impetus to our market.

HARDWARE keeps dull ; but several buyers being down to attend the Exhibition, more activity may be expected towards the close of the week.

DRY GOODS still continue in brisk demand, especially cottons and prints, and a much larger quantity has been moved off than anticipated at the commencement of the season. Woollens continue dull owing to the heavy stocks in the country.

There have been a large number of strangers in town to be present at the Exhibition and Rifle Match ; but so far they have been too much taken up with sight-seeing to pay much attention to business ; but towards the end of the week I expect they will devote their time to the more practical part of their visit.

Toronto Market.

As the fall advances trade grows steadily better, and in all the different departments an increased business is spoken of during the past week. Remittances from country merchants have been better, showing that the proceeds of the harvest is passing into their hands.

DRY GOODS.—An active trade which extended to all classes of goods is reported, there being no striking feature calling for particular notice. Prices have a firm tendency, but we are not aware of any quotable change.

GROCERIES.—As will be observed by reports elsewhere, sugar is quoted higher in the leading markets, the advance in New York being three-eighths of a cent per pound. This has given rise to a firm feeling here, and holders are stiff at quotations.

BOOTS AND SHOES.—Orders from country dealers continue to pour in faster than they can be filled. We are now in the height of the season which, however, is expected to continue brisk for a month or six weeks yet. Goods are held with rather more firmness, but manufacturers' prices remain the same.

LEATHER—More active at quotations. The demand runs chiefly on Spanish sole and French calf.

PETROLEUM.—The combination continue to hold entire control of the market. The export question is being revived, and seems now certain to take a tangible shape. A Company, having its headquarters on the other side of the Atlantic in London or Glasgow, and having a representative at Petrolia, is preparing to export a cargo, and there is little doubt of the success of the venture. Others are also preparing to take a similar step. Meantime the combination intend retaining control of the market, preparations being made for an extension of the present pact beyond the period named in the existing arrangement. There is a small local trade doing at our quotations.

PRODUCE.—*Wheat*—Receipts 1,650 bush. The market is dull and nominal. *Barley*—Receipts by rail 12,518 bush.; by teams 20,000 bush.—total, 32,518 bush., against 20,000 bush the previous week. We expect good receipts for some time to come now that the fall seeding is over. The market opened at 93c to 95c, and steadily advanced to $1 to $1.02 at the close, holders asking $1.03 to $1.04; sales of car lots at $101½ to $102, the tendency is upwards; there is a general feeling that barley will not go lower. *Peas.*—Receipts small; sale, 6,500 bushs. at 97c. f.o.b. at Hamilton; street prices here 95 to 96c. *Seeds.*—Timothy firm and in good demand at $2.50 to $2.75.

FLOUR.—Receipts 1,650 brls.; market dull and lower; sales of superfine occurred at $5.85 to $5.90, the market closing with free sellers at $5.75, and no buyers above $5.65. A lot of extra was placed at $5.85; 100 brls. fancy found a buyer at $6.25. *Meal*—Nominal.

PROVISIONS.—*Butter*—Dull; selected lots offering at 21c.; no sales. *Cheese*—Scarce and in demand, chiefly for the local trade, at 10c. to 11c.; makers want 11c. to 11½c. *Eggs*—Quiet at 11c. to 12c. *Pork*, nominal. *Dressed Hogs*—A few selling at $7 to $8 per cwt.

LIVE STOCK.—*Cattle*, a little lower, at $4 to $6, according to quality. *Sheep* $3 to $4 each. *Lambs* selling at $1.50 to $2.50 each. *Calves* $5 to $6 a head.

FREIGHTS.—A steady business is doing in lumber to Oswego at $1.50 to $1.75 greenbacks. A few lots of flour have gone to Montreal by steamer at 20c. Barley to Oswego pays 3½c. per bushel American currency.

MONEY.—Sterling 60 day bills, 9¼. Gold drafts on New York, par to ¼ premium. Silver bought and sold by the brokers at 4½ to 5½ discount.

Drawbacks on Sugar.

Our English exchanges inform us that a conference of the powers who are parties to what is known, as the Drawback Convention, (entered into for the purpose of regulating the sugar trade), was held at the Hague recently. The alterations made in the terms of the Convention are said to be unimportant, and simply consist in a somewhat greater approximation to a fair treatment of the English refiners. The official account will shortly be published.

The Fur Trade.

The London sales took place in the beginning of the month. The bidding was spirited, and in no case was there a decline in price. Mink, Musquash and Fisher advanced slightly. Beaver, Lynx, and Marten advanced 15 to 20 per cent. on previous sales. Inferior Beaver advanced 40 per cent., and Otter 20 per cent. Red Fox brought 15 per cent. more than at the March sales. The advances in the cases of Marten, Mink, and Beaver were discontinued here and will not affect the market. Before advices were received Beaver changed hands at $2 per lb. The impression is general that these high prices will not be sustained through the Fall and Winter.—*Montreal Herald.*

New York Grocery Market.

SUGARS.—Sept. 11.—Imports for the week were light. The market steadily improved; increasing both in firmness and activity closing at an advance of 3-8 on the opening prices of the week, with more firmness on the part of holders. The business has been confined to refining grades.

TEAS.—The imports include two cargoes of Japans and Greens, making a total of 988,549 lbs. There is an improved feeling in the market for all kinds, and a more active enquiry for Greens and Japans, with considerable sales at full prices.

TOBACCO.—The market has been somewhat irregular; Kentucky leaf was more active at a shade lower prices. Crop prospects are excellent, and holders are more disposed to realize.

Halifax Market.

SEPT. 8.—BREADSTUFFS.—Flour in fair demand and prices tending downward. Canada No. 1 $7.80 to $8.10; extra $8.50 to $8.75; extra State $7.75 to 7.90; Baltimore super. $7 to 7.25; extra $8 to 8.25; rye without change and dull at $6.50 to 6.60. Cornmeal in fair enquiry at $4.60 to 4.70 for kiln dried, fresh ground at $4.40 to 4.50. Oatmeal dull at $7.85. Imports from Jan. 1st to Sept. 8th, 1867 and 1868:

	Brls. Flour.	Brls. Cornmeal.
1868	123,389	39,381
1867	112,549	29,133

WEST INDIA PRODUCE.—Sugars dull, and quotations may be considered nominal. Porto Rico 6¼ to 6½c.; Cuba 5¾ to 6c.; Barbadoes 6 to 6¼c. Molasses firm at 29½ to 30c. for Cienfuegos in bond, Rum—Demerara 52 to 53c.; St. Jago 43c.

Stock in Warehouse 31st of August, 1867 and 1868:

1868. Malasses, 2,843 puns., 243 tres., 209 bbls.; sugar, 2,483 hhds., 219 tres., 1,083 bbls., 343 boxes; rum, 606 puns., 1 hhd. 1867. molasses, 4,582 puns., 541 tres., 328 bbls.; sugar, 2,302 hhds., 62 tres., 987 bbls.; rum, 1,003 puns., 15 hhds., 21 bbls.

FINANCIAL.—Bank drawing rate on London 60 day sight bills 13 per cent. prem.; private 12 to 12½ per cent. prem. New York gold drafts at sight, 4 per cent. prem. Currency drafts 27½ per cent. discount. Montreal sight drafts 4 per cent. prem. Newfoundland sight drafts 5 per cent. prem.—*R. C. Hamilton & Co.'s Circular.*

Reciprocity Treaty.

The Quebec Board of Trade have decided to petition His Excellency in Council respecting the proposed treaty. They urge:—That during the past seventeen years, vessels built in the United States have been admitted to registry in all ports of the British Empire upon the same terms and conditions as vessels built in these Colonies, and they have also been admitted to the coasting trade of Great Britain on equally favorable terms. That the principal industry of the city of Quebec is that of shipbuilding, which is now in a very depressed state, and the artizans and laborers connected therewith, almost totally deprived of employment, for want of new markets for shippers. Your Petitioners therefore humbly pray that no Treaty of Reciprocity be concluded without a provision giving the vessels built or owned in the Dominion of Canada the right of registration in the United States, as is now enjoyed by the vessels of that nation in all the ports of the British Empire.

GREAT LAND SALE.

OIL LANDS! OIL LANDS! OIL LANDS

Now is the time to invest and to obtain an interest in the

GREAT OIL REGIONS OF CANADA.

LAND FOR THE MILLION.

Each acre may prove a fortune to the lucky purchaser. Attend the Great Sale on the 22nd instant. No such opportunity of investment ever offered before. Don't lose the chance. Will be

SOLD BY PUBLIC AUCTION

On the 22nd day of September, 1868,

AT ONE O'CLOCK P.M., AT THE AUCTION ROOMS OF

ANDREW HENDERSON, *Auctioneer.*

At No. 65 Yonge Street, in the City of Toronto,

Three Hundred Lots,

Of one acre each, being the west half of Lot 22, in the 10th Concession of

ENNISKILLEN,

And Lot No. 4, in the 11th Concession of the township of

BROOKE.

In the opinion of Geologists, this is considered to be the only locality in Canada where oil is to be found in paying quantities. These lots will be offered to suit the circumstances of the working people of Canada. Hitherto sales have been confined to the capitalist and speculator. The proprietor intends to offer them without any reserve that men with limited means may at once obtain a freehold at a most reasonable rate. They will be put up in lots of one or more acres, and thus bring them within the reach of all. Now is the most favorable time to invest, the increase in the price of oil will necessarily increase the value of Oil Lands, Let all, therefore, who do not wish to lose the opportunity of a good, safe and profitable investment attend the above sale.

☞ Title indisputable.

Plans may be seen, and conditions made known, at the auction rooms of

ANDREW HENDERSON, Auctioneer.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. The object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

The $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Company.

The affairs under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to have in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate counection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Montreal, 1st August, 1868. 52-5

CONSOLIDATION
OF THE
Bryant, Stratton and Odell Business College
AND TELEGRAPHIC INSTITUTE,
WITH THE
BRITISH AMERICAN COMMERCIAL COLLEGE,
Under the Management of
J. D. ODELL, AND EDWARD TROUT,
PROPRIETORS.

WHO having purchased from Messrs. Musgrove & Wright their interest and goodwill in the British American Commercial College, have succeeded in combining all the talent and securing all the advantages of both Schools, making the most extensive and complete institution of the kind in the Dominion, and the only one where the principles of actual business are successfully and practically taught.

Our rooms are extensive and complete, occupying separate buildings, and capable of accommodating 300 students. We employ a full corps of teachers, among whom are men of business experience, and the two **Premium Penmen of Canada**. Scholarships good in Montreal and in the principal cities of the United States.

For specimens of penmanship, circulars, &c., address,

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from ungrounnd *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company :—

"*To whom it may concern*:..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northam, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country, has been steadily prospering. The *Massachusetts Insura Reports* show that in nearly all important matters superior to the general average of Companies. It offer intending assurers the following reasons, amongst oth for preferring it to other companies:

It is purely Mutual It allows the Insured to tra and reside in any portion of the United States and Eur It throws out almost all restriction on occupation from Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note all cash company. Its Dividends are declared annu and applied in reduction of Premium. Its Dividends in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for e year the policy has been in force. The number of D dends will always equal the outstanding Notes. It pay losses promptly—during its existence never having tested a claim. It issues Policies for the benefit of ried Women beyond the reach of their husband's credit Creditors may also insure the lives of Debtors. Its Poli are all *Non-forfeiting*, as it always allows the assured surrender his Policy, should he desire, the Company ing a paid-up Policy therefor. This important feat will commend itself to all. The inducements now offe by the PHŒNIX are better and more liberal than those any other Company. Its rate of Mortality is exceedin low and under the average.

Parties contemplating *Life Insurance* will find it to t interest to call and examine our system. Policies iss payable either in *Gold* or American currency.

Insurance.

INSURANCE MATTERS IN MONTREAL.

(From a Correspondent.)

MONTREAL, Sept. 23, 1868.

We have had only two fires during the past week, both of livery stables, and both attended with the loss of valuable horses. The first was in Rapin's stables, where three horses belonging to the Beauharnois Agricultural Society, were destroyed. The total loss is estimated at $4,000; no insurance. The second fire was in the stables belonging to the Glasgow Hotel, where two horses were burnt; loss about $700, also no insurance.

You will see that anamalgation has taken place between the Citizen's Company (a local company which, so far, has not been required to pay the Government deposit, but must now do so) and the European Guarantee and Life Co., Messrs. H. Allen, C. J. Brydges, and W. Workman, Directors of the European, take their places on the Board of Directors of the Citizens.

FIRE RECORD.—Waterloo, Sept. 13—Mr. Newton's hop house, with its contents, was totally destroyed. The fire caught at one of the kilns, and for want of water, could not be stopt. Although there were soon a great many citizens present, for want of proper management, very little stock was saved, though it is the opinion of many that a large quantity of hops could have been saved, had the people known what to do. Mr. Newton loses his whole year's crop, the product of 35 acres, which he values at about $5,000, together with the building, worth between $2,000 and $3,000. He has an insurance of $4,000 in the Waterloo Mutual, and $2,000 in the Western. The uselessness of the fire engine, without a company, will certainly convince the council and people of the importance of having another company at once.—*Exchange.*

Sept. 17—A brick house owned by Mr. Jackson, of Berlin; loss on house estimated at $600; Huckett, the occupant, loses a like sum on furniture, tools, &c.; no insurance.

MULMUR, Sept. 5—The premises of John Hare, merchant, in the Township of Mulmur, were completely destroyed by fire on the morning of the 5th inst. Loss over $3,000; insured for only $600. Fire was accidental and the cause unknown.

THOROLD, Sept. 11th.—Barn of F. McMahon, filled with oats and hay; no particulars as to insurance.

QUEBEC, Sept.—A fire was set in a caleche under the porch of one Claude Caron, carter, St. Roch's. A portion of the inside of the vehicle was destroyed. On the previous evening a wooden box, the property of the same man, was set on fire. Both are the act of an incendiary, who has adopted this fiendish method of revenging some private grievance. The Fire Marshal has instituted an enquiry which will probably lead to the arrest of the guilty party.

MONTREAL, Sept. 15.—Stables in rear of Rapin's hotel, St. Joseph street; three valuable horses were destroyed; "Emigrant," imported at a cost of $1,700, "Old Beauharnois," valued at $1,100, and another horse, valued at $900. Why were they not insured in some good Live Stock Company?

ELMA, Ont.—A barn, with its contents, belonging to a Mr. Gabiel, of Elma, was entirely consumed on the night of Sunday week. It was a clear case of incendiarism, and the guilty party, a man named Beaken, has confessed that he did it through spite. Gabiel's loss is over $1,000.

ERIN, Ont., Sept. 13.—The barn on the farm of Mr. Sandford, of Erin, was destroyed by fire, together with the wheat which grew on twenty-five acres, worth $400, some hay, peas, etc., the product of 100 acres. Cause supposed to be incendiarism.

—The Ottawa Agency of the Provincial has been transferred to the Hon. Malcolm Cameron.

LAMBETH, Sept. 17—Barn of Mr. S. Reynolds; insurance $200. Incendiarism the cause.

GRAND TRUNK BOND INTEREST.—Notice is given, that a dividend on the postal and military service bonds, at the rate of £1 7s. 10d. ($6.77 currency) per £100 bond, having been declared for the half-year ending 8th August, 1868, the same will be paid on presentation of the bonds at Montreal.

NEW WATER WORKS.—At a late meeting of the Toronto City Council, a resolution was passed requiring the City Clerk to give notice, that application will be made at the next session of the Legislature for an act to erect new water works in the city.

THE LATE MR. PERCY M. DOVE.—With deep regret we have to record the death of Mr. Percy M. Dove, the actuary and manager of the Royal Insurance Company; who, to the great loss of his family and many attached friends, has this week passed away. Mr. Dove's knowledge of fire insurance business was very considerable, and he was examined before the Select Committee on Fire Protection, and some suggestions of his were recommended for adoption by the House of Commons. Mr. Dove made his last appearance in public at the annual meeting of the Royal Insurance Company, three weeks ago. His health was then in a precarious state, and on Monday last he expired at Claughton, near Birkenhead, at the age of sixty-four. Mr. Dove took the greatest interest in philanthropic and religious subjects, and his loss as an eminent actuary and man of deep religious principle will be extensively felt; but he has left behind him, in the highly successful position of the Royal Insurance Company, a lasting monument of his talents. Assisted by Mr. M'Laren in Liverpool, who will doubtless succeed to his post, and by his able coadjutors in London, Mr. Johnston and Mr. Fothergill, he brought the Royal Assurance Company to a point of success which entitles it to be recognized as one of the first institutions in Europe. Mr. Dove's name will ever live in the memory of those who have been associated with the growth of this most successful Insurance Company—*Investor's Guardian.*

ENGLISH OPINION OF THE AMERICAN INSURANCE SYSTEM.—The advantages accruing to the several branches of the Insurance business, through State supervision, which enforces normal development through healthful publicity, have been for many years manifest enough, in American experi-

ence. Even our egotistical Uncle John on the other side is now willing to admit its superiority, and English insurance journals in late years have earnestly urged upon Parliament the expediency of similar legislation for their offices. But every attempt thus far made in that direction has been met and defeated by the combined opposition of close corporations. Aversion to change of any kind is characteristic of the Anglo-Saxon temperament. Reforms, the need of which is patent and urgent, are secured by slow and painful processes, and sometimes under threats of revolution.

The London Journal of Actuaries and Assurance Magazine, in a complimentary review of Superintendent Barnes' Eighth Annual Report, expresses its conviction that the appointment of a "Government Inspector, with power to order Insurance Companies to publish Balance Sheets, would be productive of much good, and tend greatly to the protection of the public" in England. But even so intelligent an organ seems to be dazed by the idea of a really radical change. "We are of opinion, however, that the functions of such an officer should be strictly limited to obtaining and making public a true statement of the business transactions and the financial position of each company." That is to say, the "Government Inspector," who of all men connected with the business would necessarily be best qualified to offer, annually, useful suggestions and recommendations, should have no *public* opinions. In America, where corporations grow and prosper by abundant light and ventilation, there is no dread of official opinion, which is accepted on its merits only.

With respect to new and peculiar modes of transacting Life business, recently introduced by young American offices, such as the reduced Homœopathic premium rate, and the arbitrary modification of the average expectation of life, according to supposed special laws governing individual cases of vitality, as adopted by the American Popular Life Ins. Co., and noticed in the Superintendent's Report, the Assurance Magazine says:—"The experience of this country gives no encouragement to such novelties as these; for whenever anything of the kind has been attempted, it has been invariably abandoned after a few years' trial."

In footing up the aggregate of American Life businessfor 1866, our contemporary is not a little surprised: "The magnitude of the American Life offices far surpass anything that this country can show. It appears to be a law of nature that everything in the New World, whether in the realm of nature or art, shall be on a larger scale than in the Old World." And the qualifying *caveat* is well put, and deserves the especial attention of not a few young offices, now paying 25 to 40 per cent. for business. "It seems doubtful whether the assured receive any advantage from the magnitude of the offices; for the expenses of management appear to bear as large a proportion to the premiums as in England; if indeed the proportion be not larger."—*Insurance Monitor.*

ANNUAL REPORT OF THE INSURANCE COMMISSIONER FOR MASSACHUSETTS.—Mr. Sanford, the able Commissioner of Massachusetts, comes before us with his Annual Report; one remarkable for reach of view, and vigor of statement.

The number of companies made the subject of his report is 47, showing an increase of 3 in 1867, and this year 3 more have been admitted. The growth of Life Insurance is strikingly shown. No less than 62½ million dollars were paid to the 47 companies, in all 1867, by 430,000 policy holders, of which 9½ millions were paid out for claims on death. 40,000 policies are stated to have been allowed to lapse by policy holders, involving them in a heavy loss, but the Massachusetts laws appropriate this money to the insurance of those who paid it. The Commissioner raises the question whether these 47 companies are all funding enough to meet their enormous future obligations, or whether, between the ambitious struggle to pay large dividends to the assured on the one hand, and the temptation to pay large commissions to agents, large salaries and perquisites to officers, and large royalties to stockholders, on the other; the bottom of the fund may not be reached at a day more or less distant, with a few hundred million dollars unprovided for. In this young country no such precedent has occurred, but there are many such in England. The Commissioner points out that that the great *necessity of Life Insurance is accumulation* at every period of its existence, a life company must have a fund growing with its growth, increasing with its age and business, devoted to coming obligations. So long as a company can respond to the great law of accumulation and reserve, stability is secured. The legislature of Massachusetts, which recognizes the importation of an effective supervision, applies a test by an "annual valuation of policies." This valuation has been made by aid of the tables published by Elizur Wright.

The only test of stability is the reserve or accumulation fund. The fundamental laws or assumptions on which life insurance proceeds, are a rate of mortality sufficiently high, and a rate of interest sufficiently low.

The Commissioner adheres to the Actuaries' table of mortality, and 4 per cent. on the rate of interest. In the State of New York, the rate of interest established by law for the valuation of Life Insurance Companies is 5 per cent., and the mortuary table used, is the combined experience or Actuaries' table. The Commissioner's next discussion is the question of assets. What is to be considered a legitimate present asset deserving to be counted as a part of the solid reserve fund? Real Estate is allowed to be good investment, and U. S. securities which form about two-thirds of the gross assets, and about four-fifths of the aggregate reserve fund. All accrued interest is admitted to be a good asset. Unpaid and deferred premiums, if including only the balances of annual premiums on policies in force, the first instalment of which fell due during the year, and that these premiums or balances not having been collected or received by the company, do not appear elsewhere among its assets, are likewise good assets, as in making the valuation of policies to which these premiums attach, it is assumed that the premiums have been all received. The premium notes and loans are next discussed as to their being good assets. They are admitted to be safe for the company, and may be, therefore, counted among its legitimate or realized assets. The note system is thus made to appear as not bad for the company, though not so apparently for the policy holders who are deluded by it. Some companies have returned "commuted commissions," loans to agents, purchase of agents' annuities, &c., as assets. These are disallowed as not being *real* assets.

The question of expenses is next discussed, as one of the utmost importance.

The mortuary record as shown in the experience of the companies is passed over, and instead thereof, is presented Mr. Levi M. Meech's life tables of the United States, prepared at the Commissioner's request.

The last subject discussed is that of the distribution of surplus.

The old per centage system is condemned, and the new system devised by Messrs. Shepherd Homans, and D. P. Fackler, shown to be the most equitable, which secures to each insurer a return of premium according to the amount of premium he has paid.

The contribution plan recognizes the constant sources of surplus—a higher rate of interest than was assumed, a lower rate of mortality than was expected, and a less per centage of expense than was provided for in establishing the premiums and reserve of the company. These resources yield a surplus which varies with the reserve on each policy, with the age of the insured, and with all the terms and conditions of the insurance. The system adapts itself to the incidents of each policy, and returns the surplus earnings from interest, and the excess of the payments for mortality and expenses which belong to it. In word, it seeks to give to each of the insured, t surplus which his money has earned or creat It requires no other statement than this to demo strate its theoretical equity. The actual adapt tion of the plan is demonstrated by the fact, th its formulas are deduced from and harmonize wi the fundamental processes of life insurance, wh no mathematics either suggest or justify the p centage plan.

In the appendix to the report, are communi tions from various officers of the companies whom the Commissioner had applied for inform tion as to their opinions on the best mode of d tribution.

PERSONAL APPLICATION.

It is a false delicacy which induces Agents abstain from *speaking* to their friends and nei bours on the subject of Insurance. It is a ma of regret that too many are content to be silent the subject, and to trust alone to the mute app of bills, books, boards and brass plates.

If by any ingenious method short of a di personal application persons can be induced propose, these agents are quite willing to adop But to call on a man and explain to him that surance is a highly beneficial scheme which possibly be of inestimable future value to hin to urge upon a decision which he is more than persuaded to, is *infra dig.* This delicacy is justly founded. The dignity of an archbi would in no way suffer, should he press up man the advantage of assuring his life or goods.

It not unfrequently happens that the soli tion to a man to assure saves the necessity w would otherwise afterwards exist of solici charitable assistance on behalf of his chil Which is the more preferable? To ask a ma assure out of his own independent resou or to beg the favour of numerous votes and interest of the voters, on behalf of his sons daughters? No delicacy is felt about the l Surely none should be felt about the fo There should be no hesitation about persona plication in so good a service.

IN NO BUSINESS IS IT MORE NECESSARY. surance wants explaining. To many it is a tery of mysteries, a something which is expensive, and which people in good circumst indulge in, a luxury for those who eat early c bers and the first peas. They are not at all how it is obtainable. Some seem to have a impression that the entrance is a shadow rites of free masonary. As to whether it co pound or twenty pounds, what the condition and as to the mode of procedure, there are to be found everywhere who are perfectly ign Nor are they limited to any class.

But even where a knowledge is possesse personal application is not the less nec Nine out of ten are indisposed to assure at unwilling to do it without an infinite dela is the one transaction of all others, about there is no hurry. Tomorrow will serve as to day, and next year will suit as well present one.

Again, so much depends in Assurance ability of the issuers of the contract to fulf a future day. The quality of the Assuran pends, as it were upon this, and personal ex tion is eminently necessary to show the v the commodity offered. A circular will convince a man of the soundness of an O fully as *viva voce* replies to all his interrog If then an Agent desires to be sucessful, make up his mind for "personal applicati an extended scale. All the ways for org an Agency which have ever been practis before this.

IN NO BUSINESS IS IT MORE SUCCESSFU success is seen every day. It is seen i town and city, almost every hamlet. It in the records of every Insurance Office.

atively very little bnsiness is procured withont citation by Agents. So great has been the eess of the Ageney system of Insurance Comies during the last fifty years, that trading ns of all kinds have imitated it and planted ir Ageneies in every direction.

'If the monntain will not come to Mahomet, homet mnst go to the monntain." And so it been that as the people have not flocked to be ured, the Agents have taken Assurance to them. t it has been the personal contact, the active citation, the forcible illustration, the lucid planation, the urgent persuasion of the Agent free conversation with the people, that have nneed the success. No other class of institutis, and no section of commerce, can show so ny large ineomes permanently obtained as the ult almost solely of personal application.

N NO BUSINESS IS IT MORE EXCUSED.—Insnre Agents are always freely exeused for seeking posals even from comparative strangers. The dentials they present of their being the repretatives of a well-established and prosperous upany, "known to fame," is a passport for m. If there no commission attaching to the otiation, the aet would be the essence of nd philanthropy bnt the benefit which an rer is likely to reap from a policy is so much ger than any the Agent ean possibly derive from commission, that the invitation to propose t bears the aspect of a personal service. On ry hand the proofs have been multiplied of late rs of the sterling advantages which Insurance ds, and this has paved the way for a courteous eption of the subject when presented by a rteons Agent. Many another representative n would be shown the door, while the Agent of Insnranee Offiee is received with respect. Some he unsound Companies have let loose on soy vulgar and untutored men—impecunions and racterless; and these often meet with the fate ly always deserve. It wonld be the same if y were in any position. For the worthy Agent substantial Company, there is always a ready use even for some intrnsion in a personal applion.

gents who have tried this system need no urgto repeat it. But to all who have never yet eavored to establish an Agency we say emtically, try methodically and for a season, on onsiderable seale, *Personal Application.—Insance Agent.*

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ing 4th Sept., 1868.

Passengers	$38,480 53
Freight and live stoek	45,434 45
Mails and sundries	1,767 93
	$85,682 91
Corresponding Week of '67.	78,645 30
Decrease	$7,037 61

NORTHERN RAILWAY.—Traffic Receipts for k ending Sept. 12, 1868.

Passengers	$3,475 26
Freight	7,915 77
Mails and Snndries	260 82
Total Receipts for week	$11,651 85
Corresponding week 1867	9,909 13
Increase	$1,742 72

VELLINGTON, GREY AND BRUCE RAILWAY.—Hamilton papers say that the tender of Messrs. & J. Hill, for the constrnction of the first ion of this road has been accepted, and that work will be gone on with at once.

RAILWAY BONUSES.—The Township of West Whitby passed a by-law on the 19th inst., granting a bonns of $15,000 to aid in the bnilding of the Whitby & Port Perry Railway. On the same day, the Township of Uxbridge passed a by-law granting $50,000 to aid the construetion of the Toronto & Nipissing Railway.

RAILWAY APPOINTMENTS.—The Windsor *Record* says, several important changes took place in the staff of the Great Western Railway officials at this station. Mr. Craft, snperintendent of the through traffic, removed his office and the whole corps of clerks to Detroit, which will, hereafter, be his head quarters. Mr. Dow will remain station-master here, and will, in addition to these duties, act as local freight agent; Mr. Stonier will be eashier of the local freight; and Mr. Jones, who has heretofore had charge of the freight department in Detroit, will shortly be promoted —most likely to be general western agent.

A NEW PROPOSITION.—A gentlemen writing from Quebec to the *Investor's Guardian*, London, England, under date of 14th August, after some introdnetory remarks, makes the following suggestion :—

"I now come to the real point on which I wish to address you, and this has reference to yonr inquiry, on behalf of several shareholders, whether "an American railroad company or companies could not be got to lease or work the Grand Trunk, and leave a sufficient amount to eover certain bonds and the other preferences on the other side?"

To this really important qnestion I, with some practical leading railway parties in Montreal, have not only devoted some time and attention, bnt we have gone so far as to lay it before gentlemen intimately associated with very important railroad interests connected with Boston, U. S.

We first of all proceeded to work out what was at present stated by the directors to be the annual net revenue of the whole Grand Trunk system, and assuming this net revenue at £1,400,000, and comparing their present outgoings or expenses, which amount really to about 80 per cent., we showed them that on this amount 10 per cent. at the very least can be saved—say.....£140,000

Ditto, by working in unison with these American railroad lines connected principally with the outside agencies	15,000
	£155,000
Ditto salaries of chief officers in Canada, of president and other officers in England	10,000
Improvement to net revenne by working under this proposed system	40,000
	£205,000

These statements were given them of conrse in detail, and, through these figures, a knowledge of which these gentlemen were almost as conversant with as ourselves, we fully satisfied them of the safety of embarking their interests with such an almost bankrupt concern as the Grand Trunk.

The result has been that, concurring in these views, a gentleman, intimately acquainted with these railroad parties, and with all the details as to how the American railroads are worked, will go home by the steamer 'Nestorian' on the 22nd from here, and on arriving at Liverpool will immediately proceed to London, prepared with an offer to rent certain portions of the Grand Trunk, or the whole, on certain terms and conditions, the principles on which the offer is based being a lease or rent of the whole line, backed by capitalists of Boston, who could produce guarantees for *one million dollars* if required, they agreeing or binding themselves to pay over (over and above whatever the net revenne may be on 30th June last) a elear snm of upwards of two hnndred thousand pounds—a result which, I feel sure, without some such combination in connection with these railroads in the States connected with Boston, will not be obtained under the present system.

Mr. H——, the gentleman named, will have letters of introduction to several railway authorities.

I am satisfied that the more any one looks at the "past" of the Grand Trunk, and takes in a review of its connection with the great trades or traffic of this Continent, the more he must be impressed with the actnal necessity of engrafting it more and more into the present great American system of railways. Withont them it is entirely at their mercy, and *per se*, it may go on for years trying to carry their traffic at "through" competitive rates, and it will continue to fail; but connect it with these interests "thoroughly," and before many years are over it would be paying a dividend on the whole £100 stock *now worth* £16 *to the* £100!"

GRAND TRUNK.

Let us snppose that the traffic on the line is worked at 60 per cent. This we believe is ample to pay all working expenses, inclnding renewals for fully keeping the line in repair, if the line throughout were in good order. 40 per cent. as the fair working profit would be about £550,000 a year. All the interest, &c., charges prior to the 1st preference are about £200,000 a year, leaving say £350,000 for the 1st, 2nd, 3rd, and 4th preferences, as far as it would go in meeting those claims. Now the 1st preference interest is some £125,000 a year, the 2nd preference £68,000, the 3rd preference £28.000, and the 4th £150,000.

	Per Annum.
1st preference	£125,000
2nd "	68,000
3rd "	28,000
4th "	150,000
	£371,000

It follows that if the profits were only 40 per cent. of the traffic, if the working expenses were as high as 60 per cent., the present profits would be nearly equal to paying the 4th preference in full after discharging every claim of 1st, 2nd, and 3rd preferences.

But the Company want to renew large portions of their line with better rails, &c., so as to have a first-class road. How are they to do it? They can't raise further eapital.

If the £350,000 be employed in renewing the road, &c., the renewals may be done all the sooner, but the 1st preference eannot be paid in cash. The 1st preference, however, are crying ont lustily for their cash dividends, and if they cannot (and we believe they cannot) have any for the past June half-year they will try for some in the current December half-year.

Under the Arrangements Act the 1st and 2nd preference Bondholders are really nothing more than preference Shareholders to the end of 1872. After that, from the beginning of 1873, they are Bondholders, and then their interest (and that of the 2nd preference bonds) must be paid, but until that time arrives if the management uses their money in renewals they cannot prevent it. The only thing they can do is to change the management.

A large and important section of the Grand Trunk Proprietors are dissatisfied with the management of the line. They believe that resnlts widely different from the present could be obtained by better management; that the working expenses could be materially economised, and a mnch larger revenue balance left either for renewals or for preference dividends. Out of a gross revenue of £1,350,000 a year we think at least £550,000 profit may be had. This would leave the working expenses at about 60 per cent., or nearly £600 per mile per annum. Speaking recently with a railway authority who had travelled over the line, he agreed with ns that about £600 per mile per annum, or 60 per cent. of the present traffic, ought to be very ample to cover all working expenses in respect of the present traffic, including a large sum for maintenance.

Besides ordinary maintenance no doubt the line requires most extensive renewing, in fact rails, &c., which it never had, new stations, sidings, fish-platings, signals, trimming and draining of the slopes of cuttings, wharfage, completion of ballasting &c. Undoubtedly the Company require a large sum to expend in completing and perfecting their great line. This circumstance seems to us to amount to additional evidence of the importance of working the traffic with the greatest economy, so as to extract from it the largest amount of profit, or this profit could either be applied to doing the renewals, &c., or to paying the preference dividends. If employed in finishing the line it would be advantageously used, for this would enable the Company to carry more traffic, to earn a larger profit, and when the 1st 2nd, 3rd, and 4th preference holders knew that the money to pay their dividends was earned but spent in the line, they receiving paper dividends in lieu thereof, they would know that it could only last for a comparatively short period; that it was for the good of the Company, and ultimately for their own benefit, If, on the other hand, the money was paid away in dividends upon the 1st, 2nd, 3rd, and 4th preferences the credit of the Company would be so improved that they could easily raise the required additional capital on a second equipment mortgage. There would clearly be an advantage to the Company in the enlargement of the working profits. It is a perfectly legitimate and highly useful proceeding on the part of the Proprietors to closely investigate the affairs of the Company, with a view to a thorough reform in the management. If they find that a different system of management would place at their disposal a much larger amount of working profit they are entitled to carry the reform.

It is important to place the Grand Trunk railway, at the earliest moment, in the best condition for carrying traffic. Canada is a rising country. The population and business of Montreal have nearly doubled in the last few years, and the great towns of the Dominion generally are "looking up" with a bright aspect. The Intercolonial railway is carried, and this will do the Grand Trunk much good, always provided they do not lose by its working (if they work it)—which seems to us a further reason for the Proprietors to closly attend to their affairs. As it is the Grand Trunk traffic has greatly increased. In the last report of the Directors it is stated—"In 1861 the gross traffic of the line was £920,579, whilst in 1866, on the same mileage, it was £1,356,795, or an increase of 47½ per cent." Without another mile of line it will, we believe, be £2,000,000 by 1873, if the Intercolonial is then in operation, and if the full working powers of the line are brought to bear. We say, then, that there is something substantial to get by good management, and we should consider it the worst of management, to neglect placing the line in the best order and the rolling stock in full supply and condition.

£2,000,000 a year gross income, from which probably the net would be £1,000,000, would render the Grand Trunk a highly successful undertaking.—*Herepath's Journal.*

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

MONTREAL, Sept. 22, 1868.

Very little is doing in money circles and the tone of the market is unchanged; so far, very little accommodation is asked at the banks for money to remove grain; good paper is scarce and there is to alteration in rates either at the banks or in the street. Stocks are scarce, but the enquiry is moderate. Bank of Montreal would sell freely at 135¼. British in demand at 103, but none in the market. Ontario a shade better. Merchants' dull and heavy. Peoples' in light request at 105¼. For City 102 is offered without attracting sellers. Toronto held at 117, but no buyers over 115½. Miscellaneous stocks are generally held for high figures but not much movement in them. Gold has slowly declined during the week, the market closing at 142⅜, this is owing to the low rate of sterling exchange in New York, which is only worth 8¾; so far the Presidential contest has not affected the gold market, to what extent it will remains to be seen. Greenbacks buying price 30½, selling 29¾ to 30 dis. Gold drafts in New York par to ⅛ dis. Silver in good supply at 3¼ buying, and 3 selling. Sterling exchange dull at 9 to 9¼ for bank.

The *silver nuisance.*—As promised in my last letter I now give you a synopsis of Mr. Weir's Circular on this subject. Last spring Mr. Weir made an effort to abate the nuisance, but it was not sufficiently comprehensive to affect its object, and lately, he has been delayed in taking any action, being unwilling to interfere with the movement in the Province of Ontario, which at one time promised considerable success. He goes on the basis that the duty of 15 per cent. on American silver is prohibitory, therefore, if the surplus silver can be exported from the country, and kept out of it, the evil will be removed. The total amount of silver in the country has little to do with the rate of discount, it is only the quantity not required for *change*, which accumulates in the banks and broker's hands, this sum he estimates at $1,000,000 and another million in the hands of the public which could be spared. *He proposes to export two million dollars, say* $50,000 *per week for forty weeks, commencing the 15th October next.* The removal of that amount would leave little more than is required for small change and reduce the discount permanently to one or two per cent., causing the volume of business to be transacted in gold and bank notes. The cost of exporting $50,000 silver, purchased at 2½ per cent. dis. will be (including commissions, interest, &c.) about $3,000, which amount he proposes to raise in accordance with a form of contract, but should the support tendered fall short of the amount required to insure him against loss, of course the movement falls to the ground.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Very little doing in the stock market owing to the scarcity of securities.

Bank Stock.—Very few transactions in Montreal stock; buyers offer 134½. Sellers ask 98 for Ontario, and sales occurred during the week at 98½ and 98¾. Small lots of Toronto offer at 116 to 116¼. There are buyers of Royal Canadian at 91 for paid up stock. Buyers offer 104 for paid up Commerce. Sellers ask 105½ for Merchants', buyers offer 105. There are sellers of City at 102½ and buyers at 101½. Du Peuple is held at 105½. Buyers offer 106 for Jacques Cartier. Sellers ask 97 for Mechanics', buyers offering 94½. There are buyers of Union at 102, and sellers at 103. In other banks nothing to report.

Debentures.—Canada are in great demand. No sterling six per cents in market. Five per cents offering at 91, and Dominion stock at 101¼. There were sales of short date Toronto bonds to pay 7 per cent. interest. A few County are offering at high rates, and small lots have been taken.

Sundries.—Building Society Stock is again up and is now saleable at rates never before reached; the last sales of Canada Permanent were at 119½. Buyers offer 112½ for Western Canada; no sellers. Freehold sold at 105½ and 106½, and is in demand. There were sales of Montreal Telegraph at 134 to 134½. Buyers offer 62½ to 63 for Canada Landed Credit, $20 paid. City Gas sold at 105 to 105½, and is offered at 105, ex dividend due 1st October. British America was offering at 56; no sales. Mortgages, none to be had. Money continues very easy, and offers at low rates on good security.

AMERICAN SECURITIES HELD IN EUROPE.—T
N. Y. Financial Chronicle gives the follow
table of the amount of American Railway
Canal Stocks owned in Europe:—

Atlantic and St. Lawrence Railroad sterling bonds		$484,
Eastern R.R. (Mass) sterling bonds		610,
Western R.R. (Mass.)	do. ...	4,369,
Erie Railroad	do. ...	4,850,
Panama Railroad	do. ...	1,912,
Camden and Amboy R.R.	do. ...	1,740,
South Carolina Railroad	do. ...	2,275,
Pennsylvania Railroad	do. ...	2,126,
Philadelphia and Reading Railroad, sterling bonds		970,
Baltimore and Ohio Railroad (Md. guar.) sterling bonds		3,000
Eaton and Hamilton Railroad		130
Marietta and Cincinnati R.R...about		200
Detroit and Milwaukee Railroad		150
Michigan Central Railroad		867
Chicago, Burlington and Quincy Railroad bonds (Frankford)		1,552
Illinois Central Railroad, ster'g bonds		3,104
Troy and Greenfield Railroad		50
Mobile and Ohio Railroad		4,59
Total		$33,4

Sterling Canal and Water Bonds:—

Boston Water bonds	$1,949,000	
Chesapeake & Ohio Canal bonds	1,949,000	
Susquehanna and Tidewater Canal bonds	816,000	
Illinois Canal bonds	1,850,000	
		$8,98
Total Canal ster'g bonds		8,98
Add further for dollar bonds, railroad and other, including $35,000,000 Illinois Central		60,0

Add further for Railroad stocks:—

Atlantic & Great Western	$15,000,000
Erie	6,000,000
Illinois Central	17,500,000
Philadelphia & Reading.	10,000,000
All other roads	7,500,000
Total Railroad stock	56,0
Total transportation securities	$158,4

The issues of the five-twenties of 1862 is 000,000; and from the extreme scarcity of bonds it is very generally conceded that t nearly all held abroad. Of the sixes of 188 are $283,000,000 outstandingr which also ar cipally in the hands of foreigners. The pre for ten-forties, on acoount of the specific for the payment of the principal in gold, have drawn out of the country less than $2 000 of those bonds; while the minor amo all other issues combined cannot be estim less than $50,000,000. So that the total of United State bonds held abroad must nearly $700,000,000, or possibly more. together, then, the foregoing items, we h following result, as the amount of all k American securities held in Europe:—

United States bonds	$700,
Sterling bonds issued by railroad companies	33,
Sterling bonds issued by canal and water companies	8,
Dollar bonds of railroad and other companies	60,
Railroad Stocks	56,
State Stocks	60,
Municipal and miscellaneous stocks,	22,
Total estimated amount of American securities held abroad	$938,

—It is stated that the Ontario Legisla meet on the 3rd of November.

THURSDAY, SEPTEMBER 24, 1868.

BANK STATEMENTS AND STERLING BILLS.

In directing attention to the duties and responsibilities of Bank directors, we urged the necessity of a careful and intelligent supervision of the bank affairs, free, on the one hand from mere prying curiosity and injudicious interference with the rights of the cashier, and on the other, from passive inattention to the banks' position and interests. We also condemned a too careless acceptance of mere general information, as if that were all which is entailed upon directors by their office. It is true that a cashier has a great deal of power, and if his character and ability be such as to command respect, his suggestions and advice will have the greatest weight with his directors. The latter being selected for their respectability or business knowledge, are supposed to bring to bear supervisory powers which derive value from their experience in business, but their acquaintance with banking principles is, of course, limited, and their knowledge of detail in the bank's operations must of necessity be imperfect. They have not time to examine every transaction thoroughly even if they had the opportunity. They express opinions and adopt resolutions as to future action, and the cashier has upon his shoulders the onus of working out their wishes. Such being the case, one can easily understand how important it is to have carefully prepared statements submitted to them. In some banks the statements are of such a character that the directors can at once appreciate the nature of the business done, not only in the aggregate, but in elaborate details which their business experience can grasp and dissect. It is for them to insist upon such statements as convey the necessary information being produced by the cashier, and it is for the cashier to devise such forms of statement as will place affairs in the clearest light. When we remember that directors are not only called upon to give judgment on the advisability of increasing or decreasing accommodation to individual customers, but also to understand the bank's relative powers and position in the ever changing aspects of the trade of the country, and even its safety in times of financial difficulty, we can estimate the value of full and accurate information.

It may fairly enough be assumed that no better or truer statement of a bank's position could be desired by a director, than the general balance sheet with a synopsis of the particular accounts which appear on it. To that one would naturally look for information, and probably no better guide could be suggested for acquiring a general knowledge of how the bank's affairs really stand. There is, however, an important particular in the preparation of those balance sheets which renders them an unreliable guide without explanation from the cashier. They are supposed to show the whole of the bank's liabilities and the whole of its assets, but we contend that they do not serve that purpose. By a strange anomaly, bills discounted which happen to be drawn payable in Europe, never appear on the balance sheet at all. No matter what may be their number, their character, or their amount, not one of them is seen under the proper heading of "Bills Discounted," in the bank's statements. They are rigidly excluded from that, the most striking asset in the balance sheet. In referring to this practice, in a former article, we were not aware that the point had been made before, but we find in the answers to the Senate questions the following:

"Many if not all the banks charge sterling bills of exchange to their English correspondents, the moment they are purchased or sent off by mail, although they may have 60, 90, or even 120 days to run before maturity. By doing so, these bills disappear from the balance sheet of the bank, notwithstanding its liability for their endorsement. They ought in all cases to appear amongst the assets of the bank until paid, being as much 'bills discounted' as any other bills cashed by them."

This extract will be found in the evidence of Mr. Morton, whose experience in the Bank of Upper Canada doubtless taught him how dangerous such a practice as that we complain of might prove. As we have said, we were not aware when the previous article was written that we were but following in Mr. Morton's footsteps; and while we apologise to that gentleman for the seeming appropriation of his idea, we are glad to be able to cite a gentleman of his ability and practical banking experience as an authority in our favour.

The practice complained of, is manifestly wrong. It is surely absurd to suppose that a bill drawn at 90 days on Montreal, New York or Baltimore, ought to be charged to

"Bills Discounted" and looked upon as an asset until paid, but that a bill in all respects similar which happens to be drawn on a house in Europe should not be regarded at all as an asset by the bank although it cashed it! Yet such is the case practically, for there is this difference in the treatment of these two classes of advances on bills, viz., that while a bill drawn payable in America is held on the balance sheet as an advance carrying with it a certain risk until paid, no matter how good the names may be; a bill drawn payable in Europe is treated as if it were actual cash, no matter how weak the names to it may be.

We are fully aware of the causes which have given rise to this reprehensible practice. We know that bankers in England receive mercantile bills of exchange from Canadian bankers who keep accounts with them as if they were so much cash, to this extent, that when indorsed by the bank sending them they are looked upon as a credit to be drawn against. This being the case the Canadian banks are in the habit of charging these mercantile bills to their English correspondents as if they actually were cash remitted, while, by way of balancing the charge, they credit their English correspondents with such bills as they themselves may draw. The practice has undoubtedly its conveniences. It saves some little trouble in bookkeeping. But the mere fact that a London banker accepts the exchange of a Canadian bank against the hypothecation of indorsed mercantile bills, does not render such mercantile bills cash. If unpaid, they are returned upon the bank in the same way as any other unpaid bills, and, therefore, they ought to appear amongst the assets under their proper heading until paid or until it can reasonably be supposed they are paid. Let them be charged to that account till then. Exactness of accounts, which we are entitled to expect in a bank, demands this. If the bank desire that its statements should have a good appearance and be, at the same time, perfectly correct, no great harm would be done if it were to include among the "cash deposits" these bills of exchange which have not matured, drawn by itself on its English correspondents. This latter is, however, a matter of little consequence and may be safely left to the bank's discretion.

Some banks include their English bills in a memorandum book purporting to shew the liabilities of customers, but this is not enough. It does not fully meet the case. The custom of charging these sterling bills purchased, or, in other words, discounted to English bankers, when mailed instead of when paid is one which, we believe, prevails with almost all the banks in Canada and, we repeat, that it is a custom open to the greatest objections. It practically amounts to a re-discounting of customers' paper without recording on the balance sheet the amount of such re-discounts, and is a use of the bank's credit which may, at any moment, merge into an abuse. So long as such a system prevails, so long will there be a risk of false impressions as to the true position of a bank's affairs, when the concealment of imprudent advances becomes desirable. Under such a practice, indeed, it becomes an easy matter, or, at least, quite possible to conceal a bad debt from the balance sheet, and keep it out of sight perhaps for years, by merely transforming it into a sterling bill of exchange, and keeping it constantly renewed. But even if there were no danger of such an extreme result flowing from the practice, the fact that it enables a Cashier to make heavy advances to a certain class of customers without in the least degree swelling the item of "bills discounted" is sufficient to condemn it.

TRADE MARKS.

Of late years reputation as a marketable commodity has greatly increased in importance, the measure of it has been ascertained and the value enhanced. In speaking of reputation we mean that intangible ideal property founded on the tendency of mankind to follow each others' lead, to lodge where they have lodged before, "the probability of the old custom reverting to the old place," which is commonly called good-will. For many years the good-will of inns and taverns has been recognized, bought and sold and protected by the courts. It grew up at the time when the means of locomotion were scanty and slow, and lodgings at way-side inns were large items of expense to the traveler. At that time trade was stationary and goods were to a great extent sold in the locality where they were manufactured. Railways came and swept the country hostelries away, good-will and all, killed off local industries and centralised production in large manufacturies, whence goods were sent at prices and of a quality with which it was useless to compete. And with the new life and new modes of doing business, good-will assumed another phase and is now commonly called trade marks. The food we eat, the wines, beer, and spirits we drink, the clothes we wear, the needles and thread with which they are put together, everything in fact comes from large factories, are sent wholesale to every part of the world, and are compounded and prepared by companies, managed with unwearied energy, skill and care. Consequently it becomes of the utmost importance to both the vendor and purchaser that the goods sold should be what they pretend to be and that imitations of well-known names, marks and labels, should be prevented.

Accordingly, a branch of mercantile law is being consolidated, defining what are trade marks, what are imitations, where courts will interfere against, and what restrictions will be placed on and damages awarded against imitators.

Trade marks may for general purposes be defined as a peculiar name, design, word or arrangements of words by which a certain quality of goods of a certain proprietor has become widely known and acquired a marketable value, and such a marked name that ordinary buyers using the name would at once get the article required.

Imitations consist of such a general similarity of form, color, or name, as to have a direct tendency to mislead ordinary buyers. Where ordinary attention on the part of purchasers would enable them to observe the imitation, it is not, in the eyes of the law, an infringement of the trade mark, but if the ordinary mass of purchasers, paying the attention which people would usually pay in purchasing the articles in question, would probably be deceived, then courts would interfere. It must appear, however, that there is such a distinctive individuality in the mark or name employed by the counterfeiter, as to procure him the benefit of the deception resulting from the general resemblance between the genuine and the counterfeit.

The name or designation must, however, have a distinctive peculiarity. In the celebrated essence of anchovies case, where Burgess, the son, used the same name as his father, viz: "Burgess' essence of anchovies," and the father tried to restrain him from doing so, an eminent judge remarked that "no man can have any right to represent his goods as the goods of another, but in those cases it must be made out that the defendant is selling his own goods as the goods of another." In another case, a manufacturer had applied for protection against parties using the name "white soft soap," by which his own wares had become known, but as every person making white soap would have been entitled to call it by the same name, the application was refused. To illustrate the principle, the use of the name "imperial soap" with the addition of a star, was forbidden even when the name bibassic was inserted on the ground that it was an infringement of the chief part of a name or label by which the plaintiff's goods were well known, and the use of which, by the defendant, the public were deceived.

Trade marks which contain false representations will not be protected.

To obtain the assistance of the courts, the ties seeking it must apply promptly on ertaining the infringement; indolent ob- vation of the public advertisement of the ringement or the display of the labels, is ated as acquiescence, and good ground for using relief when the application is made he time afterwards.

As soon as a case of infringement of trade rks is proved, the courts will interfere by unction, restraining the imitator from ng or selling the counterfeit, and con- nning him in expenses, and thereafter, h the defendant and all other persons wil- ly using it will be liable to an action for nages at the suit of the true owner.

A very simple and inexpensive system of istration of trade marks has been for some rs in force in Canada, England, and ost every country boasting of large manu- tories, and this system is eminently useful h in preventing innocent imitations by nest dealers, and in enabling proprietors prove their own trade marks, and the gth of time during which they have been use.

IE COTTON CROP OF THE STATES.

Several American journals publish state- nts of the crop and the course of the ton trade for the year ending Sept. 1st of present year. From these it appears that whole crop amounted to 2,498,895 bales, inst 2,019,774 bales last year. The ex- rts from the United States were 1,657,015 es, and the stock on hand at the close of year 38,130 bales. In the interior towns stock of cotton at the above date was 97 bales, against 5,703 bales the previous son. The total receipts at the Atlantic d Gulf shipping ports were 2,240,282 bales, inst 1,965,774 bales last year. If we add these figures the amount shipped directly manufacturers, we have the total crop as ove given.

Of the different cotton-growing States, uisiana stands first in the quantity of cot- n raised, the total being 584,240 bales, ainst 702,131 bales last year; then come orgia, Tennessee, Alabama, South Care- a, Virginia, Texas, etc., in the order med.

The yield of cotton steadily increased from 0,000 bales in 1820-21, to 4,669,770 bales in 59-60—the largest crop ever raised. Du- ng the war no record was kept, but since e war the amount produced has increased arly half a million of bales, showing clearly at this important interest is reviving. The eld of Sea Island cotton was 21,275 bales, ainst an average of about 45,000 bales in e six years immediately preceding the war.

Prices in Liverpool ranged from $10\frac{1}{8}$ to $15\frac{3}{4}$ in 1866-67, and from $7\frac{1}{4}$ to $12\frac{5}{8}$ in 1867-8, showing a much lower range of prices in the latter year.

NOVA SCOTIAN FINANCES.

The Estimates for 1868 have been laid before the Nova Scotia Legislative Assembly. The expenditure up to the 31st December is estimated at $563,880, and the income $551,088 76, leaving a probable deficit of 12,791 24 made up as follows :—

ESTIMATED EXPENDITURE.

Civil List	$41,800
Criminal Prosecutions	3,000
Coroners' Inquests	2,000
Education	165,000
Immigration	800
Legislative Expenses	34,000
Miscellaneous	18,520
Deaf and Dumb Institutions	2,000
Agriculture	6,000
Department of Works	65,000
Navigation Securities	10,000
Poor's Asylum	2,000
Poor's Asylum (New)	3,000
Public Printing	8,000
Relief	3,000
Road Compensation	500
Roads and Bridges	100,000
Transient Poor	3,400
Steamboats, Packets and Ferries	8,860
Provincial Exhibition	3,000
New Provincial Building	41,000
Total	$563,880

ESTIMATED INCOME.

Assets 1st January, 1868:—		
Balance in hand of Treasurer	$39,700 50	
Education	22,835 77	
Immigration	1,000 00	
Arrears	119,509 29	
		$183,135 58
Probable Revenue for 1868:—		
Department of Mines	$90,000 00	
Hospital for Insane	20,000 00	
Crown Lands	22,000 00	
Balance of Subsidy	235,953 18	
		$367,953 18
Total		$551,088 76
Estimated Expenditure for 1868		$563,880 00
Income for 1868		551,088 76
Probable Deficit		$12,791 24

Taking for granted that this estimate is fair, we really cannot see where the proposed $50,000 secret service money is to come from. It is not likely that a loan for bringing about a dissolution of the Confederation could be floated in London.

THE NORTH WEST.

It is announced that the Privy Council at Ottawa have appointed the Hon. Messrs. McDougall and Cartier, as a delegation to England in the matter of the ownership of the vast tract of country known as the North West Territory. That huge monopoly, the Hudson's Bay Company, is determined to fight stoutly for its preserves, and its influence, both in and out of Parliament, is anything but despicable. Its position is favorable for defensive purposes, not only length of possession but also present occupation and enjoyment being a formidable weapon against the party compelled to attack. The maxim, *nullum tempus occurrit regi* may be perfectly sound but as between Canada, claimant and the Hudson's Bay Company, tenant, it will not be accepted as conclusive. A considerable number of influential Englishmen have a direct pecuniary interest in sustaining the Company's claims, and we may rest assured that no stone will be left unturned by them to secure the best possible bargain for the interest they represent. The situation is undoubtedly understood and appreciated by our Government, and those delegated to sustain our cause before the Imperial Government will, we are confident, do well whatever can be done to prevent advantage being taken of our expressed intention and manifest willingness to become purchasers. Although the matter is of great importance to the Dominion, it is of special interest to the Province of Ontario, and should Mr. McDougall and his colleagues succeed in their mission, they will have earned for themselves the gratitude of every western Canadian. The fact is, we must annex the North West. Between Lake Superior and the Red River settlement, the country is in a state of nature, but a line of communication is projected, which, when completed, will render the country accessible. The trade of the North West Territories may be drawn to Canada. The people of Red River at present purchase their goods in St. Paul, and take them thence full six hundred miles overland to the settlement, and the cost of freight is from four and a half to five dollars per 100 lbs. Mr. Dawson, whose report has been published, is confident that if communication with Canada were opened, the cost of transport from Lake Superior to Red River would not exceed $1.75 per 100 lbs. It is estimated that even now a trade amounting to several millions of dollars annually, would be transferred to Canada. The state of Minesota is doing a good deal to facilitate intercourse with the settlement, and it becomes our authorities to be up and doing before our opportunity has gone by.

SUGAR DUTIES.

As mentioned in our issue of last week, a conference of the four contracting powers to what is known as the Drawback Convention—England, France, Holland and Belgium—has been held at The Hague. No account of the proceedings has yet appeared. The discus-

sion was, according to the Paris *Moniteur*, in reference to Article 13, which had the effect of protecting the French refiners as against the refiners of the other countries named, to the extent of 2 shillings per cwt. This article has been so remoddled as to remove this anomaly. It is not thought that this change will benefit the English refiners, as English refines are not saleable in France, they being, according to the *Produce Markets Review*, made with a large crystal, to chop well and look brilliant, whereas French sugar is sawn into squares, and to prevnet waste, is made with as small a grain as possible. Instead of being benefitted, the journal just quoted thinks that the change in the terms of the Convention will operate to the detriment of the English refiners, inasmuch as it will strengthen the hands of their Dutch and Belgian competitors. It is complained, too, that the French refiners adopt in practice only two rates of duty on raw sugar, while by the terms of the Convention they should have a graduated scale of four duties, thus giving them a great advantage, by enabling them to use as rich a sugar as possible. An understanding has been arrived at with France to do away with the bounty of five francs on the import of French Colonial sugar, and also the bounty on the import in French ships. It is not known whether a bounty of four per cent. on the import of Java sugar into Holland, which has been hitherto paid, has been stopped, but this is regarded by the English refiners as a flagrant violation of the principle of the treaty.

The *Produce Markets Review* concludes an article on the subject in the following words: —"For ourselves, we have all along regarded the Drawback Convention as a piece of waste paper, fit only for the rubbish shelves of Downing Street. The system of buying by analysis, by which, as we have shown elsewhere, the French refiners can obtain a bounty of 8d. to 1s. per cwt., has for ever destroyed all systems founded on color, and this bounty is in no way affected by the changes made at Hague. We are of opinion that nothing can keep foreign sugar out of England except an even duty, which would force our refiners to work from fine sugar, and to separate entirely the manufacture of Pieces and Loaves."

WOODEN RAILWAYS.

Notice has been given that application will be made at the next session of Parliament for a charter to construct a wooden Railway from North Douro, County of Peterboro, to Haliburton, one of the townships owned by the Canadian Land and Emigration Company. It is expected that the Port Hope and Peterboro' Railway will be extended to North Douro, and that a conjunction of the lines will be formed there.

Communications.

MADOC GOLD DISTRICT.

(From our own Correspondent).

Belleville, Sept. 21st. 1868.

As I hinted in my last week's letter I went on Tuesday to inspect the quartz vein newly discovered on lot 30, in the sixth concession of Madoc, a specimen said to be taken from which yielded the handsome assay rate of $378.00 to the ton; and as it is nearly typical of those lately found in the district, I shall give a somewhat detailed account of what I observed.

The place where it is opened is about three quarters of a mile from the village of Bannockburn in a northeasterly direction. The vein runs along the gently sloping side of a small valley where a clearing of a few acres in extent has been made, and has only about a foot of loose earth on the top. The lode consists of a vein of massive quartz of a porcelain like appearance, with a rather greasy thin glassy fracture, and running in the direction of N. 30° E. by compass. It is enclosed by two well-defined wall rocks, that on the west side being of mica-schist, dipping at an angle of about 87 degrees to the west, while that on the east is of a soft talc-schist, dipping towards the east with an inclination of about 80 degrees, so that the vein appears to widen as it goes downwards at an angle of perhaps 12 degrees. Besides gold, the vein-stone contains a few scattered crystals of iron sulphurets, scales and plates of titanic iron, and a distinct, though interrupted vein of galena (sulphide of lead) runs along the middle part, with an average thickness of about half an inch. It has only been exposed for some ten feet along the lead, but has been traced across nearly the whole of lot No. 29, and for some 50 rods on lot No. 30, where it enters the side of a piece of rising ground under the cover of the woods, where the discoverer ceased to follow it any further.

On arriving at the spot, my first care was to ascertain whether I could discern any gold *in situ;* and I succeeded in fishing up from the bottom of the hole, which is about two feet deep, and then contained a few inches of water from the late rains, a few fragments of quartz containing shews of gold. I then chipped off a few pieces from the solid quartz of the vein, and found the precious metal in some of them, which satisfied me of the genuineness of the discovery, and of the good faith of the fortunate finder.

On leaving, I brought away a quantity of quartz with me, and since my return, I have made an assay of 5 lbs., selecting such rock as did not show any gold on the surface of the pieces. From this I obtained by simple amalgamation a return of gold at the rate of $13.64 per ton.

It is the opinion of some of the practical men who are prospecting in that neighborhood, that this is an extension of some of the gold-bearing veins lately found in the township of Marmora, to which I alluded in my last letter, and indeed, the magnetic bearing being nearly the same, and the quartz closely agreeing with the Marmora type, even to the presence of the galena, which occurs in some of the Marmora veins in a disseminated form, that I scarcely wonder at their drawing the inference, though I had rather not express an opinion as to its correctness.

The chattel sale at the Richardson mine took place on Tuesday, 15th inst. The ore on hand, 100 tons, was sold at 50 cents per ton. The furniture of the agent's house and other movables were bought in on behalf of the Company.

On my way I visited the mill of the Anglo-Saxon Company. It consists of a Blake crusher to prepare the ore for the stamps, which are 30 in number, divided into three batteries of ten stamps each, to each battery is a grinding pan of some seven feet in diameter, and a row of ten Wyckoff cylinders, 30 in all, the batteries are so arranged as to work independently of each other. When I was there, the only parts in motion were the breaker and one row of oscillating cylinders. The whole of the machinery is of the most massive description, and has been got up without regard to expense; but it does not meet the approbation of the California men, who do not approve of the Wyckoff system of amalgamating, preferring the pans throughout.

The mill of the Toronto and Whitby Company is being erected close to the village of Bannockburn. Mr. March, their very gentlemanly superintendent, informs me that he expects to have it running by Christmas, he is quite sanguine as to the success of the Company's enterprise.

Intelligence has been received from the Severn Mill in the eleventh concession of Marmora, which has been working on rock from the Feigel mine. 32 tons have been put through, and the return is stated at $608 in gold, or at the rate of $19 per ton. I hear, however, that a chancery suit has been entered, and an injuction issued to prevent the present holders to take any more quartz from the mine till the question of title shall have been determined.

THE ENGLISH TELEGRAPH ACT.

The statute to enable the Postmaster-General of England to acquire, work, and maintain electric telegraphs is an important measure, and of which the following is a summary: In 24 sections the preamble affirms that the means of communication within the United Kingdom are insufficient and that many districts are without; that it would be attended with great advantage to the State, as well as to merchants and traders, and to the public generally, if a cheaper, more widely extended, and more expeditious system of telegraphy were established, and to that end the Postmaster-General is empowered to work telegraphs in connection with the Post-office. The uniform rate, subject to regulation, of messages throughout the United Kingdom, and without regard to distance, is to be at a rate not exceeding 1s. for the first 20 words, and not exceeding 3d. for each additional five words or part of five words. The Postmaster-General is now authorised, with the consent of the Treasury "out of any moneys which may be from time to time appropriated by act of Parliament, and put at his disposal for that purpose, to purchase the whole or such parts as he shall think fit of the undertaking of any Company." Telegraph Companies are empowered to sell their undertakings under certain conditions specified, with a provision as to the appointment of their servants by the Government, or compensation by way of annuity. The Postmaster-General is to enter into contracts with certain Railway Companies mentioned in the act, and very specific directions are given as to such acquisition, to transmit all messages of the Railway Company in any way relating to the business of the Company in the United Kingdom free of charge. All matters of difference between the Postmaster-General and Railway Companies are to be settled by arbitration. The sum to be received by Reuter's Telegraph Company is to be applied in the first instance to the payment of the debts and liabilities of the Company. There are provisions in the statute to enable the Postmaster to acquire the right of way over canals. Special agreements may be made with newspaper proprietors and with the occupiers of news-rooms, clubs or exchange rooms, to transmit messages at a rate not exceeding 1s. for every 100 words between 8 a.m. and 6 p.m., and special use of a wire to be obtained under regulations, without undue priority or preference; messages having priority are to be specially marked, and all messages are to be paid by means of stamps, which are to be kept for sale to the public at offices under the control of the Postmaster-General, to be appointed for that purpose. It is a misdemeanor in any person having official duties to disclose or to intercept messages. Copies of all contracts and agreements made under the act are to be laid before Parliament. In a schedule annexed to the act, thirteen agreements with Railways and Telegraph Companies are re-

, subject to the approbation of Parliament, declares it to be expedient that agreements l be made with other railways set forth, in- g the metropolitan districts. Three months' is to be given by the Postmaster-General Companies. The Postmaster-General, with onsent of the Treasury, can purchase the takings of Telegraph Companies, but no ase or agreement to purchase is to be binding the same has been laid for one month on ble of both Houses of Parliament without roval. The last enactment is that if no act passed in the recent or next session of Parlia- putting at the disposal of the Postmaster- al sueh moneys as may be requisite for car- out the act, then the agreements made to id, and the Postmaster to pay the expenses red.

RETURNS OF THE BANK OF ENGLAND AND OF FRANCE.—The return of the Bank of nd for the week ending September 2nd, the following results, when compared with revious week :—

.....£3,611,437	Increase...£279,950	
e Deposits. 3,274,415	Increase... 295,005	
Deposits...19,577,730	Decrease .. 271,100	

the other side of the account:

vernment Se-	
ities £13,790,131	No change.
Securities. 16,239,930	Increase..£642,852
unemploy'd10,422,450	Decrease.. 239,255

e amount of notes in circulation is £24,307,- being an increase of £351,475 ; and the stock llion in both departments is £20,846,653, ing an increase of £72,552, when compared the preceding return.

e rest in the present return is £3,611,437, would admit of a dividend of 4 per cent., nting to £582,120, and leave the "rest" 29,317. The dividend will probably be de- l at the above rate of 4 per cent. The end last half year was 4 per cent., and in ember, 1867, it was to 4½ per cent.

bjoioined is a comparison of the present posi- of the Bank of England and the price of ols with the corresponding week of last year:

	At present.	Same week last year.
on.....	£20,846,653	£24,072,282
ve	11,539,548	15,009,342
s in circulation...	24,307,105	24,062,940
of discount.....	2 per cent.	2 per cent.
ols..	94	94¾

e weekly return of the Bank of France to the date, shows the following changes (the ex- ge been taken at 25 francs to the pound):

and bullion..... ..	Increase	£176,000
discounted	Decrease.....	1,300,000
s in circulation.....	Increase	752,000
te deposits	Decrease.....	1,160,000
sury balance.....	Decrease.....	1,300,006
nces	Decrease.....	200,000

e farther large falling off in the discount indi- a continuance of stagnation and distrust in rade of France, which is lamentable, seeing continuous additions to the stock of bullion. Bank, by the present addition, holds no less £52,472,000.

NEW COMPANIES INCORPORATED IN NOVA SCOTIA.—Among the bills assented to at the pre- session of the Nova Scotia Legislative Assem- are the following to incorporate:

he Kingston and Sherbrooke Gold Mining pany.
he Ontario Gold Mining Company of Nova cia.
he Canada Gold Mining Company of Nova cia.
he Eureka Gold Mining Company of Nova cia.
he Alpha Gold Mining Company of Mount ucke, Nova Scotia.
The Wentworth Gold Mining Company of Nova Scotia.
The Gladstone Mining Company.
Hayden and Derby Mining Company.
The Uniacke Union Gold Mining Company.
The Imperial Gold Mining Company.
The Prince of Wales Gold Mining Company.
The Orient Gold Mining Company.
The Meridian Gold Mining Company of Nova Scotia.
The Crescent Gold Mining Company of Nova Scotia.
The Delta Gold Mining Company of Nova Scotia.
The Westlake Company.
The Chicago Gold Mining Company of Nova Scotia.
The Montreal Gold Mining Association.
The Scotia Coal Company.
The Stanly Gold Company.
The Royal Gold Company of Nova Scotia.
The North Saint Lawrence and Mount Uniacke Gold Company.
The North American Mining Company.
The Strawberry Hill Gold Mining Company.
The following Companies had their charters amended:
The Block House Mining Company.
The Blue Lead Gold Mining Company.
The Dominion Gold Mining Company.
The Provincial Gold Mining Company.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, 22nd Sept. 1868.

During the past week the town has been very lively, owing to the large influx of strangers from all parts of the Dominion. Hotels and cabs have been driving a large business, but I regret to say actual trade has received but a slight impetus, and we have not witnessed the activity generally expected. The Exhibition has been a success but it has on the whole hardly come up to previous ones. The great value of these Exhibitions consists in this that they are milestones, shewing the progress made in the arts and manufactures of a country and by them we are enabled to compute the rate at which we advance in material civilization. Viewed from this point the exhibition just closed has been in every way most satisfactory and we can congratulate ourselves in having made considerable strides in the last few years. As our papers have recently been filled almost *ad nauseam* with the subject I need write nothing more.

There has been increased liviness in business circles, and the fall trade has fairly set in, great activity cannot be expected till the arrival of the fall fleet, which promises to be unusually late this year. Our harbour looks nearly as deserted as it did in midsummer nor do we expect the usual number of vessels, this is owing to the very bad home freights that ruled during the spring, in fact we had nothing to fill up sailing vessels, the bulk of which had either to go home light or go to Three Rivers or Quebec to load lumber. This entailed so heavy a loss on shipowners that a good many even of the regular traders have been taken off the route. So far it is lucky that the fall fleet is late, as produce is coming forward slowly, but we trust next month to have ample supplies to fill all the vessels that will be here and at rates which will help to make up the spring losses.

OUR PRODUCE MARKET still continues very dull, receipts are light and prices rule too high to enable speculators to operate, the anxious question is not yet solved, is the bottom reached? or how much more will prices recede before that is the case. My opinion is unaltered that the bottom is by no means reached, and that present rates are only maintained by the long purses and tenacity of Western speculators and that as soon as the great volume of the harvest is brought forward further steady decline must be expected ; the large Eastern Markets on this contenent can only take a tithe of the large surplus west, and prices in Europe leave no margin for profit on shipments made at present rates in the West. Flour has scarcely altered in price during the week, super No. 1 ranging from $5.80 to $5.85 for good brands and $6 to $6.10 for strong bakers flour, but the tone of the market is dull and drooping. Wheat is coming forward more freely, but buyers are operating very cautiously, U.C. Spring sells ex cars at $1.30, and Chicago No. 2 Spring has sold by the cargo at $1.28. Corn nominally remains the same as last week 83 to 84c. for mixed, but the sales are not sufficient to form a quotations. In coarse grain there is absolutely nothing doing, farmers expect long prices and operators are unwilling to move till they can see their way somewhat more clearly. In wheat we know that there will be a large surplus, but what the defficiency will be in Peas, Oats, and Barley it is impossible to predict ; the crops of Oats and Peas are certain to be very short, and barley will be a very partial crop, in some districts abundant, but in others small and in all good in color but light in weight.

IN GROCERIES, I have to report greatly increased activity, and next week we expect still further life, as notwithstanding your having rival auction sales to ours, we know that a great many Western buyers will be here. I notice that in your advertising columns you give the list of all our large sales so far as they are announced. Stocks of all staples are not heavy either in town or country and fall importations are generally expected to be light, we may safely anticipate that a large quantity of goods will be placed. Our first cargo sale of fish took place to-day and high prices were realized.

DRY GOODS.—Our importers continue exceedingly busy, but the number of buyers expected down during the exhibition has been much smaller than anticipated; but travelers have brought in more than the usual number of orders and a great many round lots have been placed. Cottons have been very active at full prices, the demand falling chiefly on Prints and fancy goods ; heavy shirtings are slower of sale. Woolens,—All the finer qualities of cloths and tweeds are enquired for, prices range about 20 per cent. less than last fall ; this decline is caused by the fall in wool and the overproduction of most woolens ; the heavier and caurse qualities are dull of sale at very uneven prices. Hosiery generally is in good demand. I am glad to say that for the last ten days there has been a marked improvement in remittances.

Toronto Market.

We are now in the most active part of the fall season, and fortunately the condition of the weather has been highly favorable to business operations. Barley has poured into the City in immense quantities ; the aggregate for the week exceeding in quantity anything within our recollection for years past. On the street market the receipts, which have been very large all week, have fallen off within the last four days, owing chiefly to the absence of many farmers at the Provincial Fair at Hamilton.

DRY GOODS.—The leading houses report an active business in all leading articles. Remittances from country merchants are spoken of as very satisfactory during the week. There is no change in prices.

BOOTS AND SHOES.—There is no abatement of the brisk demand reported last week for seasonable goods. Our houses have more business than they can do. Prices are firm and unchanged.

HATS, CAPS AND FURS.—The trade in raw furs is not yet commenced, as the Ontario game law, passed last Session of Parliament, prohibits trapping till the end of November. This measure is much complaind of by the dealers in furs. For all the purposes of the trade a skin taken off in the end of October is equally good with that taken in November or December. This regulation prevents

the trade opening up at the usual time, and hence prices are nominal and business inactive. There is a great demand for silk hats for the country stores. Some of our manufacturers inform us that they cannot keep the trade supplied much less accumulate a stock of these goods. The late cool weather has stimulated the retail trade, and now a good lively business is reported in all kinds of seasonable goods.

GRAIN.—*Wheat.*—Receipts by cars 1,871 bush., light arrivals on the street. The market has ruled dull, there is very little offered and prices are stationary at the quotations of last week. A lot of 400 bush. spring sold at $1.20 and on the street $1.18 was paid; for midge-proof the street buyers pay $1.20 to $1.22; fall is scarce and firm at $1.30 for car loads, $1.32 was paid on the street for waggon loads. *Barley.*—Receipts by cars for the week 41,058 bush. and on the street 120,000 bush. making a total of 181,058 bush. from all sources. The market has ruled firm and steadily advanced from $1.02 to $1.03 at the opening to $1.09 to $1.10 at the close, the tendency being still upwards. About twenty car loads in all were reported sold during the week at current rates. Some cargo lots also changed hands, but mostly on p. t.; $1.10 was readily obtainable at the end of the week. *Peas.*—Receipts light; car loads are offered at 99c. to $1.00 and there are buyers at 97c., a sale having occurred at that price. On the street there were moderate receipts and prices ranged from 95c. to 96c. *Oats* are steady with a small demand and not many offering, the market closing at 50c. to 52c.; on the street, no sales of car loads reported. *Rye.*—None selling, nominal at about 80c.

FLOUR.—Receipts 1,575 brls. against 1,250 brls. the previous week. The market continues dull and nominal with a downward tendency on superfine; a lot sold early in the week at $5.65 but there are now free sellers at $5.50 and some late sales have occurred but terms are kept private. In extra and superior there were no transactions.

PROVISIONS.—*Butter* continues dull at 17c. to 22c. for tub; no sales of lots reported. *Eggs* are scarce and as high as 17c. was paid for a small quantity. *Cheese* continues scarce and firm, holders asking 11½ to 12c. Dressed hogs sell at $5.00 to 8.50.

LIVE STOCK.—There were a great many transactions in choice animals at the Fair and fancy prices were paid; one large steer brought $400 for this market. Live hogs have sold to a considerable extent at $6.00 per 100 lbs. Beef cattle ordinary sell at $5.00 to $6.00; and sheep at $3.00 to $4.00.

The Cotton Market.

The Charleston *Courier* gives place to the following carefully prepared estimate of the probable supply of cotton for the years 1868-69:

The elements that determine the question of supply are, first the area of land planted in cotton; second, the quantity and efficiency of the labor employed in the culture. The Bureau of Agriculture at Washington, in its report of July 1, 1868, estimates the diminished quantity of land laid down in cotton the present year at ten per cent. This we deem to be below the average, which appears to have been higher. But adopting this estimate with regard to the area of cotton cultivation, the average reduction would be equivalent to 250,000 bales on an assumed supply of 2,250,000 bales. If we suppose the increased production to have been ten per cent. on an assumed basis of 2,250,000 bales, the aggregate product would be 2,250,000 bales.

As regards the other element—the quantity and effectiveness of the labor applied to the culture—comparing this year with the last, it is still more difficult to arrive at a satisfactory conclusion. From all concurrent testimony that there has been an increased and a more effective application of labor to the culture of cotton, comparing this year with the preceding, seems indisputable, from the consciousness of the laborers that they were to derive increased advantages from their self-imposed tasks. This has not only added to the quantity, but contributed to the greater efficiency of labor, subjected to the deduction connected with their presence at elections and political meetings. Against this, again, is to be placed the fact that the land has been less productive than it would have been had fewer fertilizers than usual had not been purchased from the comparative want of the means of purchase by the planters. If we assume as the crop of 1867-68 the figure of 2,250,000 bales, and admit the diminished area of land cultivated in cotton to have been ten per cent. as compared with the previous year, and allow ten per cent for increased productiveness, the crop of 1868-69 may be fairly estimated at 2,250,000 bales. Another mode of estimating the crop would be, supposing the working force to be 500,000 hands, and the average product per hand 4½ bales, we would arrive at the same result—2,250,000 bales.

The question, however, of the probable extent of the crop of 1868-69 does not depend simply on the capacity to grow cotton, but on the combined power to grow and gather in the produce of that and every other crop. The extent of land planted in cotton and the ability to pick out the crop after it is made, is the measure of that power. We do not think that the physical ability exists to produce a larger crop than 2,500,000 bales with our present working force.

As regards the other sources of supply, the probable conclusion is that they have reached their maximum, under the present state of prices. The imports of raw cotton into England from the East Indies, Egypt and Brazil increased in 1868 only 8,000 bales as compared with 1867, while the average deliveries for consumption increased to 171,000 bales. If, under a moderate stimulus to prices, and such an increased consumption, the imports had augmented only 8,000 bales, the probable inference is that a maximum of increase in the supply from these sources had been obtained. A Liverpool circular of the 1st of August, from the house of Edwards, Smith & Co., states that "from India the exports are very trifling, say 46,000 bales from Bombay to all Europe in the first three weeks of July, and from all we can learn we think they will continue small for the remainder of the year." What strengthens this conclusion is the fact that both in the East Indies and Egypt the necessity of greater attention to cereals and less to cotton has been made manifest from the increasing tendency to famines in those countries.

The same journal, after discussing also the questions of consumption and future prices, arrives at the following conclusions:—

1. That the American supply will be at least equal to that of the year just closed.

2. That the foreign supply under prevailing prices has reached its maximum.

3. That the consumption will, in all probability, be increased from 10 to 15 per cent. during the present year, should there be continued peace in Europe, but that it is checked when middling uplands exceed 10d.

4. That the price of this description will, after some fluctuation, settle at about 10d., as affording remuneration both to the manufacturer and the planter.

To Resume.

The Maitland Distillery will soon be in operation again, the necessary preparations for running being nearly completed. The name of the new firm is Fletcher, Hoag & Co. Mr. Halliday will take a leading part in its management.

Changed Hands.

The Factory of Messrs. Edward Miall & Co., Oshawa, has resumed work under the control and ownership of Messrs. Gibbs & Bro. of that place. Important additions and improvements are contemplated.

What Is Petroleum?

Professor Hitchcock, of New York, states t petroleum is unquestionably of organic origin. his opinion, the great mass of it has been deri from plants; it has been thought by some to derived from the animal kingdom, being cit a fish oil or a substance related to adipocre. does not appear to be the result of a natural tillation of coal, since its chemical composition different from the oil manufactured from the c nels, containing neither aniline nor nitrobenz. Moreover, petroleum occupied fissures in the urian and Devonian strata of America long be the trees of the coal period were growing in t native forests. Brine is generally associated w petroleum, and the fact of the slight solubilit hydrocarbon in fresh water, but insolubility salt water, excites the inquiry whether salt w of primæval lagoons may not have prevented escape of the vegetable gases beneath, and condensed them into liquid. The immense terri in North America, several hundred square m in extent, underlaid by certain geological for tions in an unaltered state, implies that the pe leum of the New World, like its coal, is prob inexhaustible. In a paper by Professor Hi cock, read before the British Association in 1 he states that in five years the United Stat America produced more than 300,000,000 gal of petroleum. The average daily yield in the 1866 was at least 12,000 barrels. The busi of collecting, transporting, and refining it ployed as many hands as either the coal or trade. The most prolific of all the petrol regions is Western Pennsylvania. The oil is f beneath each of three sandstones, or sets of in vious strata. Petroleum may occur in cav and fissures in the strata. The existence cavity is inferred from the prodigious amou fluid spouting out of the ground; at the C well at Pitt Hole the produce was at the ra 1800 barrels of petroleum per day. There a less than fourteen different formations in N America from which petroleum has been obtai

English Tea Market.

The arrival of the first of the clippers with season's Tea was looked for some time next w but the trade was rather surprised on Tue with the announcement that the *Ariel* was i Channel and would be in dock the following on which day (September 2) the *Spendthrift* reported, the two having run the distance w an hour or two, making the swiftest passag record for sailing ships. The steamers *Ac* and *Agamemnon* were fully expected to a first, although they were two or three weeks starting, but the *Agamemnon* only turned u the 3rd, and the *Achilles* has not yet put appearance. The *Sir Lancelot, Tueping* and *I Will* followed, and to-day (Friday) the *Lah* signalled off the Lizard. The samples have freely put out, and sales have been made moderate extent, according to quality, at 1 to 2s. 5d. for Kaisow, 1s. 11d. to 2s. 1d. for chests and 2s. 5d. to 2s. 9d. for boxes Pak The reports received from China regarding generally inferior quality are fully borne out, being very little, so far, that can be called The medium and finer sorts are badly made, mixed in leaf and dusty, having all the appea of old leaves being thrown in with the new At the public sales held on the 1st and 2nd several large parcels of new season's scented O Pekoe, brought overland, were put up "wi reserve." They were quite unsuited for the ket, being hastily prepared and thin, and very little favor with buyers, the prices ra from 1s. 2½d. to 1s. 5½d. per lb., which must a heavy loss, as the expenses of transit ove are necessarily exceptional. Some scented C sold privately at fair rates, being more in r and better prepared than the Pekoes. A same sales common Congou went about ½ lb. easier than at the sales a fortnight previ other descriptions unchanged. Fine Greens wanted.—*Grocer, Sept. 6.*

Ship Building at St. John.

he decline in the ship building business has
ted the commercial prosperity of St. John,
destroyed the hopes of those citizens who ex-
cd to see this one of the most thriving cities
the American seaboard. Some of our most
ve shipbuilders have manfully struggled against
adverse circumstances which have come up
nd them like a rising tide, hoping by brave
ividual effort to overcome these circumstances.
ly have turned their attention to the construc-
of spruce ships, they have built vessels to be
d on their own account, and they have sought
very means to avert the evil days that gathered
upon them. But their success has not been
mensurate with their labors, with their enter-
e, with their capital or skill. The same amount
these invested in other ways, or in other
ntries, would have yielded far more generous
rns. As a last resource they will probably try
posite ships, concerning which much has
dy been written. The manufacture of these
els requires very heavy capital; a capital so
y as to tax the resources of the individual
der far beyond his strength, and, indeed, to
vily tax the resources of any combination of
ders that might be made. The general
perity of the Province depends so largely upon
building, and the decline of this branch of
stry being so general, the people seem to be
e willing that out of the Provincial funds aid
ld be granted to those willing to try to keep
e this important industry, in the shape of
nties to composite ships built here. Although
Legislature has not yet responded to what ap-
s to be the general wish, we think it cannot
se to do so at its next session.

Demerara Sugar Market.

he following is from Sandbach, Parker & Co's.
ular dated Aug. 24.

UGAR.—About 2,000 hhds. have been sold
ng the month; Muscovados are neglected, and
quantity offering very small; for Vacuum Pan
demand is good, but buyers are not inclined
ay the high prices lately ruling, the rates at
ch sales have been made during the fortnight
still better than the English quotations; about
1st of September the bulk of the Estates will
t work and a large quantity will be offering
sale, when the capacity of the American market
our manufacture will be fully tested.

OLASSES.—The demand has been small and
low rates ruling in New York have for the
ent almost put a stop to shipments of any but
very finest qualities.

UM.—About 50 puncheons were offered for
during the fortnight and sold for Halifax.

Halifax Market.

BREADSTUFFS.—Flour—stocks light, with fair
hand at slightly lower prices; Canada No. 1
75 to $7.90; Extra $8.30 to $8.40; Extra State
1 at $7.70 to $7.80; Baltimore Super. $7.00 to
25; Extra $7.75 to $8.00; Rye dull. Corn
l dull at $4.60 to $4.70 for kiln dried; $4.40
$4.50 for fresh ground. Oatmeal dull at $7.75
$7.85. Imports from January 1st to September
h, 1867 and 1868:

	Brls. Flour.	Brls. Cornmeal.
1868	125,389	40,381
1867	120,576	29,533

WEST INDIA PRODUCE.—Sugars dull, and prices
nominal at our quotations; sales made of a
go of good grocery Cuba at 5⅞c. in bond, and
of common Cuba at 5½c. in bond. Molasses
ri and in good demand at 29½c. to 30c. for
Cnfuegos in bond. Rum—Demerara 52c. to
.; St. Jago 43c. in bond.

FINANCIAL.—Bank drawing rate on London 60
sight bills 13 per cent. premium; Private 12
12½ per cent. premium. New York Gold drafts
sight, 4 per cent. premium. Currency drafts
2 per cent. discount. Montreal sight drafts 4 per
t. premium. Newfoundland sight drafts 5 per
t. premium.—*R. C. Hamilton & Co's. Circular.*

NEW INSOLVENTS.—Hiram Albert Grannis, Hillier; Anna S. Miller, Hamilton; James Persullivan and David Wells, Barrie; John J. Shany, Caro, Three Rivers; Emernie Couvrette, Montreal; Thomas Goffatt, Jr., Barrie; R. Collins & Sons, St. John; Henry Parsons, Montreal; A. Zariesbeer, Bowmanville; David Huston, Maryboro; John Ainlay, Hope.

INSOLVENTS.—The following Insolvents were gazetted on the 19th:—P. Sinclair & Son, Quebec; Archibald McLean, Pendleton; A. S. Hart, Three Rivers; David Parish, Port Stanley; Benjamin Connor, Orangeville; Jas. Connor, Peterboro'; Jno. Hamson, do; Hy. Spencer, Hamilton; Jno. Ferguson, Buckingham; Andrew Cowen, Ottawa; Robert Hammond, Amaranth; Jas. Russ, St. Catharines; Wm. Johnson, Montreal; Charles Crawford, Thorold; Jno. Farquharson, Whitby; Jno. McMahon, do; Jno. Herd, Biddulph.

GODERICH SALT.—During the month of August 3,500 bbls. of salt were shipped from Goderich by lake. The *Signal* says this amount would have been larger had there been salt to supply the demand.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Montreal House, Montreal, Canada.

TO MONETARY MEN.—Merchants, Insurance Agents, Lawyers, Bankers, Railway and Steamboat Travellers, Mining Agents, Directors and Stockholders of Public Companies, and other persons visiting Montreal for business or pleasure, are here by most respectfully informed that the undersigned proposes to furnish the best hotel accommodation at the most reasonable charges. It is our study to provide every comfort and accommodation to all our guests, especially for gentlemen engaged as above. To those who have been accustomed to patronize other first-class hotels, we only ask a trial; we have the same accommodation and our table is furnished with every delicacy of the season.

H. DUCLOS.

Extract [of] Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News* : and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company :—

"*To whom it may concern*:..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodhow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in tact for Policy-holder's heirs, or other purposes.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country, has been steadily prospering. The *Massachusetts Insu Reports* show that in nearly all important matters superior to the general average of Companies. It offe intending assurers the following reasons, amongst ot for preferring it to other companies:

It is purely Mutual It allows the Insured to t and reside in any portion of the United States and Eu It throws out almost all restriction on occupation fro Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note all cash company. Its Dividends are declared ann and applied in reduction of Premium. Its Dividend in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. Ir settlement of Policies, a Dividend will be allowed for year the policy has been in force. The number of dends will always equal the outstanding Notes. It pa losses promptly—during its existence never having tested a claim. It Issues Policies for the benefit of ried Women beyond the reach of their husband's credi Creditors may also insure the lives of Debtors. Its Po are all *Non-forfeiting*, as it always allows the assure surrender his Policy, should he desire, the Company ing a paid-up Policy therefor. This important fe will commend itself to all. The inducements now ot by the PHŒNIX are better and more liberal than the any other Company. Its rate of Mortality is exceed low and under the average.

Parties contemplating *Life Insurance* will find it to interest to call and examine our system. Policies is payable either in *Gold* or American currency.

Mining.

MADOC GOLD DISTRICT.

Some interesting details respecting mining matters, are afforded in the following correspondence which, coming from a thoroughly reliable source, we take pleasure in publishing :—

Belleville, Ont., Sept., 25, 1868.

DEAR SIR,—According to your request, I visited, on Wednesday, 16th inst., the Quartz-lead discovered by D. B. Johnstou, on Lot No. 30, in the sixth concession of the township of Madoc, and now beg to hand you the result of my observations.

Leaving the waggon at the village of Banuockburn, we followed a bye-road leading through the woods in a north-easterly direction, for about three-fourths of a mile, which brought us to the place where the vein had been exposed, a few yards within the boundary of the lot.

The lode runs along the gently sloping side of a little valley, where a clearing of a few acres in extent has been made, across which it has been traced for about 40 rods, to where it enters the base of a piece of rising ground covered with thick woods, beyond which it has not been followed ; the bearing by compass being N. 30 E.

The lode consists of a distinct vein of semi-opaque crystalline quartz of a whitish color, and possessing a rather oleaginous than glassy lustre on the surface of fracture. It is about four feet wide, and is enclosed between well defined wall-rocks; that on the west side consisting of mica-schist, dipping to the west with an inclination of about 87 degrees ; and that on the east side of talc-schist, dipping to the east at an angle with the horizon of about 80 degrees, so that the vein appears to widen downwards at an angle of about 12 degrees. The whole is covered with only a few inches of loose soil, which had been removed for a space of 12 feet in length by 7 feet broad.

Having taken notes of these points, I proceeded to search for gold in sitû, and succeeded in bringing up from the bottom of the hole made by blasting, which is nowhere more than two feet deep, and then contained a little water from recent rains, a few pieces of quartz in which gold was plainly discernable. I then broke off from the solid rock of the vein a few fragments which contained visible particles of gold. Some of the larger pieces which lay about, apparently just as thrown out by the explosion, also showed gold on their surfaces.

I also observed that the quartz contains a few scattered nodules and scales of titanic and magnetic iron ore, and crystals of common pyrites (bisulphuret of iron), and has an interrupted vein of galena (sulphide of lead), about half an inch in thickness, running along the middle.

On leaving, I selected portions of the clean vein-stone ; of earthy debris, containing fragments of the wall-rocks and surface quartz; of the decomposed quartz forming the cap of the vein ; and of the central part, containing the galena—over 25 lbs. in all ; from which, since my return, I have made the following tests :—

No. 1. Clean vein-stone, shewing no gold to the eye ; 5 lbs. yielded by amalgamation (mill process) 0·82 grains gold = 13 dwts. 16 grs., value $13.64 per ton of 2,000 lbs.

No. 2. Earthy debris, containing fragments of wall rocks and vein-stone ; 5 lbs. gave by mill process, 0·07 grs. gold = 1 dwt. 4 grs. per ton.

No. 3. Ferruginous decomposed quartz from surface of lode : 5 lbs. gave, by mill process, a small quantity of gold.

No. 4. Same as last ; 5 lbs. gave a similar return.

No. 5. Fire assay of sulphurets concentrated from the tailings of the above four assays—425 grains yielded 0·11 grains alloy, containing 0·075 silver, and 0·035 gr. gold =

Silver, 5 oz. 2 dwt. 22 gr. } Value, { $ 6.58 } = $54.58 ₱ ton.
Gold, 2 " 8 " 00 } { 48.00 }

No. 6. Quartz from middle of vein, including galena, &c., 5 lbs. concentrated to 1,116 grains, of which 69 grains was magnetic iron. The 1,116 grains yielded by fire assay, 805 grains lead, or 72·148 per cent. ; which, by cupellation, gave 2·13 grains of silver alloyed with about 1-700th part of gold = 77 ozs. 3 dwts. 11 grs.—value $98.64 per ton.

From the above results I draw the following deductions :—

First—That the discovery is genuine and valuable.

Second—That if properly worked, the vein is likely to prove richly remunerative.

Third—That so far as I can judge from the present limited exposure, the gold appears to be disseminated throughout the whole width of the vein ; but that it occurs chiefly in the immediate vicinity of the wall-rocks, especially on the west side of the lode ; and that the silver accompanies the galena.

Fourth—That the proper mode of working such a vein would be, to separate the portion containing the galena, and work the remainder by pan-amalgamation, saving the sulphurets. The portion containing the galena to be crushed and concentrated, and reduced by smelting along with the sulphurets from the other part of the vein, when the alloy of silver and gold would be obtained by Pattinson's process, and afterwards by solution and precipitation.

I am, dear Sir,
Yours very truly,

JAMES T. BELL,
Practical Mineralogist & Assayer.

W. H. PONTON, ESQ.

NOVA SCOTIA COAL MINES.

The Albion Mines near New Glasgow, cover an area of four square miles, in which several pits have boen bored and mining continued at a depth of 400 feet in all directions. The thickness of the coal seams heretofore mined has been enormous —nearly forty feet ; but of this not more than twelve feet has been of a good quality of coal. At present only two pits are being worked, others having been abandoned, and one, the largest, having taken fire withiu a year, involving the necessity of permitting the river to flow in and submerge it in order to extinguish the flames. At present, however, the company have a new pit 900 feet in depth, where, as they claim, a much

better quality of coal can be obtained, and to work which they have imported heavy machinery from England at an enormous cost, looking forward to a new reciprocity treaty, and consequent increase of business.

The new machinery is certainly wonderful for its massiveness and strength. A walking-beam which I saw is composed of wrought iron, and weighs seventeen tons. The cages for the shaft are made of steel by the Bessmere process, and are models of strength. The building for the engine is of solid masonry, and the engine itself of enormous power and weight. Indeed weight, ponderosity, seems to be the necessary elements of British strength. A railroad extends from the mines to the loading-ground on Pictou Harbor, where vessels can readily come up to get their loading.

The Albion Mines formerly employed as many as 800 to 900 men, but this number is now reduced by the slackness of trade to 300 or 500. The village where the miners live is laid out with some attempt at regularity, but the houses present a poverty-stricken and dilapidated appearance, and want of neatness in their surroundings, painful to the American eye. This Company last year mined about one hundred thousand tons of coal, selling at $2.25 (gold) per ton.

The coal is bituminous, and best suited for gas purposes; much of it is used by the New York and Boston Gas Companies; it makes a very superior coke. Contiguous to the Albion Mines are those of the Acadia Company. This Company is, with one exception (Hugh Allan, Esq., Montreal), made up of New York men. Its officers are as follows: J. W. Clendennin, President and Treasurer; Cambridge Livingstone, Secretary; Jesse Hoyt, General Agent. Directors: J. W. Clendennin, E. S. Sanford, Cyrus W. Field, C. B. Hoffman, Marshall Lefferts, New York, Hugh Allen Montreal. The property was originally purchased by Mr. Cyrus W. Field from a citizen of Pictou for the sum of $52,000 (gold) Mr. Field considered it a good investment, and with his usual liberality divided it among his friends on his return to New York. General Lefferts was the first President of the Company, and Jesse Hoyt, Esq., Superintendent of the Nova Scotia Telegraph Company, General Agent. General Lefferts, however, was unable to give the the time and attention to the enterprise which its importanee required, and resigned about a year since, being succeeded by Mr. Clendennin, who has exhibited great energy and judgment in his management, being ably assisted by Mr. Hoyt, who has the entire local charge, and whose efficient and judicious superintendence will make this one of the richest mines in the country. The first borings brought to light a seam of coal of the same character as at the Albion mines, and probably a portion of the same, in which the coal, though a fair quality, was interseamed with foreign matter, detracting much from its value. But two years since a new seam was discovered, twenty feet in thickness, of the finest quality of rich bituminous coal, the best discovered in the Province; this discovery so enhanced the value of the adjoining property, that a similar area has been sold to the Incereolonial Company for $150,000.

The Territory of the Acadia Company comprises in mining area, four square miles, and in surface and woodland, 1,400 acres; this is held on a lease of 80 years, paying a royalty on coal sold of five per cent. *ad valorem*.

The two collieries at present in operation are the McGregor, having a slope (or inclined entrance shaft) of 700 feet, and a seam of 12 feet; and the Acadia with a slope of 400 feet, and a seam of 20 feet. The Acadia coal crops out absolutely on the surface only a few feet below the grass; the entrance down an inclined plane of 350 feet leads you to transverse passages, one extending 1,600, the other 700 feet, these being again intersected by cross-passages, or galleries of various lengths An air shaft conveys air into the mine, and at the base, in a chamber showing the whole depth of the seam, are two furnaces, kept constantly burning for purification; the effect in the huge, black coal chamber, with its mysterious galleries made more mysterious by the flashing of the furnace fires; the smart pitmen, with their little stars of lamps fastened to their hats; and the general impression that you are in the depths of the earth gives you a curious and not altogether agreeable sensation, which is not improved by your progression through those black and inscrutable galleries, guided by one of the sooty pitmen aforesaid, and lighted by a little tin apology for a lamp with which you are provided. I breathed more freely, in all senses of the word, when I reached the surface of the earth again. The coal is really beautiful; it resembles anthracite in its brilliance, but is soft and easily broken in the hand; as a domestic coal it is better than the Liverpool, and not very inferior to the channel; it burns with a clear, brilliant flame and throws out no flakes, being exceedingly clean to handle.

The price of the coal is $2.25 per ton at the wharf, the same as the Albion, which is far inferior; add duties, premium on gold, and freight, and it costs in Boston about $8.50 per ton; with free trade it could be delivered in New York for $7 per ton, while Liverpool is $14 to $15, and Channel $18 to $20. For steam purposes treatment of iron, and domestic uses this coal is the best in the Province.

The Acadia Company commenced operations in 1866, and its capacity is about one thousand tons per day. A branch railway, 3½ miles long, connects the mines with the Nova Scotia Railway to Halifax and Windsor, and the Company possesses a loading-ground on the harbor of Pictou; so its facilities for transportation are unexcelled. About three hundred men are employed, who earn from $1.50 to $2.50 per day each.

Stores containing all necessary commodities are already in full operation. The new machinery for hauling coal, pumping, &c., is now being erected, having been made at the Novelty Works, New York, and also contrasts with the English work, in its lightness and evident strength, combined with elegance of appearance.

The amount of coal shipped for the present year will be about 75,000 tons, as they are getting out about 300 to 400 tons a day at present.

When it is taken into consideration that the carboniferous system of Nova Scotia occupies a large portion of ten out of the eighteen counties, and that what I have described is merely the workings of eight square miles, and those in their infancy, it will be seen how much room there is for speculation on the Nova Scotia coal trade of the future. As these coal-measures contain iron ores of the richest character, producing bar-iron of a better quality than any manufactory elsewhere in the British Dominions, and steel only equalled by that of the Dannemora mines of Sweden, something may be hereafter looked for in this industry. —*Cor. N. Y. World.*

THE UTILIZATION OF PEAT FOR SMELTING PURPOSES.

The use of peat in the smelting of iron ores has been frequently attempted on many French and German metallurgical works. It has, however, generally proved that, for the most part, insuperable difficulties have stood in the way of attaining the end in view. The chief difficulty to contend with in the use of peat in blast furnaces seems to be the case with which it crumbles into small pieces, thereby choaking up the furnace, and, in the end, rendering it necessary to blow out. We are told of an occasional exception to this, in case of the use of very rich peats—the furnaces, under such circumstances, having given very satisfactory results. We are glad to learn that an attempt is now being made in this country to utilize the peat beds of the Lake Superior region for the purpose of smelting the rich ores of iron so abundant in that locality.

B. M. Peirce, Sr., Metallurgist and Mining Engineer of the French School, is attempting to prove, beyond all question, the adaptability of this kind of fuel to the smelting of ores in furnaces. Should his efforts be crowned with success it will be a fine thing for the Superior region. Bituminous coal from the deposits of Pennsylvania or Ohio would no longer be a matter of necessity. There would, in all probability, be a saving of at least one-half in the cost of fuel. That would, indeed, be an item of no small consideration as it to come to the chances of success, as between two rival metallurgical districts. An allusion was made in our last issue, in the Mining Summary article upon the the Copper District of Eastern Vermont, to the attempt made there, a short time ago, to utilize the peat in the smelting of copper ore. Should the attempt to prepare it, so that it can be used successfully in the iron furnaces of Lake Superior, succeed, we shall consider that all other things being equal, the problem is likely to be solved for the Vermont copper furnaces. We may, then, fairly consider that the experiments now going on are, in point of fact, not for the Lake Superior region alone, but rather for those regions where peat and ore beds are found in close proximity, with, of course, a scarcity of all other kinds of fuel.

We hope soon to learn of the complete success of Mr. Peirce's attempts in the utilization of peat as fuel in the running of blast furnaces.—*Journal of Mining.*

SILVER ORE.—A Chicago paper says:—A magnificent specimen of dog tooth spar was exhibited on 'Change, taken from the Shunian (Silver) Mine of Thunder Bay, on the northern shore of Lake Superior, and presented by Messrs. N. C. Bennett and J. E. Withers, of the Mining Company, to the Chicago University. It is a rarity in spar of beauty, and will, we doubt not, be highly prized by all connected with the institution chosen as the recipient.

—Iron works have been established at Marquette on the southern shore of Lake Superior, which it is expected, will produce pig iron at less cost than is done at Pittsburg.

—Perhaps the best evidence of the permanency of the mines of the precious metals may be found in the fact that, after more than three hundred centuries of operation, more or less active, the silver mines of Mexico remain as her great industrial resource, the basis of her commercial credit, the best security she can offer for the cost of any improvement she may contemplate.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending 11th Sept., 1868.

Passengers	$39,094
Freight and live stock	42,577
Mails and sundries	1,831
	$83,503
Corresponding Week of '67.	83,497

NORTHERN RAILWAY.—Traffic Receipts for week ending Sept. 19, 1868.

Passengers	$2,98
Freight	8,90
Mails and Sundries	28
Total Receipts for week	$12,17
Corresponding week 1867	10,91
Increase	$1,25

—Hon. M. Carling has been chosen President of the Great Western, in the room of T. [illegible] resigned.

RLWAY COMMISSIONERS.—Aquila Walsh, M. P. for Norfolk, has been appointed ad Commissioner for Ontario; C. J. Brydges managing director of the Grand Trunk ay, for Quebec; the Hon. E. B. Chandler, ew Brunswick; and Mr. Meredith, for Nova t. Under the Independence of Parliament tercolonial Railway Acts passed last session, not be necessary for Mr. Walsh to go back constituency for re-election.

S W. G. AND B. RAILWAY.—An exchange The first section of this road was let on the nst., to contractors, at a figure below the te, ($15,500 per mile.) The township of nby which lately withdrew the By-law ng a bonus to the narrow gauge has now uced one to give a bonus of $50,000 to the and B. road.

GRAND TRUNK.—We hear that a satisfactory ement has been come to, during the week, en the Committee, headed by Mr. Ritter and reak, and the Board, by which three or four embers will be introduced into the Board, ding Mr. Ritter and Mr. Creak, to whom the etors are deeply indebted for the exertions rm the management.

Economy in working is to be the order of the future, and this being so, we tell the Pro- rs that in the Grand Trunk they have a much property than most of them think.

Of course, under the circumstances of the ble and fair arrangement made between s. Creak and Ritter's Committee and the there will be no necessity for the formation rand Trunk Proprietor's Association. Agi. will cease, and its expense be avoided.—*ath's Journal.*

RLWAY TRAFFIC.—The railway returns for t show as follows:—The Great Western 17 in 1868 against $270,183 for the same last year; Grand Trunk, $627,713 in 1868 t $600,779; Brockville and Ottawa, $14,- ainst $10,213; St. Lawrence and Ottawa, against $9,518; New Brunswick and Cana- $0,837, against $7,459; European and North can $16,560 against $15,517; Nova Scotia, 8 against $22,006.

ANTIC AND GREAT WESTERN RAILWAY.—eral meeting of the stockholders was held w York on Sept. 21. After James McHenry en voted to the chair and the minutes of evious meeting adopted, a report from the of Directors was read, congratulating the olders on the improved aspect of affairs, that arrangements had been completed the English creditors, which were being ly carried out, and recommending that the olders should ratify the terms of the agree- with the creditors, and should formally ize the issue of seven million (7,000,000) s of second consolidated mortgage bonds, to a similar amount of debentures.

Resolutions carrying these recommendations feet were adopted, and the thanks of the g were voted to the President, the Directors Mr. McHenry for their exertions in behalf Company.

SOLVENTS.—The following new Insolvents gazetted last week:—Louis Roverge, La station; Jas. Christie, Elora; Henry Winter, a; John H. Bartlett, Granby; Calvin Hall, rs; Moise Duquette, Montreal; Pierre Du- Montreal; Thomas J. Jones, St. Mary's; Phillips, Montreal; Prosper Archambault, of St. Vincent de Paul; Anthony and ew Walsh, Montreal; Wm. Hilton & Co., eal; Ephraim Cronk, Aylmer Village Co. Thomas L. Lewis, Innisfil; Charles Can- Plessisville, Somerset; Edward Fawcett, George Wilson, M. D., St. Mary's; W. B. & Co., Montreal; Pierre Beique, Granby; n Adna Bates, Mitchell; Thomas McFaul, ; Octave Brisettes, St. Bridgette; J. B. & Co., Oshawa.

Insurance.

INSURANCE MATTERS IN MONTREAL.

(From a Correspondent.)

MONTREAL, Sept. 30, 1868.

Since my last the incendiary has been actively at work, and we have had three fires, all in stables, in one of which three horses were destroyed. The total loss will be under $800. The city authorities are going to offer a reward of $1000 to detect the authors, but I question if it will be any use. It is a positive fact that from the day our local goveanment appointed two of their *hangers-on* (both briefless barristers, and in every respct most incompetent) we have had nothing but incendiarism. One of the employees of these marshals has been accused of being the author of many of these fires.

If I were to say that the Insurance Agents are becoming alarmed at the existing state of affairs, I might do them an injustice. Owing to the want of honest dealing one with another, and the universal distrust they exhibit towards their confreres, no united action in any way pertaining to their common interests can be expected. Mr. Perry of the "Royal," seems the only person who takes an interest in exposing the existing state of affairs. He is the author of the existing Fire Marshal's bill, an excellent one, if worked by an honest and efficient Fire Marshal. Unfortunately, however, this is not the case, and the number of fires is rapidly increasing, as the following table of fires for the two months the Marshals have been in office, compared with those of previous years, will plainly show.

	1865.	1866.	1867.	1868.
No. of Fires, July	6	11	14	18
" " August	10	12	14	18
Totals	16	23	28	36

Of the 16 fires for the two months of 1865, 13 were accidental and 3 unaccounted for. Of the 23 for same period, 1866, 21 were accounted for and 2 not ascertained. Of the 28 for same period, 1867, 21 were accidental and 7 not known. Of the 36 in same time, 1868, being the two months during which the Fire Marshals have held sway, 24 are known to be acts of wilful incendiarism. During the present month of September, we have already had fourteen fires, eleven of which were purposely set. So much for the operation of our new system of fire marshalship under the Chauveau & Dunkin Government.

FIRE RECORD.—London, Ont.—The boiler of Messrs. M. & E. Anderson, exploded, killing one man, seriously injuring a number of others, and greatly damaging the building.

Wellington Square, Sept. 21.—Stable of Thos. L. White, at Hillbridge, partially consumed; the whole of his extensive premises had a narrow escape; cause supposed to be heated manure.

Black Creek, Sept.—Dwelling-house, barn and outbuildings and live stock of Mr. Roundtree; particulars as to insurance, not given; believed to be incendiary.

The Grist Mill and Distillery belonging to Mr. George Privat, Enniskillen, were totally consumed.

Ainleyville, Sept.—Store and contents of Mr. George R. Ross; very little saved. Loss heavy; partially insured; no satisfactory account of the fire can be given.

Lambeth, Sept.—Barn of S. Reynolds, and contents; insured for $200; loss heavy. The fire is thought to be the work of an incendiary, and the suspected party has left the neighborhood; four valuable horses in the barn were roasted to death.

St. John, Sept. 12.—Premises of Joseph Fairweather, Market Avenue, totally destroyed; loss chiefly covered by insurance.

Richmond, Quebec, Sept. 22.—House and store of Mr. E. F. Miller, with contents; loss about $8,000 partially insured; cause unknown.

Ancaster, September 27.—Hotel of J. Crann, and adjoining building of A. Raymond; total loss about $5,000; Crann was insured for $600; Raymond no insurance.

North Norwich, Township, Ont., Sept. 1.—Barn of M. M. Kiff, and contents; loss heavy; partial insurance.

Port Dalhousie, Sept. 28.—The light-house at this place caught fire, but was saved.

MARINE RECORD.—Port Rowan, Ont., Sept. 23.—The schooner Florida and barque Grace Greenwood went ashore last night on Long Point, near the old cut. The burque was got off this morning. The schooner is hard on, loaded with 19,000 bus. of corn from Chicago to Oswego.

OSWEGO, Sept. 21.—The schooner Resolute, from Belleville, Ont., for this port, with barley, in attempting to enter the harbor last night, struck the west pier, and is going to pieces. Crew saved.

Newcastle, Sep. 28.—The schooner *Ariadne*, of Port Newcastle, went ashore on Saturday, at 11 P. M,, a little to the west of Port Granby. The vessel was loaded with barley, for Oswego, and had just left the harbor, when, owing to the heavy swell, she struck the ground outside. The crew endeavoured to pull her off by the anchor, which dragged, the wind being very high, and blowing from the south. She beached about one hundred and fifty yards west of the pier. There is about three feet water now in the hold. The vessel and cargo are partially insured.

—The Equitable Life Insurance Company has made a deposit with the Government.

—The Ætna Life has adopted the contribution method of distributing surplus applicable only to dividends to policy holders making their payments under new tables of low cash rates.

—Under the English system of granting small government insurances and annuities through the medium of the Post Office, the number of life policies issued at the end of 1867 was 1485, covering £111,437. The success thus far is not considered a justification of the anticipations formed respecting government schemes.

HARTFORD LIVE STOCK CO.—The failure and winding up of the Hartford Live Stock Company is said to be owing to claims amounting to $80,000 which had never been reported to the Directors, and an immense volume of bad risks. Profiting by this failure the Ætna has increased its rates 30 per cent., inaugurated a new system of inspection and reduced the risks to two classes. The liabilities of the Hartford are placed at $180,000, to pay which it has $100,000 in hand and $20,000 other assets.

PREMIUM NOTES.—In discussing the question of assets the Massachusetts Commissioner, in his recent report, says:—The merit of the premium note plan involves two questions: *First*, Is the plan a good one for the insured? and *second*, Is it a safe one for the company? With the first question we have nothing to do here, except so far as it is involved in the second, and shall, therefore find no occasion to say anything upon it.

Are premium notes or loans a safe investment *for the company*, and may they properly be counted among its legitimate or realized assets as against its reserve fund? There is no mystery about the matter because it involves a transaction between a life insurance company and a policy-holder. If John Doe has given his bond to pay a sum of money to Richard Roe, and at the same time holds the note of Richard running to himself, the note of Richard is just as good as legal tender to John, *under certain limitations*. The limitations are these: The amount due on the note must always be less than the liability on the bond, and John Doe must always have his affairs so well in hand that he can take care of all his other debts

without having to resort to Richard's note for that purpose. So long as he can afford to hold the note to pay *pro tanto* this particular bond, he need not trouble himself about the solvency of the maker.

Applying the same sort of common sense to life insurance, we fail to see why policy-holders' notes, *under similar limitations*, are not a perfectly safe investment, and a perfectly good asset *for the purposes of the company*. The amount of the note or loan on any policy must always be less than the unearned premium or self-insurance under the policy, so that whenever and however the policy is terminated, the insured will owe as much as or more to the company than the company can lose by the non-payment of the note. In other words, the balance on each policy as it stands must always be in favor of the company. All of the note companies have, accordingly, in answer to an enquiry directed to this point, distinctly responded that the premium-note or other credit on any policy, with a few exceptional cases, is never allowed to exceed its net present value, Actuaries' four per cent.

It is also evident that a company cannot sell insurance wholly upon credit. It must have a cash working capital ample enough to pay all of its current losses and expenses without resorting to its notes, or, in other words, it must not be under the necessity of using A's notes to discharge its obligations to B. Without attempting to indicate the precise limit beyond which the proportion of premium notes cannot safely go, we exhibit in the table on another page the actual ratio of the premium notes and loans held by each company, including all loans secured by the policy, to its computed premium reserve, and also to its net assets or actual premium reserve. By the latter is meant the gross assets diminished by all liabilities except the computed premium reserve and guaranteed capital.

Probably no one will seriously contend upon this showing, that any company has passed the absolute limit of safety, unless we are to assume that the company is liable to an experience which upsets the fundamental assumption of an average mortality, and this has the absurdity of begging the whole question. No one, certainly, will say that these notes are a barren investment for the company. Bearing interest from the moment the premium is due, there is also no risk, within the limitations indicated, of their non-payment. If the policy-holder expects that he, or his money, is not bound to pay them to the last cent of principal and interest, he simply allows himself to be deluded. It will not be claimed that they are unrealized assets simply because they are unpaid notes. If so, unpaid mortgage notes must be put in the same category.

Damages by Removal.—A writer in the *Monitor* gives some valuable hints on the subject of adjustment when "damages by removal" are claimed. Such claims are often paid in full, the condition as to the amount payable, viz: such proportion as the sum insured bears to the whole value of the goods, being ignored. He says—"The contract is for indemnity against loss and damage by fire. The insurer agrees to give a certain measure of indemnity, on certain clearly defined conditions, for a certain consideration. One of these conditions is, that in case the property insured is exposed to loss or damage by fire, the assured shall use his best endeavors to save and protect the same, and unless he shall do so, he shall not recover at all; but right here the insurer agrees that in condition to the actual loss and damage by fire, he will also *contribute* to the damages on such proportion of the property saved as shall be caused in saving the same. In the absence of this latter clause in the contract, I insist that the insured could not sustain any claim against the insurer for damages caused solely by removal. That would be a risk which the insurer did not assume, as would be indicated by the condition requiring the owner to remove and save the property from burning, if possible, and he agreed to do it. * * * * * * * I am aware of the various notions of agents and others on this point; many supposing that in cases where the building ignites or is totally consumed, or where a portion of the goods insured are burned, the insurer is liable for all loss and damage up to the full sum insured. But there is no reason or authority for such notions. There are no legal adjudications that favor such views, where the condition in question prevails in the contract. The case of Case *vs.* Hartford Fire Ins. Co., in 13 Ill., 376 does not favor the doctrine that the insurer is liable for the whole damages caused by removal under certain circumstances, but simply settles the question whether the assured could recover at all in that particular case, leaving the contract to govern as to the *extent* of such recovery. It was similar to the case of Hillier *vs.* Alleghany County Mutual Ins. Co., in 3 Penn St., 470, in which it was held that, under the circumstances of that case, the insured could not recover at all. But in the case of Wilson *vs.* Peoria M. & F. Ins. Company in 5 Minnesota, the whole subject was deliberately considered, and it was decided, that although one tenement of the building containing the property insured was on fire, and part of the insured stock was burnt, and balance removed, the amount of loss and damage on goods removed, must be borne by insured and insurer in such proportion as the whole value of the property at the time of the loss. The reasoning of the learned judge in this case is so cogent and logical, I cannot better close this article than by commending the full opinion to the careful examination of all who call themselves underwriters or adjusters.

The true rule in such cases may be stated as follows: A stock of merchandize valued at $10,000 is insured for 5,000. A fire occurs, and $7,000 of the goods are removed, but the damage by such removal is $8,000 and $3,000 of the goods are consumed. The loss should be adjusted thus:—

Goods totally consumed or destroyed		$3,000
Underwriters pay for same		3,000
Damage by removal of goods saved, say total value $7,000 00		
damages	800 00	
Underwriter's pay on 2,000 00 being balance of policy, 2–7	228 57	
Owners, on uninsured portion, $5,000, 5–7.	571 43	
		$800
Total claim under the policy		$3,228 57

Law Report.

Eastern Townships Bank *vs.* Humphrey, *et al.*—This case was lately tried in the Queen's Bench, (appeal side), Montreal. Mr. Justice Badgley said, John Humphrey, a trader in business at Barnston, needing money accommodation, applied to the Eastern Townships Bank, at Sherbrook, in May, 1862, for discount for a year for $1,000, and was refused, the Bank not discounting at the time. He afterwards proposed to take United States notes. The Bank having received these notes at par, would not part with them except at the same value. This was agreed to, and for the note of $1,000 he received $982, the discount of $18 being retained for three months' interest, at the legal Provincial Bank interest of 7 per cent., Humphrey to be permitted to renew the note every three months and have it extended over a year. After the transaction had been effected another transaction took place between Mr. Farwell, cashier of the Bank, and Humphrey, by which the latter paid to the former $10 as a commission for working through the arrangements and renewals of liability during the year. This seems to have been a private bargain between them in no way connected with the discounting of the note, etc. * * * * *

Mr. Farwell, in his deposition, says that it a separate transaction, and not a stipulation discount,—*and the evidence shows that his ciation of Humphrey's irregularity and t were abundantly justified.*

Now looking at the transaction as prove can scarcely be termed a discount or a loan, w the meaning of the Bank charter, 18 Vic., 20, sec. 20, which authorizes the Bank to only in gold and silver bullion, bills of exch discounting of promissory notes and negot securities, and in such trade generally as l mately appertains to the business of Banl the 21st section refers to discounts and adv made on commercial paper or securities, an 22nd authorizes the Bank to take discoun promissory notes or other negotiable secu discounted. Discount is in effect lending m bnt in practice money does not pass, but p receive notes of the Bank, which are the equiv of money from their convertibility into m by the issuing Bank. In this sense there to have been really no discounting so far as p the discounted proceeds in money, but a s agreement to take or purchase from the Ba *the discounted note this foreign bank paper* prepayment of the three months' interest. question then turns upon the value of the modity given to him for the proceeds of the and as to the United States notes given, sufficiently established that these very note been taken by the Bank at their par value; t nominally in some cases at a discount of 3 pe such notes were the chief currency at the ship at the time, and passed generally throug country at their par value, and Humphrey specially for such notes and received them a valne and actually disposed of them in pa of his own indebtedness at their par value; seems therefore manifest that they had paid value at the time.

Now usury is the taking a rate of inter yond that allowed by the law, and to tute the usury, there must not only be an to take illegal interest that is a corrupt agr to take it in violation of the law, or by so vice or shift to reserve or to take it. * And though it is said that the notes recei Humphrey were depreciated, it does not that the owner was not entitled to dema require a higher price, namely, their curr value before he consented to part with th * * No disguise was used; the tran was in good faith, and there could be no because the thing loaned was of full valu lender and was so received and used by t rower. * * * Nor is there anything Bank Charter which brings this transactio in a possible contravention of the Char trading illegally beyond what appertain business of banking.

The second ground in support of the usury is the payment of $10.00 as a d shift to increase the rate of interest. This foundation; in fact it formed no part of the al transaction, nor with the original con parties, who were the Bank itself and Hu

Marine Insurance—Unseaworthi In a policy of insurance on a vessel be to plaintiff, insured only against perils one of the conditions was that the defenda not to be liable for loss or damage arisi unseaworthiness. The vessel in questio fifteen minutes after leaving port, began and in some five hours went down. Both and water, it appeared, were at the time calm, and no actively adverse cause cou was assigned for the accident, nor was dence given by plaintiff to rebut the pres which, it was contended, therefore arose, loss was not occasioned by perils of the s

CANADIAN SHIPPING.

An Official Return, just published, furnishes us with statistics respecting the mercantile navy of the Dominion. The figures are not unpleasant to contemplate and, while affording satisfaction to us Canadians, they may possibly give to those outside our boundaries who affect to despise us, some reason to change their opinions.

	Tons.	No. of Men.	Value.	No.
Ontario	66,959	3,192	2,787,800	481
Quebec	155,690	8,548	4,633,945	1,428
New Brunswick	200,777	6,207	5,904,505	826
Nova Scotia	362,917	19,288	10,256,812	3,087
Total	756,343	37,235	$23,583,062	5,822

Were Prince Edward Island and Newfoundland members of our Confederacy, as they undoubtedly will be, we should be able to show such totals as would give the Dominion rank as the third maritime power in the world.

In spite of obstacles thrown wantonly in our path by our enterprising cousins across the lines, our Marine is making some headway, and we have good reason to congratulate ourselves on the fact that the carrying trade which our aforesaid cousins were kind enough to do for us is likely to be efficiently performed by home-made, home-owned and home-manned vessels. But our ship-owners have grounds of complaint which it is the bounden duty of our Government to examine into. A branch of industry so important as our shipping interest which gives employment to so many, in a country where the want of a variety of employment tells fearfully against an increase of population; which represents a value of twenty-three and a-half millions of dollars; and which is capable of immense development to our immediate profit; is one entitled to the greatest consideration and a fostering care. At the least our ship owners are entitled to receive fair play.

Our navigation laws tell against ourselves. On the sea board, a Canadian vessel is not allowed to participate in the American coasting trade while, on the lakes, American vessels enter and leave our ports as freely as Canadian vessels do. On the other hand, a Canadian vessel in an American port is viewed as a safe victim for the most outrageous exactions and annoyances. The American Custom House officials at the lake ports seem to be constantly on the alert to seize upon unfortunate Canadian skippers and the pettiest infraction of their thousand-and-one laws is the signal for an explosion of rapacity and greed. While our laws are interpreted with a foolish liberality, the whole drift of American legislation is antagonistic to our interests and their regulations seem prompted by a malicious desire to keep us back as much as possible. An American vessel cannot purchase so much as a spar in a Canadian port without danger of seizure on her return. A Canadian vessel, when she touches an American port, is charged, in addition to a tonnage due of 30 cents per ton, from 75c. to $1.20 for a clearance and this too, often, when nothing is landed or received, whereas American vessels are permitted to land passengers and freight free of any charge for entry or clearance. American vessels are allowed to carry timber from the Canadian ports to the Quebec market, landing it at Clayton, New York, while Canadian vessels are prohibited from carrying grain from any American to a Canadian port, even if its ultimate destination be an American port. Canadian vessels are not permitted to enter any American inland stream or canal, whereas American vessels and tugs are allowed to enter Canadian canals and rivers. Even a Canadian steamer will not be allowed to go to the American side of the St. Clair river to take in tow an American vessel which has got a permit here nor Customs authorities to carry bricks from our Canadian landing to another. American steamboats are allowed to carry passengers from one Canadian port to another evading the strict requirement of the law by touching at an American port previous to landing those passengers. Americans monopolise the ferries to the manifest disadvantage of Canadians, as they make it necessary for a Canadian ferryboat to enter and clear every time she touches an American landing; whereas American ferryboats are permitted to cross to and fro without any charge or restriction. American citizens are allowed to command Canadian vessels, but no Canadian is permitted to command an American vessel, the same privilege being extended to American engineers on Canadian steamers, but denied to Canadian engineers on American boats unless they become American citizens.

Is this list of grievances long enough or

shall we go on giving chapter and verse for an endless number of annoyances intended to build up the American Marine at the expense of our own? The object the Americans have in view is to prevent Canadian vessels doing any business whatever to or from American ports. They make no secret of their intent. It is for our legislators to say whether we are to yield ourselves willing victims to their schemes. The Province of Ontario has vessels to the value of $2,787,-800 and the Province of Quebec, $4,633,945, engaged in trade for the most part on our lakes and rivers. Is that interest of sufficient magnitude and importance to be worth some little attention from our Government? Surely, the smallest consideration for the present if not a decent respect for the future should prompt us to follow the dictates of ordinary prudence. The progress made by our shipping interests has been achieved in spite of difficulties innumerable and when the appeal is made for fair play by our ship owners our Government should not be slow to recognise their claims and see that they are justly dealt with. Our excessive liberality in this matter towards our neighbors procures us no thanks; on the contrary, it seems but an incentive to renewed exactions and more wily schemes for getting the better of us. We cannot blame the Americans for taking advantage of our folly on this side, nor do we wonder that they put on the screws on the other. Business is business, and if they can dishearten our ship-owners, secure our carrying trade and, at the same time, retain their own, so much the better for them. Our loss is their gain. But we do wonder that our legislators are so indifferent to the country's prosperity as to ignore practical grievances which injure us at present and may do still more injury in the future. Our pride and our interests are alike concerned in this matter, and if we hope to attain that position which every Canadian should desire, we must take such measures as men of ordinary discretion would adopt under the circumstances to relieve our ship owners from unfair rivalry. The remedy lies in our own hands, and we are worse than fools if we delay to apply it. We need appeal to no one outside our boundaries for either sympathy or redress.

MOVEMENT OF GRAIN.

It is now about four weeks since the crop of 1868 began to move in this section, and during that time an amount of business has been done in receiving and shipping grain, which is creditable alike to our facilities for such operations and to the activity and enterprise of our dealers. Barley, so far, has engrossed attention, it being always brought first into market. During the limited time mentioned nearly 600,000 bushels of this cereal alone have been received and about 460,000 exported and sold in a foreign country. Oswego has, as formely been the chief receptacle of all this grain, but Toledo has taken a large share. As to the prices realized nothing could be more satisfactory. They are equal to the figures (then thought fabulous) which were paid during the American war. Forty-eight pounds of barley represent about as much money as sixty pounds of wheat. Realising such prices it is easy to understand that the conversion of 600,000 bushels of barley into more than that number of dollars has had an immense influence on trade in all its branches.

While the barley trade is thus active, the wheat crop has not yet begun to move to any important extent and will not till the barley is got out of the way; besides the price is such as to give the farmer no special inducement to bring it out.

This late movement of the wheat crop has disappointed the anticipations of the Montreal dealers. The *Herald* thus deprecates their loss of trade,—"At a much earlier date we "had anticipated increased buoyancy in the "market for all descriptions of cereals; but "the disappointment which has been and is "continuing to stare us in the face, is assuming a somewhat serious nature, and, we "fear, injuring this port to an extent which "may not be realized until sufficient mischief "is done to destroy the position which Mon-"treal has attained as a receiving point for "grain. If the produce was not in the coun-"try, the cause would be easily explained "away; but when the reverse is the case, and "this is the season at which stuff should be "coming forward freely, it is a difficult pro-"blem to solve. Whatever the causes are, "we hope they are natural ones."

In the United States the new crop of cereals is moving to the shipping ports finely. At the principal five western lake ports there were received from the 1st August to the 19th September, 832,513 barrels of flour against 722,055 brls. last year, showing an increase of nearly one hundred thousand barrels over 1867, and three hundred thousand brls. over 1866. The receipts of grain were three and a half millions larger for the same period—or twenty-five per cent. The shipments from the same ports show a considerable increase also. These facts go to confirm the largest estimates made of the crop. A careful writer puts the total yield of wheat at 200,000,000 bushels, and of corn at 1,000,000,000 bushels —quantities of which it is difficult to have a practical conception. Of the total wheat it is expected that there will be 40,000,000 bushels of an exportable surplus, or abo 30 per cent more than last year; a mr greater quantity of corn will also be shipp than in any previous year.

These facts could not fail to influence pri as they have done, bringing wheat down shillings per quarter in the English mark It may be that this marked decline is e more than the facts would justify; if so th will be a sharp reaction. In any case th is no longer room for doubt that the wor supply of breadstuffs is abundant and cost consumers less than for several previ years.

LEGAL RESPONSIBILITY OF DIRECTORS.

Recently in treating of the responsibil of shareholders, we shewed that indivi shareholders misled by false statements iss by the company, although responsible fo debts, could still set up such fraud as a fence in an action brought by the comp against them for contribution on the amo remaining unpaid upon their liability t company itself. Very often no contribu is required from shareholders of insol companies, but unfortunate individuals themselves a few months after having good faith, bought their shares relying the glowing statements contained in dire reports, possessors of worthless paper. such cases the private fortunes of the d tors guilty of such fraud are responsil make good the amount lost by their decep This responsibility is so lightly thoug that very often boards of management sider themselves justified in puttin favorable an aspect on the affairs of a pany, in the hope that it may contin command public confidence and weathe storm for some time unti something up.

A very valuable judgment was re delivered in England, by Lord Romill Master of the Rolls, containing, beside judgment upon the particular case at very valuable statements of the law reg the responsibilities of directors to shar ers in general. The case was regardi late Herefordshire Bank in process of l ation and was brought by the official li tor appointed under the winding-up law, as yet, not passed by our Legis against directors, and representativ deceased directors, on behalf of the g body of shareholders, to recover ver siderable sums of money under the fol circumstances: The Banking Compan been losing money for several years, l directors, contrary to the charter, had to call a meeting of the shareholde inform them at the time of the condi

company, and had lent money to one of selves without taking further security. e case made by the official liquidator 1st. That the directors had in the rts, &c., of the company, stated the ion of the company too favorably. 2nd. carrying on of the business when in fact the any was practically insolvent. And 3rd. operly sanctioning loans to one of themrs. Upon the first ground, the Court that the action could not be maintained. ridual shareholders who had lost money nsequence of the false statements of the tors, could prove that they had been ved and could consequently recover, but uld not be taken for granted that the al body of shareholders had been so. case, in order to succeed for such a , must stand upon its own merits.

the second ground, his Lordship went into the evidence, which showed that hole of the surplus fund, and one-fourth e capital had been lost, that false reports alance sheets had been published, that had been allowed to stand over unpaid, that the directors had carried on the ess of the bank long after the capital had entirely lost. It was proved that the ging directors were aware of the true on of affairs, and that the other direcwere not so, but it was held that such ance was no excuse and did not avoid egal liability. Directors who assumed ffice were bound to know the position of company, and the ordinary shareholders right to look to them for compensation sses suffered in consequence of their ct of duty. The third ground was also d, and these his Lordship held were hes of trust, for which, during the years they had continued, the directors liable to make good any loss which the any had sustained in consequence, and ortunes of the directors, both of those sed and those surviving, were liable to good the losses which the company had ined by reason of their having failed in duty.

e are sorry to find that the articles which recently appeared in this journal have, me quarters, been erroneously supposed ve been levelled at particular companies. were this the case, no animus on our could either alter the position of a com- or the liabilities of a single director. re far from stating that we consider the statements of law which have recently ared in these pages, either ill-timed or led for. Corporations in Canada are the same as in England, both good and In the case of Insurance Companies existence of the Government deposit is small security for shareholders; but inspection by a Government superintendent and the existence of a simple and comparatively inexpensive winding-up act would save the general body of shareholders from unnecessary loss, and by increasing public confidence put the institutions themselves on a sounder basis and give their shares a better market value.

RED RIVER TRADE.

The opening of this new channel of trade, this spring, and the prospect of greatly enlarged operations with the Red River settlers next year, render it of importance to circulate some facts regarding the extent of the commerce which may be drawn to Ontario from this source, and the facilities that exist for carrying it on.

The entire business of the country east of the mountains has been, until this spring, done by Minnesota and England. The Hudson's Bay Company have been in the habit of annually importing from London in their own vessels from $300,000 to $400,000 worth of goods for the use of the inhabitants of the Red River settlement, and for the supply of the fur trade in the interior—from which fur trade outfit alone, it has been stated, their annual sales have amounted some years to as much as $1,000,000 to $1,500,000. But in addition to the Hudson's Bay Company, there are numerous traders, small and great, who also dabble in this trade, and the main part of their outfits hitherto, has come to hand via the Hudson's Bay route, in a specially chartered vessel, or has been imported from St. Paul, Minnesota, with an occasional sprinkling of goods from New York and Chicago. Of late years the increase of these traders in Red River, combined with the general prosperity of the settlement, its enlargement by natural increase and additions from the outside world —very limited though these latter be—resulted, as a matter of course, in an extension of the imports and exports. In addition to the traffic by the ice-bound regions of Hudson's Bay, thousands of carts have been despatched semi-annually to St. Cloud, (the head of navigation on the Mississippi,) or to St. Paul, loaded with some of the exportable products of the country, furs and hides; and, reloading at the latter towns, have returned to Selkirk with half a ton of goods, or more, on each cart. A portion of the stuff thus brought back to the settlement is usually, English goods, sent out in bond; but, in great part, the loads are purchased in St. Paul, or its rival for this trade, St. Cloud. Groceries, hardware, dry goods, clothing and agricultural implements, form the bulk of the loading—all of which supplies brought the merchants of Minnesota such handsome profits that many years ago they commenced assiduously to cultivate the trade. Through these efforts, seconded by the State Legislature, four horse coaches were run through the wilderness as far as Fort Abercrombie, on the Red River, some 250 miles from St. Paul; a fine steamer was built and placed on the Red River to run from Abercrombie to Fort Garry; and, in addition, a mail went through from St. Paul to Pembina,—on the boundary line—twice a week all the year round. Pembina, we may state, is only some sixty odd miles from Fort Garry. In making these efforts the people and legislature of Minnesota had one grand object in view—an object frequently and openly avowed—and that was the securing the rich and promising trade of the North-West, and the peaceable annexation of that country, if possible. The efforts to keep the route open, and make the trade of that region tributary to Minnesota, worked to a charm. Whether or not the other part of their programme will be carried out, remains to be seen.

Our readers may ask, how was all this accomplished? Easily enough. The Post Office department gave out a contract for carrying the mails, and the company who took it, in conjunction with companies having contracts to Government Forts, and other business in the interior, had to see to it that the roads were in passable trim, and that the rivers were bridged, be the bridging ever so rude. If any of their rough log crossings were swept away, as sometimes happened by a spring freshet, they were replaced by a few hours work; particularly bad spots on any of the roads—and such places are few and far between—were mended, and then, when some heavier work was needed, such as cutting through fifteen or twenty miles of forest, State aid came in to supplement the efforts made by these contractors. Any little balance needed to make travelling more secure, falls to the lot of the several brigades of carts passing to and from Selkirk. The labor and expense divided over so many is continuously and cheerfully performed, and a really good road, some 500 miles long, is kept open between St. Cloud, the present terminus of the North Pacific Railway, and Fort Garry. With the exception of the fifteen or twenty miles nearest the latter post, this highway is so level and in such good order for a road through the wilderness, that any Canadian travelling over it would be astonished. Few of the roads in the vicinity of Toronto, macadamized though they be, are half so good and free from danger to freight and passengers.

While the Red River steamboat was in the hands of the mail contractors, Penbank &

Co., of St. Paul, their charge for forwarding goods from St. Paul was $6 in gold, per 100 lbs. But for the last three years merchants preferred sending for their freight from the settlement, either with their own carts and waggons, horses and oxen, or else hiring such transport in Red River, and in this way their freight from St. Cloud comes to $4 and $5 per 100 lbs. By either of these last-mentioned modes of transit, there is really little or no danger or loss to be apprehended to horses or oxen. Both start together from Fort Garry in long trains, hundreds of carts at a time, make the round trip in from four or five weeks, and come back, with good management as fat, and in as good order as they left. They have the best prairie grass to feed on by the way, abundance of water, and with easy drives of twenty or twenty-five miles a day—an ox cannot safely be driven faster—this tremendous business of going 1000 or 1,200 miles to market, is not very hard on the animals hauling.

A little of this trade, somewhere about $50,000 worth, was done by Canada this spring. Groceries, clothing, hardware, dry goods, and many other lines of business being represented in the Canadian exports to Red River—and all of these goods were brought and landed in the settlement at rates with which the Minesota traders were utterly unable to compete. Before reaching St. Paul they had to be sent over 1000 miles, and yet they were landed in the Apostolic city at rates which defied competition from that quarter. Next season four or five times the above mentioned amount of trade will be done with Canada; but see under what disadvantages we enter into the competition. Taking Mr. Dawson's report, recently issued as a basis of comparison, we find that the probable rate of freight from the head of Lake Superior to the settlement by the projected Canadian route, would not exceed $1,80 to $2 per 100 lbs., and this, even making the most liberal allowance for the expense of transit. But in the absence of any such road, Canadian goods must find their way round through Michigan, Wisconsin and Minnesota, before they even get to a starting point, from whence to Red River the freight will be at least double what it would cost were the Canadian route in use. The entire cost of opening up a route to this country, a channel through which Canada might draw a trade of a couple of millons annually, is estimated by Mr. Dawson to be $166,500, a comparatively insignificant outlay to secure so rich a trade as the North West opens up to us.

Under the circumstances, it is with pleasure we notice the intention of the Dominion Government, as announced by the Commissioner of Public Works, to commence this fall opening that portion of the road between Fort Garry and Lake of the Woods. Though partially adapted as a means of affording work and relief to some of the distressed settlers in Red River—the movement is a bold one—it looks business-like, and it is to be hoped it will not be abandoned until the road to Fort William is fully constructed.

THE INTERCOLONIAL RAILWAY.

The appointment under the Act of last Session, of Mr. Walsh as Railway Commissioner for Ontario, Mr. Brydges for Quebec, and Mr. Chandler for New Brunswick, has created considerable discussion. It is urged that the position of Mr. Brydges as Manager of the Grand Trunk, and his alleged shortcomings in that capacity, should have stood in the way of his receiving an appointment of such importance. As the appointments are made, it is useless to discuss the questions raised on that issue. The office of Commissioner is held during pleasure. The Chief Engineer is to be appointed by the Governor, and act under instructions of the Commissioners. The latter are empowered to employ a secretary, engineers and surveyors, agents and workmen; to cause a survey to be made; and to purchase land and assess damages to property. With respect to tenders and contracts, section 16 provides—"The Commissioners shall build such Railway by tender and contract after the plans and specifications therefor shall have been duly advertised, and they shall accept the tenders of such contractors as shall appear to them to be possessed of sufficient skill, experience and resources to carry on the work or such portions thereof as they may contract for; provided always that the Commissioners shall not be obliged to accept the lowest tender, in case they should deem it for the public interest not to do so; provided also that no contract under this section involving an expense of ten thousand dollars or upwards shall be concluded by the Commissioners until sanctioned by the Governor in Council."

It will be seen, therefore, that the Government will be responsible for the contracts, and that the office of Commissioner is not one in which very great power is centred.

LIVE STOCK INSURANCE.

We know of no reason why a large business should not be done in this province in the insurance of live stock, if the proper exertions be made to make known its advantages. Most of our farmers are, to a greater or less extent, engaged in stock raising, and we cannot see why they should not insure stock as freely and as readily as they do their houses or barns. Valuable animals are constantly imported from abroad; and such accidents as that which occurred recently in Montreal where three horses worth respectively $900 $1,100 and $1,700, were destroyed, shower the importance of effecting an insurance o such property in a live stock company. Dur ing the cattle plague in England, association were formed for insurance against that dis ease, and there are now, we believe, at lea fifteen or sixteen companies in England tha insure cattle. In 1864 a plan was submitte to the British Government for a Nation Live Stock Insurance organization on th compulsory principle, but it was found in practicable. The Ætna Live Stock, who reputation is unquestioned, is the only com pany doing this class of insurance througho the Dominion. We need scarcely add th we hope our farming population, for the own sake, will take advantage of the prote tion it affords.

THE Quebec and Riviere Du Loup secti of the Grand Trunk Railway is ordered be closed forthwith.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

We have to report a very dull week, few tra actions having taken place.

Bank Stock.—There are buyers of Montreal 134½, sellers asking 135½. Ontario would be ta at 98¾; no sellers under 99½; no transacti There are buyers of Toronto at 117; no stock market. Fully paid Royal Canadian offers at and partially paid at 91. There were consider sales of Commerce at 103½ to 104. Gore is off at 46. Buyers offer 105¼ for Merchants', v sellers at 106. 98 would be paid for Que Small sales of City were reported at 102½, bu offer 102 freely. For Du Peuple 105 woul paid; no late sales. There are sellers of Jac Cartier at 108, buyers offering only 106. Se ask 97 for Mechanics' with buyers at 95. O banks nominal.

Debentures.—Canada very scarce; 101 is off for sterling six per cents, 100½ for currency si and 101 for Dominion stock. There were s sales of Toronto at rates to pay about 7 per c interest. County in demand to yield 6¼ per c interest.

Sundries.—Building Society Stock sc Holders ask 120 for Canada Permanent; no s There were sales of Western Canada at 11 113, and in demand. No Freehold in marke is wanted at 106½. Montreal Telegraph hel 135. There were small sales of British Am Assurance at 56. City Gas sold at 105, w rate is freely offered. Considerable sales of ada Landed Credit took place, owing to s holders selling out to avoid the call due o October. Some good mortgages have been p at 8 per cent. Money continues easy on security.

—B. H. LeMoine and Geo. S. Brush have admitted members of the Corporation o Banque du Peuple.

—An interim dividend of five per cent been declared by the Richelieu Company, pa on 5th October.

MONTREAL MONEY MARKET.

(From our own Correspondent).

Montreal, 28th Sept. 1868.

The money market is unusually quiet for this ason of the year; so far there has been scarcely demand on the banks for the movement of gin, the only call being for the purchase of ter, cheese and pork. The imports having en so much short of last year a far less amount been needed for the payment of freights, dies, &c. This amount if therefore thrown on the rket, and seeks short dated investments, thus ing increased ease to the markets. Bank rates ge from 7 to 7½ for first class and 8 to 10. second to third class paper. There is not ch paper offering on the street, and the rate ges from 12½c. to 14 per cent. on warehouse eipts and other securities. Holders of stocks long prices, which restricts business. Bank Montreal is firmly held at 135½; but buyers l not give over 134½. For British 103, and haps a shade over without inducing sellers. y Bank last sales were at 102½. Considerable nsactions in Ontario at 98½, and firmly held at t rate. Bank of Toronto 115. Gore Bank ers at 40, sellers holding for 42½. Fair sales Merchants at 105½. Books of the Richelieu mpany closed, a half yearly dividend of 5 per t. declared payable on the 5th prox. City ssenger railroad 110. New City Gas Co. yers at 125; but holders demand 132½. Gov- ments are strong. Gold here is 142½; silver ying at 3½, selling at 3 to 3¼ dis.; Greenbacks ying at 30, selling at 29¼ to 29½ dis.

HAMILTON DEBENTURES.—The London *Times* the 16th Sept. says :—The corporation of the y of Hamilton, Canada, has forwarded to the y Bank the usual remittance to provide for the upons maturing on the 1st of October, upon ir sterling debentures. The bonds are of two sses, the water works and ordinary, bearing in- est at 4½ and 4 per cent. respectively, increas- ; to 6 per cent.. They were created under the lowing circumstances:—In 1861 the coupons on original 6 per cent. debentutres of the Cor- ation became unpaid, and so remained until 64, when an Act of the Provincial Parliament pitalized the old bonds and the accrued interest reon, and constituted the existing issue. ce this arrangement was made the coupons ve been punctually provided for.

BANK OF ENGLAND.—The half-yearly general rt of the Bank of England was held on the h instant, Thomas Newman Hunt, Esq., the vernor, presiding. The net profits for the half- r ending the 31st of August amount to £584,- 8s. 9d., making the amount of rest on that y £3,610,596 17s. 1d., and after providing a idend of 4 per cent. the rest will stand at £3,- 3,476 17s. 1d. The dividend was declared yable on the 12th of October without deduction income-tax.

CHARTERED BANKS.—A Blue book is out, con- ning returns from the several chartered banks, ting the name and place of residence of each ckholder, with the number and nominal value the shares held by them. It comprises the lowing banks :—British North America; La nque Nationale, Molson's Bank, Gore Bank, Banque Du Peuple, City Bank, Montreal; ebec Bank, Ontario Bank, Commercial Bank of w Brunswick, the People's Bank of New Bruns- ck, Niagara District Bank, St. Catharines; St. phen's Bank, St. Stepheu, N. B.; La Banque ques Cartier, Bank of Montreal, the People's nk of Halifax, Eastern Townships Bank, Mer- nts' Bank of Canada, Bank of Yarmouth, N.S.; nk of Toronto, Royal Canadian Bank, Commer- l bank of Windsor, N. S.

—The Permanent Building Society of the Dis- t of Montreal have declared a dividend, for e half year, of 5 per cent., payable 1st October.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, Sept. 29, 1868.

The weather during the past week has been exceedingly wet and cold; a quantity of rain has fallen which will help to fill up the streams, and must prove a great boon to millers.

PRODUCE.—As I anticipated, the bottom has not yet been reached, and flour during the week declined considerably. Up to Saturday last, the decline was very gradual, but on that day prices gave way considerably, and large sales were made for shipment to the lower ports at $5.50 for supers. At this decline the market is for the present steady; but I should not be astonished to see a further fall, as it can hardly be expected that the English markets will remain at their present point long enough to enable shipments from here to reach them, and thus realize the small profit which they shew now on our present rates of flour and freights. Wheat has followed in the wake of flour, but not to the same extent, the fall being at the outside, 3 cts. per bush.; but prices are purely nominal. U. C. spring being $1.27 to $1.30, and No. 2 Chicago spring $1.26 to $1.28. The market for coarse grains is quiet and unchanged, no wholesale transactions being reported in peas, oats or barley. In provisions, the stock of mess pork is ample, and prices have rather declined; but there is no stock of thin mess, prime mess or prime, which tends to keep up prices. Mess sells at $24.

Large droves of hogs and cattle of all descriptions are being brought rapidly to market, farmers being anxious to dispose of as much as possible of their stock before the winter sets in, as fodder will run very short; the bulk of the cattle, however, are in poor condition, and bring low prices. Good fat cattle would sell rapidly, and at full prices. Dairy produce continues very high; a round lot of Eastern Township butter sold at 24 cts., and a further advance is anticipated. The shipping demand has fallen off, present rates leaving no margin. The steamers for Liverpool take weekly between 1,500 and 2,000 packages of cheese, the price of which is 10½ cts., to 11 cts., for fair to good factory, and 11 cts. to 11¼ for choice.

GROCERIES.—The market is completely unsettled; but the large auction sales this week will have the effect of steadying prices. There have been considerable transactions in fish, oils and teas; the former chiefly for the American market. Messrs. D. Torrence & Co. having disposed of the cargo of the "Annie Braginton," it is of course withdrawn from their catalogue; they will, however, have a good assortment to offer. The sales commenced to-day, Messrs. Rimmer, Gunn & Co.'s being the first. The audience consisted chiefly of city buyers, and the sale generally was a failure, very few goods being placed at low prices. At Victor Hudon's in the afternoon there was an excellent assembly, including a large sprinkling of western buyers. Although the competition was not keen, still there was enough to give animation, and a large quantity of goods were placed. Prices generally ruled low; but not sufficiently so to depress the market. Wines, brandies, and Mediterranean goods constituted the bulk offered. To-morrow, Buchanan, Leckie & Co., offer a large quantity of teas and other groceries; in fact, with the exception of Saturday, we have one or two sales every day.

HARDWARE.—Business has been very brisk; orders from the West being numerous, and several large buyers having come down. The tone of the market has been very firm, and on most qualities of iron an advance of 5 cents per cwt. has been obtained; several sizes of bar and hoop iron have run nearly out of stock, but the fall fleet, part of which is near at hand, will speedily remedy any deficiency. The combination of the cut-nail manufacturers having broken down, the market for them is unsettled, and prices have receded. Stocks are heavy, and holders do not wish to carry over extra quantities during the winter; ordinary brands have sold to a considerable extent at $2.70, and best do. at $2.80 to $2.85. Shelf goods are in good assortment, and sell readily at full rates.

Toronto Market.

The fall trade is making satisfactory progress and promises well. Merchants are generally satisfied with results so far.

DRY GOODS.—A good active business was done during the past week, many houses report sales largely in advance of the same period of last year. There are some complaints of the backwardness of retailers in making payments; but during the week money has come forward more freely, and importers are better satisfied.

HARDWARE.—Trade has improved, and is now fairly active: such changes in prices as have occurred are noted in our Price List.

BOOTS AND SHOES.—Demand active without change in prices.

FANCY GOODS.—Though there has been an important increase of the number of houses engaged in this branch within a year or two, yet they all, so far at least as our enquiries have extended, report a good trade. The best of the season is, however, yet to come, when the assortment, in the wholesale dry goods houses, of many small articles will become broken; dealers will then have to seek the fancy goods stores to sort up. Importations in this branch show an increase on last year.

HOOP SKIRTS.—This trade is actively competed for by not only the principal cities, but the towns have each their manufactories, the product of which comes in competition with the yield of our factories and those of Montreal, as well as the imported also. Prices remain about the same as last fall, but if anything a shade lower. In the early part of the season a tardiness on the part of country merchants in making remittances was complained of, but within the past week there is an improvement in this respect.

GROCERIES.—Business during the last week has been more than ordinarily brisk, many dealers having visited the city and left orders before proceeding to the Provincial Fair at Hamilton. The fall trade is opening up well, and payments are on the whole quite satisfactory. *Sugars*—Are quiet and firm; an advance of ⅛ to ¼ of a cent is quoted in the New York market, and this in face of a decline in gold. The stock in New York is 42,063 boxes, 71,575 hhds., 86,481 Manilla bags, against 65,529 boxes, 50,765 hhds. and 35,281 bags at the same date in 1867. *Molasses*—Are firm; the New York market is quoted 2 to 3c. higher. *Teas*—Steady and unchanged; we note a sale in the New York market of 900 half chests, greens, English orders, shipped to Canada and sold on Canadian account. *Tobacco*—The market for leaf is fairly active at weakening prices.

HOPS.—Our crop is now coming forward freely, but meets with a very slow demand. Holders of good hops would accept 20 cts. gladly owing to the heavy look of the market; so far there have been only retail sales at about that figure. The Wisconsin crop is reported good, and will amount to 18,000 to 20,000 bales, and is a very fine sample. Any lots brought into this market yet are spoken of as generally good.

PETROLEUM.—A meeting of refiners and dealers was held at Hamilton on Tuesday week, and it was agreed to extend the existing combination beyond the first of December, though to what period is not stated. There is a good demand for consumption at steady prices.

LEATHER.—The demand is steady but not so large as might be expected at this season, though next month is expected to be better. There is little variation in prices, but the tendency is upwards.

GRAIN.—*Wheat.*—Receipts 900 bushels, and 1760 bush. last week. In the present dull state of the market farmers have very little inducement to

bring their wheat forward; the demand is limited to the requirements of local mills. It is doubtful even if prices were better that any quantity would be moved, so long as the barley lasts, and is as eagerly songht for and saleable at such long prices as at present. Speculators will not take hold of breadstuffs until they are satisfied that they have touched bottom, which, notwithstanding the greatly reduced prices reached, is still uncertain. It is thought by many that the favorable crops have had an undue influence on prices; that the general anticipation of a decline has led to a much more rapid movement of wheat to market than is usual; that the increased receipts so induced have tended to the belief that the yield was greater than it will shortly prove to be, and that then—say in the latter part of October or in November—will come a reaction. Be this as it may, no one buys just now except on orders or for immediate use, the chances being considered on the side of still lower prices. Spring has settled down to $1.15 and $1.18; midge-proof is worth $1.20.

Barley.—Receipts for the week by rail 38,000 bush. against 41,058 bush. last week; receipts by teams 130,000 bush. and 120,000 bush. for the previous week. This day week the market opened at $1.10 to $1.12, and gradually advanced to $1.20 and $1.21, on the street; but owing to a break in Oswego, fell off to the opening prices of the week; within the last two days an improvement has taken place; the market closing at the quotations in our price list. The total receipt of barley from all sources are estimated at nearly 600,000 bush., and the shipments at 350,000 to 400,000 bush. The following vessels cleared with barley during the six days ending with Saturday last:—The "Australia," with 7,000 bush.; "H. P. Murray," 9,921 bush.; "John A. Macdonald," 9,268 bush., and the "Defiance," 5,839 bush., all for Oswego; the "Cecelia," with 10,000 bush., the "Jessie," 14,000, the "Annie Mulvey," 17,000 bush. the "Eureka," 8,000 bush. and the "Paragon," 11,522 bush. all for Toledo. A careful estimate of the movement from the commencement of the season puts the total receipts at 451,000 bush.; shipments, 287,000; in store, 200,000 bush. The shipments were:—To Oswego, 179,000 bush; to Toledo, 80,000 bush.; to Ogdensburg, 18,000 bush.; to Cleveland, 10,000 bush. *Oats.*—Car loads are arriving in sufficient numbers to supply the local trade, and are selling at 51c to 51½c. *Peas* are dull and nominal; very little of the new crop has been offered in this market yet. *Rye* is selling in small lots at 80 to 85c.

Flour.—Receipts for the week 900 barrels and 1,260 barrels last week. There is a quiet demand on orders for shipment to the Lower Provinces and for local use; but there are more sellers than buyers. No. 1 Superfine has sold during the week at $5.50 to $5.60; at the close there were sellers of ordinary brands at $5.50, while, for favorite, higher figures are demanded. There were some sales of Fancy at $5,85. Superior and Extra nominal, as quoted.

Halifax Market.

Sept. 22.—*Breadstuffs.*—Flour in steady demand, stocks rather heavy; Canada No. 1 $7.40 to $7.50; Extra $8.40 to $8.50; Extra State dull at $7.25 to $7.50; Baltimore Supr. $7.25; Rye in little demand. Corn meal, kiln dried $4.60 to $4.75; fresh ground $4.40 to $4.50. Oatmeal, Canada $7.75 to $7.85. Imports from January 1st to Sept 22nd, 1867 and 1868:

	Brls. Flour.	Brls. Cornmeal.
1868	130,143	40,881
1867	127,624	29,742

West India Produce.—The importation of sugar and molasses having almost entirely ceased for this year's crop, and the New York market having recovered to a large extent, holders of sugars are very firm. The only sales reported are 50 hhds. common grocery Cuba at 5¼c; 70 hhds. fair Barbadoes at 5⅜c in bond for export. We quote Porto Rico 6c to 6⅜; Barbadoes 5⅜ to 6c; Cuba 5¼ to 5½; Centrifugal Cuba 6c in bond.

Financial.—Bank drawing rate on London 60 day sight bills 13 per cent prem.; Private 12 to 12½ per cent prem. New York gold drafts at sight, 4 per cent prem. Currency drafts 27 per cent discount.

Graduated Sugar Duties.

We have had our experience in this country of the difficulty in working a graduated scale of sugar duties. Similar difficulties are met with elsewhere. We take a paragraph bearing on this point from the London *Produce Markets Review* of Sept. 17th:

It has long been remarked as an extraordinary thing, that if part of a cargo of Sugar were sent to the Clyde, and part to London, the Sugar sent to the Clyde was generally assessed at a lower rate of duty to that levied on what was sent to London. As the difference in favor of the Clyde would amount to 1s. 7d. per cwt. on the 8s. duty, and to 11d. on the 9s. 7d. rate, it is somewhat strange that the refiners had never looked into so probable an explanation of the extraordinary cheapness of Sugar on the Clyde, under which London was completely losing the Pieces trade. We understand, however, that the question has now been taken up, and the extraordinary discovery arrived at, that by the system of sampling carried on in London the "foots" are never touched by the "borer;" while on the Clyde, on the contrary, the "footy" part of the hogshead is always included in the samples drawn. Naturally, the Sugar drawn in London would be lighter in color than on the Clyde, and, as a matter of course, if it happened to be near the Duty Standards in color, a Sugar paying 9s. 7d. in London would pay 8s. on the Clyde. The sins of the fathers are certainly visited on the children in this case, for the dishonest system of sampling introduced in London by a former generation of merchants, and maintained up to the present day in spite of the continued protests of the trade, has thus recoiled on the heads of their representatives by driving the trade away from London. The refiners also have paid dearly for supporting the system on the ground that a slight uncertainty in color made no difference to them, while it would make a great difference to grocers, so that the uncertainty of the turn-out of Raw Sugar would force the trade to buy Pieces. We are of opinion not only that a fair mode of sampling should be enforced, but that fairness in this respect should be necessarily inserted among the conditions of sale, and also that no Sugar should be offered for sale without samples being redrawn from the hogsheads not later than a week from the date of contract. We have so often described our present vicious system of sampling that we need not enlarge upon it further, except as a moral to show the absurdity of graduated Sugar duties, for if these were logically carried out, every few inches in a hogshead of Raw Sugar ought to be assessed at a different rate.

Mercantile.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Montreal House, Montreal, Canada.

TO MONETARY MEN.—Merchants, Insurance Agents, Lawyers, Bankers, Railway and Steamboat Travellers, Mining Agents, Directors and Stockholders of Public Companies, and other persons visiting Montreal for business or pleasure, are here by most respectfully informed that the undersigned proposes to furnish the best hotel accommodation at the most reasonable charges. It is our study to provide every comfort and accommodation to all our guests, especially for gentlemen engaged as above. To those who have been accustomed to patronize other first-class hotels, we only ask a trial; we have the same accommodation and our table is furnished with every delicacy of the season.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

ÆTNA

Live Stock Insurance Company.

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,—I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country, and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers intending assurers the following reasons, amongst others for preferring it to other companies:

It is purely Mutual It allows the Insured to travel and reside in any portion of the United States and Europe. It throws out almost all restriction on occupation from its Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and all cash company. Its Dividends are declared annually and applied in reduction of Premium. Its Dividends are in every case on Premiums paid. The Dividends of the PHŒNIX have averaged fifty per cent. yearly. In the settlement of Policies, a Dividend will be allowed for each year the policy has been in force. The number of Dividends will always equal the outstanding Notes. It pays its losses promptly—during its existence never having contested a claim. It issues Policies for the benefit of Married Women beyond the reach of their husband's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting,* as it always allows the assured to surrender his Policy, should he desire, the Company giving a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceedingly low and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

Meetings.

BANK OF ENGLAND.

The half-yearly court of the governor and proprietors of the Bank of England was held on September 17.

The *Governor* said that the directors had carefully gone through the accounts, and he had to report that the net profit for the year ending August 30 amounted to £584,369, making the amount of rest or undivided profits on that day £3,610,596. After providing for a dividend of 4 per cent. for the half-year, the rest would amount to £3,028,476. The court of governors therefore proposed that a half-years dividend be made of 4 per cent., being at the rate of 8 per cent. per annum, and that the dividend be payable on the 10th October next.

The *Governor*, in replying to various questions, put by Mr. Jones and other proprietors, said that the capital of the Bank upon which dividend had to be paid was £14,553,000. All the rest of the property belonging to the Bank were the profits arising out of the Bank's operations, and it was commonly called "rest." The rest was the undivided profits which the court of proprietors long since decided should never be allowed to fall below £3,000,000. The building in which they were assembled occupied rather over three acres of ground, and its value was not included in the capital, but the branch establishments were. With regard to the rate of discount being different on long and and short loans, gentlemen of experience must know that a discount was a short transaction for a short time, and a loan might extend over a series of years, and the rate must be different. In 1856 the discount was 10 per cent., but the Consols were only 2¾; railway debentures, in some cases, were at 5. There were deposits of a permanent character, which the board knew how to deal with, and there were also short deposits, which they might be called upon to pay, and must be prepared to pay, at any moment. As to the Bank not having deposits, he believed the deposits had never been so large as—not, perhaps, at that moment of speaking—but over an average of the last six months. No doubt the country would be benifitted by money being lent to farmers, but it was not the province of this bank to lend it to them. It could only safely be done by the local bankers, and even to them it was a question fraught with grave difficulty. With regard to the rate of discount the explanation was simple. Every one remembered that five or six years ago, that was a period ante to the crisis of 1866, there was a very great extension of credit, but those sudden and excessive extensions of credit were not always wise. The first effect of it was this, that those who embarked in business were suddenly called upon to pay their debts, and to do that they had to withdraw money from the legitimate operations they were engaged in, and that produced a crisis. What took place in 1866 had been miscalled a panic. It was a crisis arising from and following naturally upon too wide an extension of credit, and this crisis out of its convulsions produced panic. Upon 12th May it was a banking panic, who people were seized with unreasoning fear for the safety of their money, and rushed to the banks and withdrew it, in many instances to replace it in the same bank, finding they did not know what to do with it when they had it in their possession. Then came a railway panic, when people thought that railway debentures of all kinds were not worth buying. This was succeeded by a commercial panic, when the trade came almost to a standstill; but, through all, this corporation had steered one steady course. With regard to the rate of discount, it, of course, depended very much upon supply and demand. If there was a large sum of money to lend and a few borrowers, the money must go at a lower rate than if the number of borrowers were greater. Whether the Bank had too much money to lend or too few borrowers, the result was the same. Some said that the Bank might invest upon some other securities, but they forget that the Bank had to pay on demand, and it would be useless to tell a man asking for his money that it had been invested in a safe and snug security.

The report was approved and the dividend declared.

Mining.

NOVA SCOTIA GOLD MINING REVIEW.

Bad weather has slightly interfered with prospecting; but sheltered works have made good progress during the past fortnight. Sales have taken place of properties at Renfrew, Uniacke, and Wine Harbor. Good developed tracts still command high prices. Mining stocks general ly are dull.

SHERBROOK—A critical, but very conscientious, writer—"Wentworth"—reports:—"The original grounds of the Canada Co. are, so far, innocent of gold, but some new purchases have been added, which may turn the scale. The Woodbine Co., under Mr. Brown, are developing their grounds in a very safe and commendable manner. The Wentworth Co. are doing some work and of all the new companies, this looks the brightest, and under proper management will be a success. The Chicago Co. have not advanced their works sufficiently for one to judge of their prospects.

The Meridian Co. will pay at great depth and after much outlay. The Dominion Co. have an excellent property and people wonder that it has not payed a dividend before this. The Metropolitan Co is purely Haligonian. The Palmerston, Hayden & Derby and Wellington take out a great deal of gold. The New York and Sherbrooke property maintains its average yield. The Kingston and Sherbrooke mine has yet a record to make. The Delta and Crescent properties have a good future before them. The Stanley and Red Jacket are still classed as outsiders.

The Union mill is considered the "active principle" here, and justly so. The New York and Sherbrooke Companies and the Hayden mills have seen their best days. The Wellington and Palmerston are in good order and fully at work. The Dominion is now going on: it is much on the same prineiple as the Chicago. The Meridian mill is in want of ore. The Canada mill will soon be completed. Mr. Snow is putting up a 15-stamp water mill. The Wentworth, building by Mr. Wilson, is nearly finished and will be the crack mill of this section of the country.

WINE HARBOUR.—The Eureka mill has been started. Mr. Eschweiler has charge of this, as

also the Provincial and Orient Companies' mines. The Orient mill has been refitted by Mr. E. Leadham with Windsor mortars and cams, and it is now "the Mill of Wine Harbor." The Provincial mill of 8 stamps is working steadily. This company will soon erect a 15-stamp mill with a 60 h.p. engine, and combine pump and hoisting gear under one action. The Eldorado Co. are putting 10 stamps in the old English mill, the original machinery of which has been torn out to make room for them. The steam mill on the Eldorado property is a great success, but through the negligence of a workman some portions of the machinery were injured, and it is now idle pending repairs which have to be done at Boston.

Uniacke.—The reports from this district continue favorable. The mills are all going and we expect to have a large bullion supply in next issue. A lot of 22 tons from Mr. Burkner's wide lode, reduced at the Alpha mill, gave 12 ozs. 11 dwts. The North St. Lawrence Co. report a small but exceedingly rich lode.

Indian Path.—Messrs. Waddelow and Macdonald are working two lodes (one from 6 to 7 ft. the other about 8 inches wide), which show gold freely. This field is likely to prove of great importance.

Ecum Secum.—Mr. F. S. Andrews has favored us with an interesting report of this district, and the works of the Atlantic Co. which he has gone down to manage. The prospects of this district, too, are very bright. Mr. Andrews' report will appear in next issue.

Wagamatcook.—Mr. D. Y. Estey has recently visited this district and speaks encouragingly of the future of this field for placer mining.—*Mining Gazette*

THE SMELTING OF COPPER ORES IN CANADA.

Some facts from trustworthy sources have lately come to our knowledge in regard to the present manufacture of copper from a pyritous ore in the Province of Quebec, about eighty miles distant from the city of that name, upon the Grand Trunk Railway. They are of a very cheering character, and coming to us as they do, at a time when the copper interest generally is in a very depressed condition, we feel inclined to make them the basis of a few editorial lines. They may serve to encourage those who are engaged in similar undertakings, but unfortunately not with the same success. At all events we have good testimony to the effect that even at the present unprecedently low rates of ingot copper in the market it is possible to utilize low grade ores, and that too at a fair rate of profit. The facts as given to us by one of the gentlemen who assisted in inaugurating the enterprise run about as follows:

Through the talcose and chloritic slates of the region of the country alluded to, cuts a vein of copper ore, having an average width of ten feet. The vein yields a low grade pyritous ore, assaying only about four per cent. of copper. The conditions of the vein are, however, such that it can be easily worked, the expense of the mining the ore amounting to some $2.15 per ton in gold. The ores are broken, sorted, and roasted in heaps in the open air, at a cost in gold of seventy-five cents per ton. This work is done by contract; the contractor preparing the fuel necessary, a great abundance of timber being near at hand upon the lands of the company. Thus much for the mining and preparation of the ore for the following process of smelting. This is done upon the works erected near at hand, consisting of four furnaces supplied with a cold air blast, a steam engine furnishing the necessary power. We understand that the furnaces were modelled after those in use upon the works of the Revere Copper Company, at Point Shirley, near Boston, but have since undergone some slight modifications, in order to adapt them more perfectly to the nature of the ore, and to bring out the most practical results. The fuel used for smelting the ore is of the very best. It is imported from New Castle on the Tyne, and costs delivered at the works thirteen dollars in gold per ton. The gangue mass in the vein is of such a nature as to render the use of a flux necessary. We have now to speak of some of the results of the practical working of these furnaces. We confess to no little surprise when our attention was called to them, and are of the opinion that copper men generally are quite as little prepared for them as we were, for, in point of successful copper smelting they really go beyond the precedent. Two furnaces running at the same time, produce nearly five tons of matt per day. Each furnace has a capacity of about twenty-three tons of ore in one day of twenty-four hours. They run, of course, day and night. The consumption of fuel is remarkably light, and the amount of concentration proportionally great. We are informed that every ten tons of ore produce one ton of matt, containing nearly forty per cent of copper. This is as it should be, when we remember that it is a four per cent. ore that is taken from the mine. As we have it in our notes, the average percentage of the matt produced in the last six months amounts to thirty-seven and nine-tenths per cent. The cost per ton of ore all told, for smelting, amounts to the sum of four and a quarter dollars in gold. This copper matt is subjected to no further treatment upon the works, but shipped to Liverpool and there sold in the market at the ruling rates. The cost of shipment, including freight, insurance, commission, etc., amounts to twelve dollars in gold. At the present market rates of copper, the matt sells in the Liverpool market for some $130 in gold per ton. In connection with the manufacture of copper matt, there is one point of peculiar interest that we must not fail to mention, as to it the success of these works is in a great measure due. In the smelting of pyritons copper ores it is generally necessary to blow out at the expiration of a few days, or at the most, in a couple of weeks, and rebuild the interior portions of the furnaces, they having become meanwhile so eaten away and changed in form as to render it impossible to bring about the desired metallurgical results without such reconstruction. But, in this instance, by some slight modifications of the furnaces, together with a certain peculiar management, it has been possible to largely overcome this difficulty. It seems that when the fire brick lining of the furnaces is eaten away, a certain peculiar course of procedure on the part of the smelter causes a new lining to form in place, composed of the slag from the smelted ores. It is certainly a very anomalous course of procedure, but as long as it brings about the required results at the lowest rate of cost, nothing could be better. At the time of our interview with our informant, one furnace had entered upon its tenth week of work, and appeared good for two or three weeks more before it would be necessary to refit. It is evident that for the smelting of this kind of ore, under the above conditions, there has been a great improvement made—an improvement that may, perhaps, be made to serve the interest of others engaged in a similar work. If the price of copper in the market is going to remain at its present low figure, there must be a proportional decrease in the cost of its production, if not, our copper mines will have to remain unworked and our smelting mills stand still. We are only too glad amid the general stagnation that now prevails among the copper industries of the country, to be able to record what we have of an enterprise that has sprung up in our midst during the past year, and by means of a proper application of enterprise and skill been brought to such a good degree of success. We hope to obtain in the future, still further information in regard to the enterprise, that will be of general interest to our readers.—*American Jour. of Mining.*

Geological Survey of Nova Scotia.—We understand that the survey of the Province is being vigorously prosecuted. Sir W. E. Logan has been for some time at New Glasgow with his assistant, Mr. Hartley, making researches in the numerous coal mines of that vicinity. Dr. Dawson, we believe, has also been observing in the same district, as well as at Mount Uniacke and in Cape Breton. Professor How has been engaged during the summer in Digby and Annapolis Counties, and has forwarded large collections of specimens to the office of the Survey at Montreal. Dr. Honeyman has been occupied in the County of Antigonishe, and is now, we understand, in Cape Breton. As no official reports can be expected for some time, the exact scenes of the labors of the officers of the Survey will not, of course, be always accurately known, and, with the results, can only be conjectured in the meantime. The survey, it will be remembered, is geological, and not merely mineralogical. We believe some very interesting additions have already been made to the large amount of paleontological materia accumulated by previous observers. These 'and whatever discoveries of useful minerals are mad will be duly announced in the official report which will not probably be issued more frequentl than once every year or two.—*Mining Gazette*

Insurance.

INSURANCE MATTERS IN MONTREAL.

(From a Correspondent.)

Montreal, Oct. 6, 1868.

Incendiarism is still the order of the day in th city. Since my last we have had *seven* fires, of which were in exposed stables, all purpose fired. Five of them were insured with the "R al," the loss on which, will not, however, exce $1500. The only accidental fire occurred in R way's Ready Relief medical establishment, caus by the man in charge putting the hot ashes i box in one of the upper flats of the buildi The firemen speedily got the fire under, and loss will not exceed two hundred dollars. Mess Radway & Co. have presented the Brigade (wh numbers only 32 men) with one hundred doll for their exertions.

The corporation have not yet offered the $1 reward for the arrest of the gang or any of the g of incendiaries, but the matter is on the order the day for the first meeting of the Council. surance Agents here are rather nettled at remarks in my last, as to their inactivity, yesterday they had a meeting, and it is stated they intend offering a reward of $1000. I h however, no faith that such a step will be tal There has been a meeting of the Corporatio which the question of petitioning the Local G ernment to do away with the present office of Marshal, was debated and finally passed b vote of 14 to 6; this, however, will not hav effect of abolishing the office, though it may c the removal of the present incumbents. T can be no question, that the bill is not pro worked, and it can only be done so by some who can attend each fire on its first discovery

I hear it rumoured that it is in contemplati remove the present agent of the "Provin here and replace him by Mr. T. Hart. This not improve the business, as it is only a few ago, that a judgment for a few hundred d against the company was offered on the street by one of our brokers. No agent can get ness for a company when such facts are known.

The Western, of England, have paid nine lings in the £ to those who had claims in city, and they offer 15s. in full to any clai who may prefer that to waiting for the wi up and final dividend.

FIRE RECORD.—Montreal, Sept.—A fire broke in the building at the corner of St. Paul and St Francois Xavier streets, owned by Mr. Kemb, and occupied by Mr. Radway as a medicine dot. The fire originated in the tincture room in the third story, from ashes in a wooden box, b was promptly put out; damage to the build- in slight; stock mostly saved; building insured in the Citizen, and the stock in the Commercial Lion.—About noon a fire broke out in the back pmises of Messrs. Evans & Mercer. But little dnage was done.—About ten o'clock last night t stable of Mr. Moine, of the Canada Hotel, S Vincent street, took fire. The Fire Brigade s n had the fire extinguished. A quantity of h and other articles were destroyed. The horses w e saved—Stables in connection with Mr. Langk's spice mills St. Gabriel street, in which two h ses were confined. After a little delay the fire w subdued, and an entrance being made into the s ble, the horses were found burnt to death. The s ble was considerably damaged and the hay d troyed. A fire broke out in this same yard o y about a month ago.—A fire broke out in the s ble of Mr. Rolland, St. Dennis street, and d troyed a quantity of hay, but was soon ex- tinguished.—A fire broke out in a stable, the pro- oty of Mr. S. Cote, situated at the end of the Camp de Mars, and extended to a shed in which w e four carriages and several sleighs, which were d troyed. The building is occupied only as a st e for vehicles, and the cause of the fire is quite u ccountable. The property is insured.

QUEBEC, Sept.—A fire broke out in the garret o a house in Diamond Harbor. Owing to the p mpt arrival of the Fire Brigade, and the water b ng turned on in that locality at the time, the fl es were confined to the attic in which they o iginated, and were soon extinguished, but very lile damage being done to the building. The h se is owned and occupied by Mrs. O'Brien, a is insured. The fire originated in a defective c mney.

BUCKINGHAM, Sept. 21.—Dwelling house of H. Parker and store, in the same building, o F. McAndrew, totally consumed. Palmer's lo $4000, insured in the Ætna of Hartford for $ 00; McAndrew, no insurance; goods saved, b much damaged.

ST. THOMAS, Sept. 20.—Hiram Ward's driving h se, on the 2nd concession of Lobo, was struck b lightning. The building was entirely consumed wh all its contents, which consisted of a buggy, w gon, several sets of harness, etc. The building w insured.

OWEN SOUND, Sept. 26.—The school house of S ool Section No. 8, Sydenham, was destroyed b fire, supposed to be the work of an incendiary. Te building and contents were insured for $200.

ST. JOHNS, Q.—House of Mr. Dykman at La- ce; No insurance.

QUEBEC, Sept. 27.—The house of Elzear Guil- t, situated in the parish of St. Christophe d rthabaska, was completely destroyed by fire. Te wife of this unfortunate man, with his two c ldren, aged respectively nine and twenty-three n ths, were burnt before they could obtain n ns of escape. The only remains found the f owing morning of his wife and children were a f bones, near the door through which it is sup- p d they attempted to escape, but were prevent- e from doing so by the flames.

MARINE RECORD.—During a severe thunder s m the brigt. *Sunny South*, (owned by Messrs. T op & Son, of St. John, N.B.) loading with p oleum on the Delaware, below Philadelphia, w struck by lightning; the fluid was conducted t he gases in the hold arising from the cargo, b wing her up, killing none, but badly injuring a on board.

OSWEGO, Oct. 6.—A telegram gives an account of t loss of the Perseverance, by fire. She belonged t the Welland Railway. The account as given b Archibald Graham, a deck hand, is as follows: About one o'clock this morning, when about 20 miles of Pultneyville, we were called up and found the propellor on fire. The fire commenced near the smoke pipe, and in less than fifteen minutes the boat was burned to the water's edge. The two mates, porter, wheelsman and myself launched a life boat, and were picked up by the propellor 'Enterprise,' about five o'clock this morning. The crew consisted of seventeen men and two women, fourteen of whom were lost, including the captain. I think none of the others made any effort to save themselves. I don't know the names of any of the crew. Both vessel and cargo were insured.

EQUITABLE LIFE.—The Equitable Life Assurance Society of New York has deposited $75,000 in U. S. 5-20 bonds. The deposit is for the general benefit of all the policy holders in the Company. It does business on the mutual principle, so as to be unable legally to make a deposit for the security of policy holders resident in Canada.

BRITON MEDICAL.—The Briton Medical and General Life Association of London, England, has made a cash deposit of $100,343.68.

EDINBURGH LIFE INSURANCE CO.—A statement appeared in the *Canada Gazette* of the 1st August respecting this Company, to the effect that a deposit of British 3 per cents had been made, pending an examination of the charter by the law officers of the crown. We were made aware of the incorrectness of this statement at the time, but preferred leaving it to the *Gazette* to make the required correction. It is as follows:

"The statement in the *Gazette* of the 1st August, that the Edinburgh Life Insurance Company had deposited 3 per cent. British Consolidated Annuities, pending an examination of the special terms of their charter, was based on erroneous information. The deposit was originally made in cash, of the amount and at the date specified in the *Gazette* of the 15th of August, viz: $150,000 deposited on the 27th July."

PERTH MUTUAL INSURANCE CO.—Some one who signs himself Nicklin, alleges unfair treatment by this Company, and is writing hard things against the management in the Stratford papers. He says the Company cheated him out of $200, because he was late in paying his assessment, while they paid other losses where the sufferers stood in a similar position. There is probably little foundation for the charges made.

RETIREMENT.—Mr. Wm. Murray, the Assistant Secretary of the Provincial Insurance Company, has been compelled, through failing health, to resign his post. He was a most efficient and obliging officer, and his withdrawal will be a serious loss to the Company.

U. S. OCEAN MARINE LOSSES FOR SEPT.—During the past month 29 vessels were lost, valued at $1,098,000. The total losses for nine months, 1868, to Oct. 1st, were 257 vessels, valued at $11 698,500. The loss for corresponding period in

	No. Vessels.	Aggregate loss.
1867	388	$16,876,100
1866	389	19,680,800
1865	275	20,549,800

—Thirty-two Insurance Companies have made deposits with the government, under the new insurance act.

—A lawsuit was had in Yarmouth with the Insurance Companies respecting the *Eliza Young*, lost at St. John some time since; about 30 witnesses were examined; result not yet known.

DAMAGES BY REMOVAL.

The remarks of an adjuster respecting damages by removal, which we gave last week, are thus criticised in the September number of the *Monitor*.

His positions are undoubtedly correct as to general principles, and as to the reprehensible loose practice, of which most companies are guilty, in adjusting this sort of claim, but he falls into an arithmetical absurdity when he pays the *total* loss *first* and then proceeds, by a separate calculation, to fix the amount due for damages. The point, not visible to my eye, is this. The Company's liability for a pro rata share of the damages being admitted, by what right is the amount of the policy reduced before the calculation for contribution is made? That is to say, is the claim for one portion of the loss of greater virtue than for another portion, and if so, why?

Suppose we invert the order of adjuster's calculations and pay the *damages first*, and the total loss afterwards, thus:—

Value of damaged goods,	$7,000 00
Amount of policy	5,000 00
Amount of damages	800 00
Underwriter's pay on $5,000 5-7 of $800	$571 40
Underwriter's pay for goods totally destroyed	3,000 00
Total claim under policy	$3,571 40

Being a difference of $352 83 in favor of claimant over the amount of adjuster's award.

Will adjuster have the kindness to show wherein the above arithmetic is defective, and explain by what principle he exalts one portion of the same claim, arising at the same fire, upon the same policy, over another portion so as to give it precedence in payment, to the prejudice of that other portion, under a contract that specifically provides for payment in proportion as the sum assured bears to the whole value of the goods.

INTERNATIONAL LIFE ASSURANCE SOCIETY.

A letter appears in the *Post Magazine* of the 26th September, signed by R. Thomson, accountant, respecting the affairs of this company, which it will be remembered was swallowed up very uneeremoniously by the Hercules Company a short time since. From this letter we make an extract:

Sir—A client of mine eleven years ago obtained a profit policy in this society on his own life, and has regularly paid up his accruing premiums. In May last, he received a letter from the Hercules Insurance Company (Limited), informing him that the business of the International was transferred to that company and requesting the policy to be forwarded to the Hercules for indorsement to that effect. The International Society have always advertized their "individual capital" at £500,000 of which at least £200,000 ought now to be "under investment" as a reserve guarantee fund for payment of policies as they fall due. Judge of my surprise on reading a report dated 13th May, 1868, signed "E. S. Symes, chairman," notifying the interest realized on International investments as "£5,471 6s. 3d." per annum, an amount I apprehend "totally insufficient" to pay interest on the "proprietors paid up capital," who by "the way have received no interest whatever for many years past." I know little of the financial position of either society, but am somewhat at a loss to understand how it happens that the International subscribed capital before May, 1868, was £500,000, and the Hercules subscribed capital advertized at £500,000, whilst it now appears the Hercules advertise their "subscribed capital and funds invested" at only $373,869. This it may be observed is after they profess to have taken the International liabilities upon themselves. The International by such report of 13th May, 1868, allege they have received in premiums during the last year of their existence "£34,601 16s. 0d." and paid in claims "£33,432 8s. 0d. ! ! !" whilst Directors of the International are dragooning the Proprietors to pay calls, some of which as it plainly appears were enforceable (if at all) several years since. Both companies are "perfectly silent" as regards the "conditions for the amalgamation" and the amount of consideration passing in respect of it. So far as I have been able to learn, and I "have made ever possible enquiry" neither Pro-

prietors or Policyholders in either company were supplied with sufficient data from which to judge as to the prudence of the important step about to be taken, although the two companies are "differently constituted" and for "widely different" objects.

[This company has some policies here but we presume the holders will scarcely throw away any more money on so shaky a concern.—Ed. C. M. T.]

LIFE INSURANCE.

A passage bearing upon this point by a recent writer is sound in the fullest degree. He urges that "one of the most important benefits to be derived from Life Insurance is, that it enables the man of large means, but of extended and varied business, to provide an amount of ready cash immediately after his death, to be used by his family either to meet their daily necessities or to aid in closing up the estate to the best advantage. To this end some of the richest men in the country have made large insurance on their lives, and the results are always satisfactory. Thousands of dollars have been saved in the closing of estates by means of a small amount of ready money. The records of our Probate Courts will attest to the truth of this statement, and that, on the other hand, thousands and tens of thousands of dollars have been lost, and estates utterly ruined, for the want of a small sum of ready money. Life Insurance provides a remedy for all this; and a policy of insurance on the life of the husband, payable, as the law directs, to the wife and children, does not wait the law's delay, but comes up promptly to the rescue of the hard-earned estate of the deceased. When a house is discovered to be on fire, the first inquiry made is, 'Is it insured?' If not, the carelessness or neglect of the owner is severely reprobated. How much more censurable is it in a father or husband to die, leaving his family unprovided for, when they could have been secured against poverty by Life Insurance. Let every man ponder on this."

The enormous growth of the business of Life Insurance is a strong presumptive argument in favor of its usefulness and the equitable adjustment of its details. If time did not attest and make good their pretensions to benefit the community, the great companies, instead of becoming richer and more respected as they grow older, would fall into disrepute. An enterprise may be conducted on a fallacious basis for a time and may succeed in duping the public to a certain extent, but no such concern will run decades into generations, meeting its engagements on every hand, continually strengthening its hold on public confidence, unless its foundations are stable, healthful and secure. We believe that the great companies are among the staunchest and most trustworthy monetary institutions in the world. Indeed, conducted upon the principles that most of them are, their failure would be as near impossibility as that of any sublunary thing. They are always growing, and they take no risks which are dependent on commercial accidents or monetary revulsions; and hence in the most troublous times they may confidently be expected to stand firm.

We make no scruple, then, in saying to our friends, both in public and in private, insure your lives. None can tell what an hour may bring forth. None can be certain, however prosperous in appearances his affairs, of not leaving those nearest and dearest to suffer a long life of trouble and penury through a negligence which has no excuse. None will die the sooner by being insured, for a prudent and manly regard to a high obligation is rather likely, by setting the conscience and the heart at rest, to protract life than to shorten it. And apart from, and independent of, all this, if only on purely selfish grounds, a careful study of the offers and principles of our best companies will show that Life Insurance *pays*; a consideration which should be of supreme and conclusive weight with our thrifty and far seeing community.

Law Report.

Life Assurance—Interest on Amount Insured.—The assignee of a person upon whose life a policy of insurance has been effected, is not entitled to claim interest on the amount of the policy, until he is in a position to give assurers a full legal discharge upon payment of the claim.—*Toronto Savings Bank vs. the Canada Life*, 14 *Ch. Rep.* 509.

Insurance Interest—Increase of Risk.—In an action on a policy of insurance by A., brought for the benefit of B., an incorporated bank, to whom the policy had been assigned, on a traverse of any insurable interest in B. *Held*, that a warehouse receipt for wheat, the property of A., a warehouseman, signed by a clerk of A., in his own name, was sufficient under 24 Vic. chap. 23, sec. 1, to pass the property in the wheat so as to confer an insurable interest on B.

The policy was subject to a condition that in the event of any alteration, etc., whereby the risk should be increased and a consequent additional premium required, the policy should be void unless notice of such alteration etc., should be given to defendants and allowed by indorsement on the policy, and consequent additional premium paid. It appeared in evidence that at the time the policy was effected by A., he was told by the agent of the defendants that if an elevator were erected on the premises, without informing the defendants, his policy would be avoided, as in that case he would have to pay an additional premium, but this was not inserted in the policy. A. erected an elevator and did not give notice to the defendants. *Held*, on a plea setting out the condition and alleging the erection of the elevator, that the risk was thereby increased, and that a consequent additional premium would have been thereby required, that the jury not having found any increase of risk, the facts afforded no defence.—*Todd vs. Liverpool, London and Globe Insurance Co.*, 18 *C. P.*, 192.

Trover—Property afterwards burned—Receipt by Plaintiffs of Insurance Money.—Plaintiffs had a large quantity of wheat in the warehouse of one T., for which they held his receipt, and defendants also held T.'s receipt for wheat in the same place, on which they had made advances; but there was not enough wheat to satisfy both. T. having left the country, gave R., defendants' agent, a letter to C., who was in charge of the warehouse, directing him to give R. possession of the warehouse and all grain in it belonging to him, T. On receiving this letter, C. gave R. the key, went with him into the warehouse and pointed out T.'s wheat, and received back the key, agreeing to hold possession. On the same day R. again got the key to go into the place with one M., and again returned it to C., who said he considered he still had possession of the store, and that he would not have given up the wheat to the plaintiffs if R. had so directed him. Plaintiffs demanded their wheat from R., who, as they alleged, answered, "I won't do so at present," but almost immediately after defendants' attorney served a written disclaimer on plaintiffs, informing them that defendants disclaimed all possession of the storehouse and wheat therein. On the same day plaintiffs brought trover.

Held, assuming the facts most favorably for the plaintiffs, that it should have been left to the jury to say whether R. entertained a *bonâ fide* doubt as to the plaintiffs' right to the wheat, and whether a reasonable time had elapsed for clearing it up; and *Quære*, whether the facts could legally suffice to establish a conversion.

Evidence was rejected that the plaintiffs had insured the wheat sued for and had received the insurance money, the fire having taken place two days after the alleged conversion. *Semble*, that such evidence should have been received, as shewing the plaintiffs' conduct and dealing with regard to the property after the alleged conversion, and thus being relevant to the issue.—*Gilpin et al. v. the Royal Canadian Bank.* 27 *Q.B.* 310.

Lindsay vs. Niagara Mutual Fire Insurance Company.—This case was tried at the last Woodstock assizes. It was an action to recover the amount of a policy of insurance on a dwelling in Princeton, Totten & J. H. Cameron for plaintiff, C. Brown & Hon. M. C. Cameron for defendant; verdict for plaintiff, $1,201.37½.

Marine Insurance—Total Loss—Notice of Abandonment.—In marine insurance notice of abandonment is indispensably necessary in all cases where the insured elects to abandon.

In this case the vessel insured ran upon the rocks on the 11th October, and the defendants' agent was informed of it by the insured on the 16th October, but he was not informed of his abandonment as for a total loss until he made the protest before the agent on the 17th October, and no formal abandonment in writing, under the terms of the policy, was made until 27th December following, when the vessel had been floated off and utterly lost by the carelessness of the insured: *Held*, that the notice was too late to be available, even if there had been such a loss as would have entitled the insured to abandon.

Whether a loss is to be considered a total loss depends on the fact whether the vessel, as injured is useless to the owner, unless at an expense that no prudent man, if uninsured, would incur—an expense exceeding the value of the ship when repaired. In this case it appeared that on the ninth day after the vessel went upon the rocks, the captain, on returning to her, found her in as good state as on the second day, and that she remained between two and three weeks on the rocks, and then floated two or three miles below. It further appeared that there was not the slightest attempt made to get her off or recover her, or even to examine her, while all the witnesses said they would have tried to get her off, and it seemed beyond doubt that there were eight days during which from the calm state of the weather, an attempt could have been successfully made for with three days after she first ran on she floated again without any assistance, and there was evidence that even one man could have hauled her off, but the captain, a witness stated, intimated to him that he did not mean to do anything with the vessel.

Held, that the evidence wholly disproved a total loss, either actual or constructive.

Held, also, that the fact of the plaintiff not having made any exertion to get the vessel off was no ground for a new trial, as, if the vessel got on the rocks by perils of the sea and was injured, plaintiff was entitled to be indemnified for that; but that he was not obliged to take her off, but might leave her on the rocks until she went to pieces, though he could not recover for the destruction thus voluntarily suffered.—*Harkley* v. *the Provincial Insurance Co.*, 18 *C. P. Rep.* 335.

Berkshire Life Insurance Company,

OF MASSACHUSETTS.

MONTREAL OFFICE:

0 *GREAT ST. JAMES STREET.*

INCORPORATED 1851.—SECURED BY LAW.

AMOUNT INSURED.....$7,000,000.
CASH ASSETS.....ONE MILLION DOLLARS.

$100,000 deposited with the Receiver General of Massachusetts for the protection of Policy holders.

ANNUAL INCOME.....$500,000.

$100,000 divided this year in cash amongst its Policy holders.

Montreal Board of Referees:—Hon. Geo. E. Cartier, Minister of Militia; Wm. Workman, Esq., President City Bank; Hon. J. O. Bureau, M.C.S.; E. Hudon, Fils & Co.; John Torrance, Esq., Merchant; James Ferrier, Jr., Esq., Merchant; Edward Carter, Esq., Q.C., M.L.A.; C. D. Proctor, Esq., Merchant.

Examining Physicians:—J. Emery Coderre, M.D., Professor of Materia Medica, &c., &c., of the School of Medicine and Surgery, Montreal, and of the Faculty of Medicine of the University of Victoria College; William Wood Squire, A.M., M.D., Graduate of McGill College; Francis W. Campbell, M.D., L.R.C.P., London.

For a sufficient test of merit we beg to state since the commencement of this old and reliable company in Canada, we have had the pleasure of insuring members of Parliament, some of the leading legal talent, and amongst numerous others, several of the leading merchants in this city.

This Company was the Pioneer Company of thenon-forfeiture principle, and still takes the lead for every Policy issues is non-forfeitable after one payment. The Company is now erecting a new stone building, five stories in height, at the cost of $100,000, similar to the Molson's Bank of this city, but of much larger capacity, having 75 feet front, and 116 feet depth, containing three Banks, the Express Offices, and the Post-Office, yielding about $6,000 income, annually, all of which is the accumulating property of every Policy-holder.

The Company has issued nearly 2,000 Policies since the 1st January, 1867, which is the largest number, in comparison to the expenses, of any Company in Europe or America.

Such are the Results of the Cash System.

Full particulars, history of the Company, Rates, &c., can be obtained at the Managing Office for the Canadas.

THURSDAY, OCTOBER 8, 1868.

THE INTERCOLONIAL RAILWAY.

The appointment of Commissioners under the Act of last session, relating to the construction of the Intercolonial Railway, the signification by the Imperial Government of their approval of the route selected, and the advertisement for tenders, show that a long talked of scheme is approaching realization. The Duke of Buckingham's despatch, dated 22nd July, is as follows:—

"I have received your Lordship's telegraphic message that the route by the Bay of Chaleur has been selected by the Canadian Government, as the one to connect Truro with Riviere du Loup, and thus complete the Intercolonial Railway.

"I understand three routes to have been under the consideration of the Government of Canada, namely: one crossing the St. John River, either at Woodstock or Fredericton; the second in a more central direction through New Brunswick, and the third following the line selected by Major Robinson in 1848. The route crossing the St. John River, either at Woodstock or Fredericton, is one to which the assent of Her Majesty's Government could not have been given; the objections on military grounds to any line on the south side of St. John River are insuperable. One of the main advantages, sought in granting an Imperial Guarantee for constructing the railway, would have been defeated if that line had been selected. The remaining lines were the central line, and that following the general course of the route surveyed by Major Robinson; and Her Majesty's Government have learned, with much satisfaction, that the latter has been selected by the Canadian Government. The communication which this line affords with the Gulf of St. Lawrence at various points, and its remoteness from the American Frontier, are conclusive considerations in its favor, and there can be no doubt that it is the only one which provides for the national objects involved in the undertaking."

For the sake of presenting at one view the comparative distances (of the different lines projected) from Riviere du Loup to St. John and Halifax, and the number of miles of railway already built, we give this table:—

Frontier Routes.

No. of line.	TO ST. JOHN. Railway Built.	Not Built.	Total.	TO HALIFAX. Railway Built.	Not Built.	Total.
1	27	292	319	184	401	585
2	45	305	350	202	414	567
3	00	301	301	157	410	561

Central Routes.

4	..	326	326	157	435	592
5	..	328	328	157	437	594
6	37	343	380	120	452	572
7	77	349	426	80	458	538
8	37	307	344	120	416	536
9	77	313	390	80	422	502
10	96	326	422	61	435	496
11	37	323	360	120	432	552
12	77	320	406	80	438	518

Bay Chaleurs Routes.

13	37	387	424	120	496	616
14	96	377	473	61	486	547
15	96	390	486	61	499	560

The shortest Frontier route to St. John is 301 miles, and to Halifax, 567 miles; the shortest Central route to St. John is 326 miles, and to Halifax, 496 miles; and the shortest Bay Chaleurs route to St. John is 424 miles; and to Halifax, 547 miles. The average number of inhabitants for each mile of railway by the different routes is given as follows:—

Frontier line	260	per mile of railway.
Central.....	122	" "
Bay Chaleurs ...	235	" "

The route recommended by Major Robinson as the best general direction for the proposed railway is from Halifax to Truro, at the head of the Bay of Fundy, passing over the Cobequid Hills, and on and near to Amherst and Bay Verte, crossing from these over to the River Richibucto and Miramichi; then by the valley of the north-west Miramichi and Nipisguit River to Bathurst; then along the shore of the Bay Chaleurs to the Restigouche River; then by the valley of the Matapedia over the River Metis; then along the banks of the St. Lawrence, at a distance of eight or twelve miles from the south shore to Riviere du Loup. The line is No. 15 in the above table. The distance to St. John and Halifax by this line are estimated as follows:—

Railway to St. John.

	Constructed.	Not constructed.	Total.
From River du Loup, by Metis and Matapedia, to Dalhousie.	..	196	196
From Dalhousie to Bathurst...	..	53	53
From Bathurst to E. & N. A. Railway.....	..	141	141
Along E. & N. A Railway to St. John	..	96	96
Total.....	96	300	486

Railway to Halifax.

From River du Loup, by Metis, Matapedia, Dalhousie, and Bathurst, to Moncton	..	390	390
From Moncton to Truro	..	109	100
From Truro by Railway to Halifax.....	61	..	61
Total.....	61	499	560

As the Imperial Government is in favor of the Major Robinson line, and disinclined to adopt any other, and as the Imperial guaran-

tee is a *sine qua non* in the matter, we have to make the best of what many consider rather a bad bargain. The scheme for a railroad between Quebec and Halifax was brought before the Canadian public by a Nova Scotian about the year 1845, addresses were adopted which led to the offer from the Imperial Secretary of State to cause a survey to be made by an officer of the Royal Engineers, provided Canada, Nova Scotia and New Brunswick would bear the expense. This offer was accepted, and Major Robinson's report was the result. In subsequent negotiations with the Imperial Government, the Robinson route was insisted on by them. New Brunswick refused to adopt it, Nova Scotia naturally preferred it, and Canada seemed willing to accept either it or the line by the valley of the St. John; but conflicting interests brought about the failure of that attempt to secure an Intercolonial Railway. Earl Derby's government decided against the St. John route, basing their decision on the advantage to be derived from security from attack in case of hostilities. It has been stated that Mr. Hincks and some of the English railway contractors, who afterwards had so much to do with the Grand Trunk, were at the bottom of the disagreement, but this has been denied by Mr. Hincks over his own signature, and the failure of negotiations attributed to New Brunswick. At least two members of the present Cabinet at Ottawa were in favor of the Central Route, but it seems that the longest and most expensive, and the least valuable (in a commercial point of view) route carried the day. The estimate made by Mr. Sanford Fleming of the cost of the line is $20,000,000. The British Government guarantees interest on the loan of $15,000,000.

The next question that presents itself is the probable returns for such an expenditure. Halifax is 550 miles nearer to Liverpool than New York, 357 nearer than Boston, 373 nearer than Quebec, and 316 nearer than Portland. It is said the Robinson route will best secure the largest European passenger traffic, the carriage of mail matter and express freight, and could accommodate, next to the Frontier line, the largest amount of "local" traffic. The favourable position of New York and Portland renders them the convenient winter outlets for freight from the Provinces that constituted old Canada. The nearest United States port to Toronto is New York, 540 miles; the nearest to Montreal is Portland, 297 miles; while the distance from Toronto to St. John, by Riviere du Loup, is 913 miles, and from Montreal to the same place 583 miles. However, should the United States prevent our freight from passing through their territory, all we have to do is take it round another way, and the Intercolonial would carry during winter all the freight to and from the seaboard which would bear the cost of transportation..

Toronto is distant from Halifax over 1,168 miles. It costs two cents a ton per mile to move freight by rail, and it would cost $2.23 per barrel to move flour from Toronto to Halifax, while a barrel of flour can now be sent via the St. Lawrence at 50 cents. The fact is, and we may as well admit it, the Intercolonial is a sentimental railway. The money to be spent on it forms the consideration on which the Confederation contract rests. It is rather pleasant to think that Ontario, a Province deriving little or no immediate advantage from the concern, is sufficiently patriotic to shoulder the twelve millions of dollars of debt for the benefit of Nova Scotia, but it is not so pleasant to reflect on the small share of thanks we receive for the sacrifice.

REINSURANCE FUNDS.

The annual statements to be furnished to the Minister of Finance by Fire Insurance Companies whose deposits are under one thousand dollars, embrace two items, namely: "Amount of premiums earned for the past year," and "Amount of premiums unearned for the past year," which will enable one to calculate what the amount of the Reinsurance Fund of such companies should be, and to determine their solvency or insolvency. The statements heretofore made public by some of our home companies have lacked in this particular, so that an outsider could only guess at the probable condition of a company. So much ignorance has prevailed on the subject of a Reinsurance Fund that we were led to explain its object, and to show how in Massachusetts and New York a provision of the kind was rendered obligatory by statutory enactment. We have every reason to consider that our remarks were not lost on some of the Directors of home companies, and that greater attention will be given, for the future, to the subject.

THE PACKING TRADE.

The packing season is now commencing; live hogs are being bought up to a considerable extent. One packing house took, during the last week, 350 head at prices ranging from 5⅞ to 5¾c. live weight. Dressed hogs will not begin to come in freely for three or four weeks yet, and not then unless the weather becomes cold. Should the weather be favourable, there is every reason to anticipate an early commencement and a short season. The high prices of peas, potatoes, and almost every kind of farm produce renders it unprofitable to farmers to feed their hogs long; for this reason also, and on account of the dry summer, we may expect a good many hogs in p condition. We anticipate a pretty lively mar here, and think prices must rule high. A g supply of money will be forthcoming and com tition will be keen. The present high figures, which pork rules, is an element of danger t should not be lost sight of. This will make drain on the funds of our banks heavier, and tending to make the more cautious dealers h back, may check to a wholesome extent the sp of speculation. Stocks of cutmeats of all ki are run very low. Our lumbermen had to sup themselves lately almost wholly from the Chic market, where very considerable operations h taken place recently on Canadian account. M of these purchases were no doubt made in ant pation of a scarcity at the commencement of h bering operations and prospective high prices Canadian markets.

From the carefully written circular of Mes Henry Milward & Co., published elsewher good idea may be formed of the prospects of Western trade. The season there will open l A careful estimate shows that there will be increase of consequence in the number of hog the West. In Canada we think there has beer increase whatever, but it is probable that the n ber of hogs marketed will be much the sam last season. A private letter from a leading in Dublin, Ireland, estimates a decrease of 500, in the number of hogs in that country as comp with last year. Our dealers, while generally ing the necessity of caution, take a hopeful v of the trade. So far as the Toronto marke concerned, there will be a considerable exten of this already important and growing branc industry.

WOODEN AND IRON HULLS.

To the Editor Monetary Times.

The occasional though serious disasters w have befallen the Royal Mail Line of Steame descending the River St. Lawrence, between K ston and Montreal, during the past three or years, and the severe losses sustained in co quence of these disasters, render it, I thin matter worthy the consideration of underwri whether hulls built wholly of iron are so adapted for the navigation of our inland wate those built of wood. For ocean-going craft, w have not to encounter the hidden dangers of r navigation, I am prepared to admit the superi of the former material, but for rapid and sha water, such as often prevails on that part of St. Lawrence to which I have made reference, w the slightest error in judgment of the perso command, the momentary inattention of the wh men, or the trifling derangement of any portio the machinery, causes ever so slight a deviation the proper channel, and the vessel at all tou those hidden enemies, a shock, which might per cause the starting of a plank or two and displacement of one or two timbers of a wo hull, may possibly result in fatal injury to iron vessel. As an example of this I may men I think the "Grecian," some three months ag though her encounter with the sharp point rock created, at the moment, no undue a amongst those on board, yet, so rapid was her mersion, that she was run aground at the he

n's Island, and, on being raised some few weeks sequently, it was found that for upwards of nty feet her bottom had been ripped along, as ugh it had been done by a pair of shears. The ure and extent of the casualties to other vessels his line, tend also, I think, upon the whole, to out the opinion that the advantages possessed ron over wood, in the construetion of hulls—rring, of course, to the navigation of our inland ers—are, in a great measure, imaginary. As rds the insuring of these vessels, I eannot see these supposed advantages—even with the ailing exeessive competition—should be suffiit to force underwriters into a breaking away from some of those prineiples whieh they have laid n as a rule and safeguard. This, I conceive, y have done from year to year hitherto, by subting to a too low valuation, the applieation of r policy under fire conditions during the winter son, and the ignoring of that most important dition, the deduction on the hull of one-third for old in case of partial loss, to say nothing material reduction on tariff rates of premium. he subjeet upon which I have ventured these remarks is, perhaps, deserving of attention, n from those without the insurance pale. I t, however, that in the preparations by underers for the business of another season, it will be med worthy of their consideration.

Yours, most truly,

INSURER.

oronto, 7th Oct., 1868.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

here was considerable activity in the stoek ket this week, and prices are well maintained. *Bank Stock.*—There is a great demand for Mon-l at 135, holders asking 135½. Sales of ario oeeurred at 98½ to 99, which latter figure reely offered. Toronto is in demand at 116½ to 117. Holders generally ask 92 for Royal Canan, small sales oecurring from 91 to 92. Paid Commeree is offered at 103¾. There were small nsactions in Gore at 40. Buyers offer 105 for rchants', sellers asking 105½. City eould be ced at 102½, holders asking 102¾. There are ers of Du Peuple at 105½. For Jacques Cartier buyers offer 106, holders demanding 108. yers would give 96½ for Mechanics'. In other ks nothing doing.

Debentures.—Sales of Canada six per eents oered at 100¼. Sterling five per eents are offered a 90¼. Toronto are offered to pay 7 per cent. erest. Considerable amounts of County changed ds at rates to pay 6¼ per cent. interest.

Sundries.—Building Society stock active and her. There were considerable sales of Canada manent at 120½ and 121, and there are still yers at these rates. Western Canada has been lt in freely at 113 to 113½, and is still procurae at the latter rate. City Gas sold at 104½ to 5. There are buyers of British America Assurae at 55 to 56. Considerable transactions in nada Landed Credit oecurred at 63 to 64 for ck, $20 paid. Mortgages are mueh asked for, very few offering. Money is readily proeurae on good paper.

MONTREAL MONEY MARKET.

(From our own Correspondent).

Montreal, Oet. 6, 1868.

The money market remains very quiet, and I ve no special feature to note; there is a steady mand for accommodation at the Banks, but y much less than last year; this, with the inactity of the Produce trade, and the general quietss of business, has led to a considerable accumulation of idle eapital at some of our leading institutions. The rates at the Banks are 7 to 8 per eent. for first class Commercial paper, and 8½ to 10 for other, aeeording to names. Advanees on warehouse reeeipts are made at exceptional rates. On the street, business is dull, the bulk of paper offering being less desirable than usual; diseount ranges from 12 to 16 per cent. The Stock Exehange exhibits a marked improvement, favourite securities having advaneed; Bank of Montreal is offered at 135½, with buyers at 134¾. British wanted at 103½. City sold at 102¾, and is now wanted at 103. Ontario, small sales at 99½ to par. People's 105½. Other stoeks and shares firm at the quotations given in our daily lists. Large sales of Dominion stoek at 101, and buyers still at that rate, but sellers want 102.

Mr. Weir continues to push forward his proposition for the exportation of silver eoin, but owing to the magnitude of the enterprise, he has found it neeessary to extend the time for reeeiving the eontraets to the 5th day of November next. This is now of less importance, as the diseount has already fallen to about three per cent. and will likely remain low until the result of his movement is made known. It will be unfortunate if the present exeeptionally low rate of discount should lead those interested to treat his proposal with indifferenee till it is too late, as in that ease the rate of diseount must again advanee to four and one half per cent.

The details of Mr. Weir's proposition have been submitted to the publie. I understand that he has also secured the services of a gentleman well known in Ontario, to visit the principal cities and towns in the west in connection with the movement.

BANK OF ENGLAND.

The following statemeut shows the condition of the bank for the week ending Wednesday, Sept. 16, 1868:—

Issue Department.

Notes issued	£34,612,035
Government debt	£11,015,100
Other securities	3,984,900
Gold coin and bullion	19,612,035
Silver bullion	
	£34,612,035

Banking Department.

Proprietors' capital	£14,553,000
Rest	3,615,980
Public deposits (including Exchequer, Commissioners of National Debt, Savings' Banks, and Dividend Aecounts)	3,975,728
Other deposits	19,309,767
Seven day and other Bills	590,204
	£42,044,688
Government seeurities (ineluding Dead Weight Annuity)	£13,790,131
Other seeurities	16,124,020
Notes	10,966,580
Gold and silver coin	1,163,927
	£42,044,688

The return eontinues to attest the slackness of the demand for money. The private securities have fallen off until they stand at little more than £16,000,000, while the unemployed reserve has enlarged eonsiderably, so that it now exeeeds twenty millions. The private deposits are lower, but only to an ineonsiderable amount, and the public deposits are inereasing. The bullion has increased nearly £40,000.

COUNTERFEITS.—Counterfeit $4 notes of the Niagara Distriet Bank have been circulated in St. Catharines. A local paper says they are a close imitation of the gennine, and are likely to deceive those not initiated in the detection of counterfeits. The notes are darker colored, shorter and wider, as well as softer in texture, than the genuine. The easiest method of detection is in the portrait of the Hon W. H. Merritt, whose features have a sharp, eontraeted expression, and the eyes are unnatural. Bills of the same denomination of the Gore Bank have also been passed off to a considerable extent. The figures indicating the number of the bill are much larger than in the genuine.

REVENUE AND EXPENDITURE.—The revenue of Canada for September was as follows:

Customs	$935,114
Exeise	161,845
Post Office	16,495
Bill Stamps	11,558
Publie Works (inelud ng railways)	106,793
Miseellaneous	614,559
	$1,846,364
Expenditure	$2,294,409

SALE OF STOCKS IN ST. JOHN.—At a sale of Stocks by J. D. Nash the following prices were realized:—Ninety shares in the Union Bank $53. 75 at $54; one share Bank B. N. A., £66 1s. 3d; one share Horticultural Gardens $41; one Provineial Railway Debenture £100 stg., £102 stg.; $2,500 School Debentures $96; $800 City Prison do $95; ten shares Salt Company $20.25; £100 stg. Windsor and Annapolis Railway Bond, 6 per cent., Coupons attached, £87 10s. stg. asked, £50 stg. offered. The following Gold Stoeks were offered at the following priees, but no sales effected:—Imperial 20 ets.; Uniacke Union 9 cts.; Uniacke Central 9 ets.; Prinee of Wales 12 cts.; Eureka 5 ets.; Brunswiek 12 cts.

At a recent sale of stock in Halifax, the following prices were realized: Sixteen shares in the Halifax Gas Co., £65 5s.; eight Halifax Fire Ins. Co., $37 50; and shares in the Queen's Gold Mining Company at Mount Uniaeke, 55 cents; Westlake Gold Co. at do., 50 eents; Dominion Gold Stock, 75 cents offered, $1 40 asked; Mount Uniacke do., 12½ eents asked; Central Gold do., 7 cents offered, 13 asked; Nova Seotia Marine Ins. Co., shares were offered at £42, £37 10s. bid.

UNITED STATES ASSAY OFFICE FOR AUGUST.—Below we give the statement of business at the United States Assay Offiee at New York for the month ending August 31, 1868:—

DEPOSITS OF GOLD.

Foreign eoin	$8,900 00	
Foreign bullion	144,100 00	
United States bullion	1,302,500 00	$1,455,500 00

DEPOSITS OF SILVER, INCLUDING PURCHASES.

Foreign coins	$4,000 00	
Foreign bullion	13,500 00	
United States bullion (contained in gold)	12,500 00	
Montana	3,500 00	
Colarado	16,500 00	
Lake Superior	2,000 00	
Nevada	18,500 00	$70,500 00
Total deposits, payable in bars	1,426,000 00	
Total deposits, payable in eoins	100,000 00	1,526,000 00
Gold bars stamped		1,142,785 25

CATTLE DISEASE.—The order prohibiting the transportation of Amerieau cattle over our railways has, we believe, been revoked, all restrictions to ease on and after Oct 1st.

—A Quebec paper has reason to believe that the Local Government has ceded 1200 acres of land to the Gosford Railway Company, at the rate of 30c. per aere, and the eompany has therefore undertaken to lay down firewood in Quebee at $2.50 to $3 per cord.

—Work on the European and North American Railway is being pushed on with vigor.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending 18th Sept., 1868.

Passengers	$41,722 12
Freight and live stock	38,974 06
Mails and sundries	2,243 75
	$82,939 93
Corresponding Week of '67.	82,452 36
Increase	$487 57

NORTHERN RAILWAY.—Traffic Receipts for week ending Sept. 26, 1868.

Passengers	$4,163 35
Freight	8,876 41
Mails and Sundries	274 74
Total Receipts for week	$13,314 50
Corresponding week 1867	13,287 78
Increase	$26 72

WOODEN RAILWAYS.—Application will be made to the Quebec Legislature, at its next session, for an act "to revise, continue and amend the charter of the Drummond and Arthabaska Counties Railway Company." If we mistake not, this is the first practical step towards the construction of a wooden railway from Arthabaska to the line of the Grand Trunk Railway, at or near Upton. Some of the interested municipalities have undertaken to promote the work, which was projected on its new basis by Mr. Hemming, M.P.P. for Drummond and Arthabaska.

GRAND TRUNK.—A little sunshine we hope is about to be felt by this Company. We are unable to say precisely whence it will come or in what degree it will be produced, but we believe all down to and including the 4th Preference will experience the warmth of its rays.

It is said that within the last few years Montreal has doubled in importance and business, and bids fair to do better in future. The railway seems to have kept pace with the great City of Canada in progress, and if it should do so in future in a few years' time the Grand Trunk will earn £50,000 a week traffic. —*Herapath's Journal.*

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, Oct. 6, 1868.

After cold and wet, the weather has now set in fine and bright, though cool, with every chance of having a spell of it. This is most favorable for housing the root crops, which takes place about the end of this month, with the exception of potatoes. ; I fear the housing of the others will take little time or trouble as they are very short.

The fall fleet is now dropping in, the "Anglesea," "Gleniffer," "Queen of the Clyde" "Shandon," "Florence Lee," "Island Queen," "Thistle," "La Plata" and "Abeona," having arrived, and are busily discharging their cargoes, consisting of heavy goods. Of these the "Gleniffer," "Shannon," and "Abeona," are here on their third voyage this season. So far, we have little or nothing in the way of return cargoes for them : and it is to be hoped that produce will shortly come forward in sufficient supplies, and selling at such prices as will enable us to fill them up speedily, causing no detention. Should such not be the case, the shipping interest of Montreal will be seriously damaged, as shippers will hardly risk sending vessels here, to be either detained till the dangerous season for navigating the Gulf sets in, or the insurance rates rule so high as naturally to affect profits. The Allan's steamers have lately been winning golden opinions by the shortness of their passages—the average having been less than ever before made. We Montrealers feel great pride in this fine line, especially of late, since accidents of any sort have been of rare occurrence ; and all Canada ought to join with us in wishing success to a line which is, emphatically, the national one of the Dominion, and nearly the only one that has competed successfully with the Cunard line.

PRODUCE MARKET.—Business continues very quiet ; small sales of flour on the spot ; some sales of round lots of ordinary to good supers., in shipping order, at $5.45 to $5.50. There is no tendency towards speculation ; but the light stocks—only 16,607 brls. on 1st October, against 24,892 brs. last year—have, for the present, checked the downward tendency. Several small cargoes of wheat sold during the week to local operators. Prices are : U. C. Spring and red winter, $1.25 ; Chicago No. 2, nominal. Imports : 1st January to 30th September, 1,229,773 bushels, against 1,066,800 bushels in 1867, showing an increase of 152,973 bushels. Coarse grains remain unchanged. A cargo of 10,000 bush. peas sold at $1.06½ per 66 lbs.

PROVISIONS.—Pork and cut meats are very quiet, and unchanged in price. Receipts of butter during the last few days have been heavy, but prices are fully maintained—choice dairy selling at 24c. for shipment. Cheese in moderate enquiry, at 10½c. to 11c.

GROCERIES.—Our first batch of fall sales are over. The attendance of buyers was large, and a considerable amount of business was done. At Buchanan, Leckie & Co.'s tea sale only a few hundred packages were left unsold, the trade being anxious to stock themselves, especially in the finer qualities, and sellers were willing to meet their views. The prices were hardly up to expectation, but, still, good and remunerative. At D. Torrance & Co.'s sale the quality was not so good, and buyers were not so anxious. Messrs. Torrance were, however, very stiff, and the consequence is about one-half offered was withdrawn. The sale of their portion of the "Annie Braginton's" cargo, and also another on joint account of two houses here, in New York, strengthen the market greatly, and dealers who have not stocked themselves will, I expect, have to pay higher rates. A considerable quantity of wines and Mediterranean goods were also placed, prices ranging pretty much the same as they did in the spring. As prices on the continent have advanced during the spring and summer, our fall imports have cost more ; and those prices which left a profit here last spring barely clear importers this fall. I give you the imports here of the leading groceries, from the 1st January to the 30th June ; they having been only just made up :

Coffee, lbs.	548376	874917	lbs.	564623	$70525
Fruit, lbs.	4450090	219666	lbs.	6217617	300533
Brandy, gals.	189170	196152	gls.	97175	102791
Gin, gals.	185059	76213	gls.	251938	109618
Rum, gals.	61808	23251	gls.	55596	24858
Molasses, lbs.	9069701	161551	lbs.	5311292	101791
Tea, lbs.	4826216	1679424	lbs.	4575657	1550204
Tobacco, lbs.	465261	57992	lbs.	357411	56431
Sugar, raw, lbs.	33947748	1379595	lbs	31904468	1595073
Cane Juice, lbs.	5475268	115760	lbs.	7408533	197599
Common Soap, lbs	877506	26927	lbs.	321505	1 307

I give the total imports of the port for the same period :—

1867.	1868.	Decrease.
$29,213.067	$24,836,208	$4,376,859.

The bulk of this decrease occurs in dutiable goods.

Total value of dutiable goods imported for—

1867.	1868.	Decrease.
$21,851,103	$19,237,977	$2,613,126.

Do. Free Goods :

1867.	1868.	Decrease.
$7,361,964	$5,598,231	$1,763,733.

DRY GOODS.—Although the great rush is over, we have had a very steady trade during the week, which I expect will last nearly the whole month. There are a fair amount of orders coming in, and several considerable buyers are in town. The importers have done a better business than they expected, and the season will most probably close with light stocks of staples, especially cottons prices have ruled firm, and now remittances are coming in more freely, so that the business altogether is in a healthy state.

Toronto Market.

The weather of the past week has been favorable to business. The same is true of the past few weeks which have elapsed since the commencement of the fall trade. It is seldom, indeed, that farmers have so favorable an opportunity, on account of the dryness of the roads and the moderate amount of rain, to get their produce to market. This fact is telling favorably on the demand for dry goods, groceries, hardware, &c., and its influence is being felt in an increase of money in circulation, and greater promptness in payment on the part of country merchants.

DRY GOODS.—Importatians continue light. Stocks are being steadily worked off, and will reach at least a safe point, if, indeed, the assortment does not become badly broken, before the season closes. Payments are getting better as the season advances.

GROCERIES.—Trade for the week is reported quite up to the mark, and everything is moving along satisfactorily. *Sugars* are steady at old quotations ; Redpath's prices were advanced ½c a cent on Tuesday. *Teas.*—A considerable jobbing business has been done ; but, as usual, terms have been kept strictly private. *Fruit.*—Certain kinds of raisins are advanced, owing to lightness of stock. *Tobaccos.*—Only a very moderate amount of business doing, at quoted prices.

GRAIN.—*Wheat.* Receipts for the week by cars 15,291 bushels, against 900 bushels the previous week. The demand is strictly limited to millers' requirements, and with good receipts and heavy markets abroad, our market has not only ruled low but is quotably lower than last week. There are now free sellers at $1.15, and some buyers at $1.20 for good spring. Fall is somewhat scarce, what accounts for the few lots which have been put on the market going off at good prices ; $1.35 to $1.40 would be paid for prime samples. *Barley.*—Receipts by cars for the week 41,103 bushels, against 38,000 bushels last week. Shipments for the week 75,121 bushels, and 94,550 bushels the previous week. Total shipments since the commencement of the season, 393,848 bushels, to October 1st, of which 110,971 bushels were shipped in August and the balance in September. The following vessels cleared with cargoes of barley during the week ended with Saturday last :—

Schooners "New Dominion," with 13,624 bushels ; the "Mary Taylor," with 9,200 bush ; the "Coney Lass," with 16,000 bush. ; and the "J. Beard," with 10,007 bush., all for Toledo ; "Whaling," for Milwaukee, with 15,025 bush ; the "Eveleen," with 5,944 bush., and the "Wellington," with 5,321 bush., for Oswego.

The market opened a week ago at $1.16 to $1.18 and moved up to $1.38 and $1.40 at the close ; numerous sales occurred during the week, among which was a lot 40,000 bush. at $1.25 f.o.b. *Oats* —Receipts by cars, 3,671 bush. ; the market is dull and 3 cents lower, closing at 48 c. *Peas* Receipts by cars, 2,944 bush. ; the market is steady at 90c. to 92c. ; sales of several car lots occur at these prices. *Rye* selling at 80c.

FLOUR.—Receipts by cars 3,700 brls., against 900 brls. for the previous week. The demand is very slack, and there are free sellers but few buyers. Superfine has declined 30c. to 50c. on quotations of last week, closing nominal at a $5.00; sales during the week ranged from $5 to $5.25. Fall wheat flour has latterly met a better demand, but was this week dull and going without enquiry at $6.50 to $6.75.

PROVISIONS.—*Butter* is more active and in demand at steady prices; a round lot of 450 p

dairy and store-packed mixed sold at 21½c. on ears; another lot of 150 packages is offer- at 22½c. *Chese* is firm. A lot of 400 boxes eported sold at 11½c.; Holders generally ask to 12½c. *Pork*—Holders of mess are very at $25 for small lots. There is a general on that there will be a great scarcity before ew hog crop comes into market; live hogs are lg at 5⅜c. to 5¾c. to packers.

OPS.—There is no demand above 16c. for good but this figure holders refuse to accept, ask- 20c., which is now an outside price in view e quotations given in the American markets. the unpleasant fact that our market is open mericans while theirs, by a five cent duty, is d to us. This is an unwise and unsatisfactory gement, and unfair to our dealers and grow- We have previously given our objections to ving the present state of matters to exist, and k that if vigorous and united efforts were e by those most interested, a change might fected.

VE STOCK.—*Cattle.*—The market has been ly supplied with first-class cattle, but there is eat abundance of inferior; prices range from o $6.50, according to quality. *Sheep* were plentiful, and sell at $2 to $5 each. *Lambs* worth $1.50 to $3. *Hogs*—$5.37½ to $5.75, weight.

PPLES—Selling at $1 to $2.50 per barrel.

ETROLEUM. — The Combination, it now ap- s, has been extended to January 1st. There signs of weakness visible, and it cannot be cted that so unadhesive a concern as an oil could stick long together. Possibly the first anuary may dissolve the organization. In case what about prices? They may go lower, as stocks will have been pretty well worked as we will be in the middle of the season n the demand is greatest, and as, by every pro- lity, good arrangements will have been com- ed for the exportation of our own surplus oil re stocks can again accumulate, their seems le reason to anticipate a return to low prices. his market the demand is good, though in l lots, and prices are unchanged.

The Packing Season.

e condense the following respecting the pros- of the in-coming season from Henry Milward o.'s Circular, dated Chicago, Oct. 1st:

ut of ninety-two points in Illinois, Indiana, a, Missouri and Kansas, from which reports e been received, the number of hogs in the ntry returned as more than last year sum up ty-one; as about the same, twenty-six; and ss, thirty-five. Personal investigation through nsiderable region of country in the States of ois and Iowa would lead us to the belief that t of the hogs at all fit for slaughter have been rketed; that the stock hogs constitute the ipal number now remaining, and that these not be made fit for market before the middle close of the ensuing packing season. Of the dition of hogs in Indiana, Missouri and Kan- we have had no opportunity of judging per- ally, but from the reports received we assume t they are in the same condition as in the States ore mentioned. Our approaching packing sea- will probably commence very late, as the sent prices for hogs are quite sufficient to appal n the most venturesome among packers. We not expect to be in full work much earlier than 1st of January, at which time last year packers e talking of closing their houses. It is diffi- t to predict the probable range of prices, so ny unlooked for contingencies may arise. Last r some 80,000 hogs were packed in this city ing the months of August and September, and ice-cured products were, about the present e, coming into competition with the winter- ed. This year no hogs have been packed, and re is little chance of any parties engaging in business, as apart from the danger of spoiled meat, the price now ruling for hogs would preclude the possibility of furnishing products at anything like the rates at which winter-cured can be obtained. The stock of provisions in our market a week ago, by the most careful personal investigation, was: Mess pork, 9,820 brls; prime mess, 275 brls; extra prime, 175 brls; total, 10,270 brls. Lard, 6,607 tcs; bulk shoulders, 2,700,000 lbs; bulk sides, 95,000 lbs; Cumberland middles, 117,000 lbs; clear sides 800,000 lbs; short ribs, 700,000 lbs; total cut meats, 4,412,000 lbs. The shipments since then to the prosent date have been as follows: Pork, 3,440 brls; lard, 2,600 tcs; cured meats, 1,626,177 lbs—leaving as the present stock, pork, 6, 830 brls; lard, 4,007 tcs; cured meats, 2,785,823 lbs. The shipments from here for the last month have averaged each week, pork, 1,786 brls; lard, 1,685 tcs; cut meats, 1,312,114 brls; and as they seem to be increasing rather than diminishing, we shall be entirely bare of stocks before the expiration of the month of October, while from present appearances as to the price of early hogs, we can have no meat cured fit for smoking before the 29th of December. The shipments of products for the month of October last year summed up as follows: Cured meats, 1,934,487 lbs; and for November, 3,510,859 lbs; total 5,445,346 lbs. Of pork in October, 5,852 brls; in November, 11,134 brls; total, 16,885 brls. Of lard in October, 12,276 tcs; in November, 12,988 tcs; total, 25,264 tcs. Last year we had an early spring, and a large amount of autumn packing was carried over in salt till far in December and January. The packers show little disposition to make contracts for the sale of stuff for forward delivery, as they find it utterly impossible to make any forward purchases of hogs. There has been some inquiry for English meats, and offers have been made to sell Cumberlands, 25 to 30 days in salt, delivered here in the first fifteen days in January, at 11c. per lb. Short rib could probably be had at 12½c to 12¾c, same delivery. The English buyers, however, wish the delivery to be as early as possible in December, which the packers do not dare to accede to, knowing the season must be late. It is probable that but few sales will be made until the packers have ascertained that they can obtain hogs at prices likely to afford them some remuneration, as from present appearances the opening rates are likely to be high. Some sales of lard for December and January delivery here, have been made at 13¾c and 14c; but it is now held higher.

Exportation of Cattle.

The St. John's (Quebec) *News* says:—Large quantities of cattle are still being exported from Canada to the States. A drove of some 500 head brought, we believe, from the vicinity of Lachute was sent out from St. Johns on Monday. The prices paid, we are told, are not high, in the present instance the average for two year olds being only $11 per head. Other stock is also steadily purchased for the American markets, the demand for fowls being particularly brisk. Fodder in Western Canada being scarce, we learn that much live stock will be sent to this Province for wintering.

Petroleum.

The quantities of Petroleum exported from the United States to foreign ports from January 1st to 2nd October, were:

FROM	1868.	1867.
Boston	1,924,498	1,567,087
Philadelphia	28,401,987	20,981,989
Baltimore	2,042,775	1,234,726
Portland	558,970	
New York	43,154,013	22,297,443
Total gallons	76,092,243	46,081,245
Corresponding period, 1866, gallons		45,182,022
Corresponding period, 1865, gallons		15,574,295

Receipts at New York, Jan. 1st to Oct, 2nd, 1868, 746,115 bbls.; corresponding period in 1867, 982,164 barrels.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s circular, dated Georgetown, 7th September, 1868:

SUGARS.—On the 1st inst. intelligence was received of a decline in the New York market, and parcels which commanded $6.30 to $6.40 the day before fell to $6 to $6.10; no change for the better has shown itself, and a good many holders are accepting current rates in preference to shipping. Towards the end of this month almost every estate will be manufacturing, and produce will then be plentiful.

MOLASSES.—Vacuum Pan has followed sugar, and 24 to 25c. is now difficult to obtain for some qualities that before commanded 30 to 32c. Muscovado is in better demand for Lisbon and B. Provinces, and good samples fetch 24 to 26c.

RUM.—There have been some transactions for Halifax and Bermuda at 40 to 42c.

Transactions have taken place during the fortnight at the following rates:

SUGARS (package included) sold by 100 lbs. Dutch, 10 per cent. tare F.O.B.

Muscavadoes, equal at	No. 8 Dutch Standard	$3.60	} In hhds. of about 1800 lbs. each.
No. 10 do.	$4.00	"	
" 12 do.	$4.25	"	
Vacuum Pan No. 12 do.		$5.50	
" " 14 do.		5.75	
" " 16 do.		6.00	
" " 18 do.		6.10	

MOLASSES (package included, sold by Imperial gallon.)

Muscovado, from 20 @ 26 cents, as to color and density	} In puns of 100 gals.
Vacuum Pan from 20 @ 25 cents, as to color and density	
RUM (colored, package included, sold by Imperial gal. from 35 per cent, @ 38 overproof 38 @ 40 cents. From 38 per cent. @ 40 overproof, 40 @ 42 cents.	} Ditto.

FREIGHTS—Are in a wretched state, nominal at 1s. 9d.; an unclassed vessel is offering to take sugar freight free to London. The shipments to America last month were 2,100 hhds. against 1,700 to the United Kingdom, and a like proportion is likely to be the case this month; no charters have been effected since our last.

WEATHER—Has been intensely hot and dry. Water is beginning to run short both in town and country, and many estates are taking in salt water for navigation purposes. The Lamaha Canal is too low for estates to use, and serious fears are entertained for the young canes if we are not soon relieved by copious showers.

St. John Market.

BREADSTUFFS. — Sept. 30.— Receipts for the week are as follows:—Grand Trunk Railway, steam and sailing vessels, 4,700 barrels of flour. Via Gulf of St. Lawrence and E. & N. A. Railway—none since 1407 barrels Flour on 17th inst. From New York per sailing vessel, 439 bbls. flour, 100 bbls. oatmeal; from Boston by sailing vessel 95 bbls flour and 25 sacks California do.

Our flour market, which has been very bare for the last few weeks, has been largely replenished during the past week, and the prices which a week ago for Canada flour were relatively high, have dropped to a level more in accordance with rates in Toronto and Montreal. The decline within the week has been about thirty-five cents per bbl. for all grades. The stock of flour now in the city is moderate, and as the fall trade will soon commence, we look to a brisk demand and fairly remunerative prices for the miller and consigner. We quote Canada super. $6.90 to $7.00, choice $7.25. Cornmeal very firm at $4.60.—*News.*

Copyrights.

The Copyright Act, imposing 12½ per cent. duty *ad valorem* on British copyrights reprinted in foreign countries and imported into Canada, came in force on the 28th Sepeember.

Halifax Market.

BREADSTUFFS.—Sept. 29.—Flour market dull and depressed. Canada No. 1 offered at $7.25, but we think could be bought a shade lower. Extra $8.25 to$8.30; Extra State $6.75 to $7.25. Rye dull. Corn Meal dull at $4.60 to $4.75; Fresh Ground $4.40 to $4.50. Oatmeal dull at $7.75 to $8. Imports from January 1st to September 29th, 1867 and 1868:—

	Brls. Flour.	Brls. Cornmeal.
1868.....	132,265	41,107
1867.....	134,139	29,951

WEST INDIA PRODUCE.—Prices of both Sugar and Molasses are without change. Holders are firm, and are looking forward for an advance, as the markets in Boston and New York are steadily improving. Sales of small lots by retail, but we have no sales of cargoes to report. Porto Rico 6 to 6⅜c.; Barbadoes 5¾ to 6c.; Cuba 5¼ to 5½c.; Centrifugal Cuba 6c. in bond.

FINANCIAL.—Bank drawing rate on London 60 day sight bills 13 per cent. prem.; private 12 to 12½ per cent. prem. New York Gold drafts at sight, 4 per cent. prem. Currency drafts 25½ per cent discount. Montreal sight drafts 4 per cent. prem. Newfoundland sight drafts 5 per cent. prem.—*R. C. Hamilton & Co.'s Circular.*

St. John Market.

Sept. 22.—*Breadstuffs.*—Since our last week's report flour has commenced coming in from Canada and prices have declined. The arrivals for the week have only been about 4,500 barrels, but the decline in Ontario and Montreal has met with a ready response here. We hear of some sales of very choice flour at $7.25 to $7.40 and in all probability No. 1 Super. could be bought in round lots at $7. The trade still keeps rather dull although a slight improvement has taken place during the week. We look for a brisk demand during the ensuing two months. Canada flour is driving American brands entirely out of the market.—*News.*

The Cotton Crop.

The very large receipts which we are now reporting from week to week by telegraph, cannot be taken as a fair indication of the total crop. They show, however, what we have all along stated, that cotton is more forward than usual. This is certainly a favourable fact. Up to this date probably much more has been secured than at the same period last year. When we hear, therefore, of damage from worms and rust, and rain, it is well to remember that the start is better than in 1867, and if we have a return of fair weather, with a late fall the prospect is still good for an increased yield. Reports this week continue, however, unfavorable. Less rain has fallen, but the weather is still unsettled. We hear fewer complaints of worms, except in South Carolina and Georgia, where they are reported in sections hitherto free of them. The accounts from Texas are better.—*Financial Chronicle.*

The New Ship "Lake Ontario."

This fine new clipper ship. the first of a fleet of vessels now being built on the Clyde for the Canada Shipping Co., of which Mr. Wm. Murray, of this city, is President, arrived in port yesterday morning, and is now lying in the Metcalf Basin, almost opposite the Royal Insurance Buildings. The *Lake Ontario* sailed from the Tail of the Bank at Greenock, at half-past two on the afternoon of the 11th ult., and after making a very unusual run, entered the straits of Belle Isle on Tuesday, the 22nd, reaching Bic on the 30th, and Quebec on the 5th October. She is a handsome vessel, and of somewhat greater capacity than the general class of ships entering this port. Her length is 210 feet, keel and forerake; beam 34½ feet, tonnage 1,060, and is capable of carrying 1,500 tons burden. The *Lake Ontario* is constructed with the latest improvements in ship building, and carries what few vessels do, viz., a Donkey Engine, which is a very great assistance n driving the pumps, warping, discharging cargo, and otherwise taking the place of a vast amount of manual labor. The crew is 30 in number, commanded by Captain Ritchie, who can boast of having brought out one of the finest sailing vessels that ever arrived at this port. She was built by Messrs. Barclay, Curle & Co., Glasgow. Messrs. Thompson, Murray & Co. are the agents of the Company here.—*Herald*

Consumers' Gas Company.

THE Annual Meeting of the Stockholders of the Consumers' Gas Company of Toronto, to receive the Report of the Directors, and for the election of Directors for the ensuing year, will be held at the Company's Office, on Toronto Street, on

Monday, the 26th October inst.,
At Seven o'clock p.m.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Company.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

OF EVERY DESCRIPTION ON HAND.

Send for Circular and Price List. 31-6m

Extract of Hemlock Bark—Extract of Oak Bark.

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark*; 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

Live Stock Insurance Company.

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importanee of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.
At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.
HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.
A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country, has been steadily prospering. The *Massachusetts Insur Reports* show that in nearly all important matters superior: o the general average of Companies. It offe intending assurers the following reasons, amongst o for preferring it to other companies:

It is purely Mutual It allows the Insured to tr and reside in any portion of the United States and Eur It throws out almost all restriction on occupation fron Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note all cash company. Its Dividends are declared annu and applied in reduction of Premium. Its Dividend in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for year the policy has been in force. The number of dends will always equal the outstanding Notes. It pa losses promptly—during its existence never having tested a claim. It Issues Policies for the benefit of ried Women beyond the reach of their husband's credi Creditors may also insure the lives of Debtors. Its Pol are all *Non-forfeiting*, as it always allows the assure surrender his Policy, should he desire, the Company ing a paid-up Policy therefor. This important fe will commend itself to all. The inducements now of by the PHŒNIX are better and more liberal than tho any other Company. Its rate of Mortality is exceed low and under the average.

Parties contemplating *Life Insurance* will find it to interest to call and examine our system. Policies i payable either in *Gold* or American currency.

Meetings.

NARROW GAUGE RAILWAYS.

A Public Meeting was held in the St. Lawrence Hall, Toronto, on the 13th inst., and for the purpose of considering the propriety of granting a bonus of $250,000 towards the construction of the Toronto, Grey and Bruce Railway, and $15,000 to the Toronto and Nipissing Railway. The Mayor occupied the chair, Mr. Chas. Robertson acted as Secretary. There was a large attendance of the citizens.

Mr. Jas. G. Worts, President of the Board of Trade, rose and moved the first resolution affirming the desirability of the proposed roads in the interests of this City, the districts through which they are to pass, and the Province at large. Mr. Worts proceeded to refer to the gradual growth of the city from a muddy little village to its present proportions. He also dwelt upon the advantage of the existing railways to the trade of the city, and the sums voted by Toronto for their construction, and for building the Esplanade. The city could well afford to give the sums asked, and in proof of that he pointed to the rapid progress in building and the steady increase in the value of property. Hamilton had agreed to give $112,000 in Great Western Railway stock to build a railroad, not into Hamilton, but from Guelph to Elora, and the nearest point of that road would be 40 miles from Hamilton. If, then, Hamilton could afford to give that sum for such a purpose, what could Toronto afford to give for 70 miles of railway north-east and 70 miles north-west, and both terminating in the city? It was estimated that the increase of taxes, resulting from granting the proposed bonuses, would amount to only $1.50 on every $1,000 of assessment. Though the amount was large he, as the largest tax-payer in the city, was willing and glad to give it. He thought the smaller ratepayers would say the same. The money could be raised in Canada, excepting that they would have to go to England for the railroad iron. As a consequence they would not have to send large sums out of the country every year to pay interest, as was the case with other public works. He pointed out, in concluding, that it was the railways of Chicago that made her what she is, giving her such facilities for bringing forward the produce of the country to a shipping port. This trade largely contributed to make her what she was—the largest grain market in the world.

Ald. Manning seconded the resolution, and ably supported it at considerable length. It was then put to the meeting and unanimously carried.

Mr. Wm. Gooderham moved the second resolution, specifying the amount of the bonus, and requesting the Council to submit By-laws to the people, authorizing the appropriation.

Mr. John Crawford seconded the resolution, and argued in support of it at some length.

Mr. John Gordon, of Gordon & McKay, also supported the resolution. One reason he did so, was because the city would be directly benefitted to an incalculable extent, and because the control of them would be left among themselves: to all intents and purposes the roads would be Canadian, raised of money in Canada, for the good of Canada, and managed by Canada men, in Canada. He concluded by urging them to aid the scheme with the subscription asked.

Ald. Medcalf and Mr. John Nasmith spoke in support of the resolution, and Mr. A. Fleming and James Beaty, M. P., against, when, on being put to the meeting, it was carried unanimously.

After three cheers for the Queen the assemblage dispersed.

Mining.

THE STEVENS FLUX.

A correspondent of the Chicago *Tribune* writes as follows :—

Fluorine, one of the components of fluor, and likewise of the residuum from the cryolite, is a gaseous material. Its usefulness in smelting quartz ores has been known in Freiberg for many years, and has been there turned to practical account. Flour spar is found in quite a number of veins in Saxony, and in particular abundance in the royal mine Chur Prinz, near Freiberg. The boys, who break and sort the ores raised from this mine, receive 2½ groschen, about 5 cents of our money, for each hundred weight of fluor spar separated pure from the mineral and gangue. The fluor spar thus obtained is used in smelting, simply and solely in order to volatilize a portion of the quartz in the form of fluor silicic acid ; while the calcium remaining combines with another portion of quartz and forms a slag, which runs or is tapped off. The residuum from cryolite would act in a precisely similar manner and might be used with advantage in smelting certain quartz ores, provided it cost little or nothing ; for many ores it would be worse than useless. Even if it were as useful as its advocates claim, it could not be used with profit, for the simple reason that the cost per ton of its transportation to any of our new territories would alone be greater than the average yield of the quartz. For example, a ton of the flux laid down here in Montana would cost not less than $40, and we can, with such a yield in gold, return a clear profit of at least $25 per ton of ore, and, further, smelting is a process adapted only to those localities where labour fuel and all materials are attainable at the lowest prices, and solely for lead and copper ores. In England, in Germany, and, in general, on the continent of Europe, common labor receives twenty-five cents to fifty cents of our money for a full day's work of twelve hours at the furnaces. In Mexico, likewise, the common laborer is content with 25 cents to 37½ cents per day; good miners receive in the lowlands 50 cents per day; or for three holes, each sixteen inches in depth, and in the mountains 62½ cents, and in rare instances 75 cents for a like amount of work. In none of the above mentioned localities is the cost of living excessive. On the other hand, in California and Nevada miners and mill hands receive from $2.50 to $4 coin per day, and are often hard to be got even at the latter figure. Here in Montana $5 currency is the ordinary per diem, except during winter, when good hands are forced to work at prices varying from $40 to $60 per month and board. Hence it is that all successful mining and reduction have, up to the present time, been confined to such ores as are workable without excessive handling. That is to say,

amalgamation has been successful, and smelting, except for the very richest ores, unsuccessful. California has expended thousands in attempting to smelt such of her ores as could not be amalgamated, and the result has been, in an economical point of view, uniformly unfavorable; technically, the smelting has been all that could be wished for—the metal or regulus has separated cleanly from the slag, and the precious or useful metals have been obtained as perfectly as in any of the European works, but it has always failed to pay. And why? For the simple reason that in smelting, too much handling, too much manual labor was required. This is an obstacle which time will overcome, but in a manner the reverse of agreeable to the laborer. The amalgamation, on the other hand, is almost entirely accomplished by machinery; a few attendants only being required to overlook the tireless stamps and the obedient grinders in the pans. Mines yielding free gold may be worked to a profit in California, under favorable conditions as to size of vein, proximity to lines of easy communication with the great cities, etc., when the yield per ton is only $5; and on the average, in the State, when the ores contain about $15 per ton. Free gold in Montana may, also, be worked to a profit where the average yield is about $15 per ton.

If the metal be locked up in sulphurets of iron, (pyrites), it may be very satisfactorily extracted by roasting and by Plattner's chlorination process, which would not cost, under average conditions, to exceed $20 per ton.

Amalgamating silver ores must contain at least $30 per ton to cover the cost of extraction, and that only where a preliminary roasting is not required. When the latter is the case they may cost from $6 to $10 per ton extra for calcining.

Lead ores, which contain silver, can only be reduced by the smelting process, and must contain at least $60 per ton to pay expenses under the now existing conditions. In the new Teritories, the lead now produced is practically valueless, since the cost of transportation to a market renders competition with the lead regions of the West impossible. This, more than any other circumstance, renders smelting the least desirable. It is true that, by the fire process, there is saved a greater percentage of the precious metals contained in the ore, but, as an offset, there is required a far greater expenditure of labor and a more frequent reworking of the by-products. The amalgamation has, we may say, no by-products which require a reworking. The tailings are frequently of sufficient value to warrant a rehandling, particularly where the ore is rich in sulphurets. These, by the action of the moisture and oxygen of the atmosphere, aided frequently by a small addition of common salt, become decomposed and the contained precious metal or metals then readily lend themselves to the process of amalgamation.

To return, however, to the flux of Stevens. It is stated "that sulphuretted ores, which, by common process, yielded $300 per ton, were by smelting with the cryolite residuum, made to yield $1,400 per ton." The report is not sufficiently definite; it does not state what the common process was: it does not state in what form the gold was reduced nor in what metal, probably lead, the reduced gold was collected. That the gold was obtained at once in a button of the pure metal is improbable, not to say impossible, and the same or greater advantages as a flux might, with better reason, be conceded to pure soda, litharge or borax. Most absurd and illoligical of all is the statement in regard to the 2,500 lbs. of Ackworth ore from the State of Georgia. According to the mint assay, there was contained the sum of $22 per ton, and this miraculous flux succeeded in extracting $431 per ton. In such a case we have a choice between two conclusions; that is either the mint assay was incorrect, or that Colonel Stevens has discovered the true philosoher's stone, and can put gold where nature has not been so accommodating; or to make use of an expressive vulgarism, Colonel Stevens is able to "extract blood from a turnip."

It is worse than absurd to credit the flux with these superhuman capabilities, and the conditions of the experiment are not stated in sufficient detail to render it worthy of more than passing criticism. The report further states that "the flux is efficacious in detaching the gold from the sulphurets of iron and copper, and that to the presence of fluorine is due the remarkable fluidity of the melted mass, which allows the unoxydized metals to sink to the bottom of the crucible in clean detached globules." All this is entirely an error. If the gold be free there is no need or smelting, and if in combination, the fluorine of the flux will not separate it. On the contrary, the fluorine attacks the quartz preferable to the sulphurets, and eliminating one portion of the quartz as fluor silicic acid sets the calcium free to unite with another portion of the quartz to form a slag. The metals, whether free or combined with sulphur, will sink to the bottom, and in the latter case, will form a matter which must be subjected to a new treatment before the precious metals can be obtained free. To bolster up the flux, the name of Dr. A. A. Hays, of Boston is introduced, who indulges in some glittering metallurgical generalities in regard to smelting with the flux, with or without common salt. Dr. Hays is doubtless a good practical chemist; but his remarks in regard to smelting with salt shew an entire misconception of the uses of that material. Salt has been used in smelting sulphurets, and then only with a view to making the matter more easily breakable; the sulphide of calcium formed in the process of reduction, is a deliquiscent body; draws water from the atmosphere, and, as a result, the matter crumbles to powder, at the same time omitting sulphuretted hydrogen. It has always been found too expensive an adjunct to be at all universally introduced; and if too costly where labor is very cheap, it would be still more applicable to our territories, where labor is so high.

In fine, whatever may be the merits of the cryolite residuum, salt, &c., as a laboratory flux, they have only a very circumscribed applicability, and even then would certainly yield the preference to borax or litharge, which, in a far wider sense, may be nominated universal fluxes. Sulphuret, yielding gold well up in the hundreds, are quite the exception, and for such Plattner's chlorination process affords the best and speediest method of reduction. Quite a number of such works are now in operation in California with uniformly favorable results.

Colonel Stevens has made a "mountain of a mole hill," and his so-called discovery might as well, for all practical purposes, be at once "consigned to the tomb of the Capulets."

The Chlorination Process.—This process, which is spreading rapidly in California, and has proved profitable in every case where there was a good supply of sulphurets and management by competent men, is to be introduced in Arizona. A gentleman familiar with the process has gone to erect a furnace at the Sterling mine, near Prescott, and it is reported that a contract has been made that if the rock yields well to chlorination, certain gentlemen of San Francisco shall buy the mine for $80,000. There is a lode, ten feet thick, full of metaliferous sulphurets, and near the surface it yielded a large amount of free gold, as much according to rumour, as $500 per ton. A mill, however, with the common apparatus for amalgamation failed to pay after the decomposed quartz had been worked, and all the attempts made to extract the gold from deep-lying sulphurets have failed. If chlorination succeeds with one it is supposed that Arizona will come right up, for there is more quartz in one county of that territory, than half of California. The gold, however, is found in connection with the sulphurets of lead and Antimony, and will not be caught by the copper plate or quicksilver. The quartz lodes have the same general character throughout the Territory, being highly mineralized.

Mining Laws.—As the Gold Mines have become an acknowledged branch of industry and one of the main sources of revenue to the Province, it behoves the Goverment to foster them in every way by protecting the rights of honest miners and giving increased security and encouragement to investors. Among the improvements which suggest themselves or from time to time have been suggested to us, we enumerate the following, though some of them have been already noticed:

In order to test the depth to which quartz mining may be extended, the Government might meet half the expense of carrying down a shaft to eight hundred feet; the other half being borne by the principal Gold Mine proprietors in the Province.

Now, with an accumulation of evidence in its favour, the prosecuting a deep search in the country is no lottery, but rather a duty owing science and investors; it is more than probable that good paying ore would be met with in the descent which would cover the whole cost of the experiment; and, even, if it did not, the knowledge to what depth the quartz veins may be safely followed is one of such pressing importance that it can hardly be too dearly purchased. To abolish royalty, and sell the land in fee simple or exact royalty from net profits, only. To credit mine owners with the full amount of work executed by them in the Province. A mine owner may have several interests in one field; or in different districts, one of which only, may call for his preference or attention, and though it be that one he may have performed one hundred times more labour than was necessary, he is still liable for a certain amount of work for each of the area not in the same lease. Again, one year's company's means may be absorbed in erecting machinery, building dams, &c., and other costly work; and yet the excess of labour beyond the statute requirements will not be taken into consideration in the next year's account with the Dominion. Not to issue a prospecting license for private lands, until the owner has had fourteen day's notice of the application. Not to issue a receipt for mining leases on private lands, unless the application can show the owner's consent. To encourage prospecting and substantially reward discoverers. The single free claim is often better than a white elephant. To abolish all reserved areas. To have lithographed maps for each district. To appoint a registrar in every proclaimed district, and in the unproclaimed to have, also, an acting deputy commissioner. To publish statistics regularly and frequently. To modify the form of statistics so as to give fuller information. To compel mining records. To institute free search or enquiry at the Mines Department Office. To purchase the best quartz specimens that can be found, and to preserve them in the collection. To engage the professors of Geology at the Provincial Colleges occasionally to visit and report upon the districts.—*From Heathcrington's Guide to the Gold Fields of Nova Scotia.*

Coal Mining.—The Montreal Gazette says:

A company is being formed in this city for the purpose of developing and working a newly-discovered coal deposit at Pictou. This deposit has been examined and favourably reported on by Sir William Logan, and lies along the track of the intercolonial railway, in the immediate vicinity of the intercolonial mine. The capital of the new company, which is to be called "The Pictou," has been fixed at $50,000, and a considerable portion of the amount has already been subscribed for.

—The Huron Copper Bay Company has declared a dividend of 15 per cent for the half year, making 45 per cent for the year, payable on November 1st. Transfer books will be closed from 12th of October to the 4th November.

—New fish rails are being laid on some portions of the Port Hope and Beaverton Railway. The embankment at Galloway Bridge is almost completed.

Insurance.

NSURANCE MATTERS IN MONTRAL.

(From a Correspondent.)

MONTREAL, Oct. 13, 1868.

he Quebec press and the *Daily News* of this ci, are engaged in a controversy respecting the Fi Marshalship of Montreal, arising out of the ac on taken by the Corporation following on the Insurance agents petitioning the Local Govern- t to abolish the office. I send you the pro- eedings taken at a meeting of the Insurance Companies held on Thursday. There were present: M. Wood, of the Ætna, (Hartford,) in the chair; Messrs. Routh, Royal; Johnson, North British Mercantile; Rose, Commercial Union; Forbes, Queen; Stephens, London; Hobbs, Lancashire; Smith, Liverpool and London and Globe; Beaumont, Home and Western; and Muir, of the Citizen. It having been explained that the object of the meeting was to consider whether some combined action should not be taken by the Insurance Companies to discover the cause of the recent numerous incendiary fires, and to endeavour to put a stop to the same. After the consideration of the subject, it was

Resolved,—That a reward of $500 be offered by the Insurance Companies doing business in this city for such information as will lead to the arrest and conviction of the party or parties who have been guilty of the late acts of incendiarism.

Resolved,—That a petition be sent to the Corporation of this city praying that early action be taken by them on Dr. Benard's motion relative to the Fire Marshal passed by the City Council on the 2nd instant.

Resolved,—That, in view of the recent numerous evidently incendiary fires which have taken place in this city, and the total failure of the investigations under the Fire Marshal Act to discover the incendiaries, the Insurance Companies do petition the Legislature of Quebec, praying that the office of Fire Marshal for the City of Montreal be abolished.

Messrs. Wood, Forbes, Johnson and Smith were named a Committee to carry out the above resolutions.

The action of the Corporation in this matter may be excused, but that of the Insurance Agents cannot either be excused or justified, I feel certain, however, that the Government will not stultify themselves at the instigation of those who have themselves done so. I believe a change will soon be made by Mr. Austin's retiring from the office he has found himself so incompetent to fill. Should such be the case, I believe that Mr. Perry and the officers of our fire brigade, are disposed to assist the coming man, which they certainly have not been with the present incumbent.

Since my last, incendiarism has not been so frequent, one stable only, containing 9 horses, was fired on Tuesday, 6th inst., but was extinguished with slight loss; the same premises were attempted with like result on the 7th, and on the 8th a successful attempt was made, by which the stable was burned, but the horses were all got out, however, before several of them were injured by smoke.

On Friday a fire occurred on the premises of the I. B. Smith, a crockery store on St. Paul street; at first it was feared it would be a total loss, but thanks to the efficient Water and Fire Departments, it was got under with a loss of less than $4000. The stock was insured with the Ætna and some other American company, and the Western, of Canada. The Citizens' lose about $6000 on the building. The executors of the late were so pleased with the exertion of the Fire Brigade that they sent them a cheque for $100. The London and Liverpool and Globe, with the North British, suffered to the extent of $2000 upon a small steamer, *St. Marie*, partly burnt a few days ago near Quebec. The "Royal" and "Commercial Union" had a narrow escape from being in for a heavy loss at J. Hudson & Co.'s, wholesale grocers, on the night of the 9th instant. It appears the gas bracket got out of order, by which the light communicated to the connecting pipe, which melted and receded, burning up between the lath and plaster partition. Fortunately it was early discovered, and by the timely arrival and exertions of the Fire Brigade, it was got under at a loss of about $100. The stock of goods on the premises was valued at over $100,000.

Insurance business suffers much from unfair competition and want of principle on the part of the agents of some Companies. A risk of $20,000 on the Rubber Works in this City was taken from one Company by another at a reduction of premium amounting to over $40. This is a sample of the way business is generally done here.

Our Fire Department have completed the monument in the Mount Royal Cemetery. I will furnish you with some particulars of it in my next. The Corporation have followed the course of the Insurance Companies, and offer $500 reward for the detection and conviction of the perpetrators of the late acts of incendiarism. To my mind, the Insurance Companies would have done something in earnest, had they employed one or two efficient detectives to fish out the parties; but this might have interfered with the per centages of some agents who have to pay all their expenses out of their commissions.

MARINE RECORD.—Kingston, October 8.—The Schooner Defiance, lumber laden, from Toronto, bound to Ogdenburg, went ashore on Snake Island reef near this city, during the gale this morning. The tug has gone to her assistance, and it is thought she will be rescued from her present dangerous position with but slight damage. It has since been learned that she will prove a total loss, and is insured.

PICTOU, Oct. 8.—The schooner Fulton, from Toledo to Ogdensburg, loaded with 220,000 feet of black walnut lumber, sprang a leak and was waterlogged abreast of Nicholson's Island in the gale of last night. She is now at anchor in South Bay. A tug and lighter, and steam pump, have been sent for.

PORT COLBORNE, Oct. 8.—The barque Arabia, of Kingston, loaded with wheat, for Kingston, went ashore, during the gale this morning, behind the east pier. There are two feet of water in her hold now: the prospects of getting her off are good. This vessel has been got off without serious damage.

DUNVILLE, ONT. Oct. 8.—Schooner A. P. Wait will be a total loss; cannot get to her assistance with a tug. She will pound to pieces on the reef. She was coal laden, from Cleveland to Toronto.

COLLINGWOOD, Oct. 10.—The schooner John Drake, with cargo of corn from Chicago, W. H. Brice commander, reports that to the eastward of the Ducks, about 15 miles, a black fore-and-aft schooner steering for Love Island is supposed to have founded on Wednesday morning during a heavy westward gale. She was within half a mile of the Drake, carrying away bulwarks and boats, and in an hour after daylight appearing nothing could be seen of her from the mast-head with the glass. She carried three jibs, and was about a 13,000 bushel vessel: appeared heavily laden.

PROPELLER PERSEVERANCE.—The propellor Perseverance, which was destroyed by fire off Putneyville, on the morning of the 6th inst., some particulars of which we gave last week, was a craft of 632 tons burthen, old style, being built in 1864, at St. Catharines, by L. Shickluna, rated A 2, valued at $40,000 and was the property of the Welland Railroad Company.

MARINE DISASTERS.—The following list of disasters to American shipping on the lakes we clip from some of our American exchanges:—

The schooner Coaster is reported ashore at Grand Haven.

A Milwaukee telegram says that the schooner Glen Cuyler was struck by a propeller and sunk on Thursday night. She was freighted with wood.

The schooner W. C. Grant, grain loaded, had her small boat, topsail-yard, mainboom and mainsail carried away when about sixty miles from Milwaukee. She put back to the latter port.

The schooner Colonel Glover, bound from Muskegon to Racine, lost about 20,000 feet of her deck load of lumber during the passage across the lake. The Captain entered a protest at Milwaukee, and then cleared for his destination.

The schooner Jennie Mullen a few days ago in the Chicago river was slightly damaged. She cleared for Muskegon for a cargo of lumber, but returned minus her mainboom and mainsail. Her centre-board was also damaged,—the result of heavy weather.

The Milwaukee *Sentinel* of the 9th has the following disasters:— "The schooner Wm. Arbuckle, of Racine, lay at the Wolfe River pier during the storm, and was severely injured. Her starboard quarter got caught under the pier and was so badly wrenched that it has dropped fully one foot; several holes were stove through the outside planking, and several frames and every stanchion on the starboard side broken; her stern timbers are also started from the transom. She arrived here yesterday morning in a leaky condition. Her damages are upwards of $1,000.

"The new schooner Bessie Boalt weathered the gale at the same pier. She lost some timber heads, and had her rudder post started and the rudder broken from its fastenings.

"Another vessel, whose name is not given, lost some timber heads and a portion of her rail at the same place. The pier, of course, did not escape without severe injury.

"The schooner Spy, bound from Sheboygan to this port with a hole full of wheat and a deck load of pork barrels, commenced making bad weather when off our north point, Tuesday night, and was obliged to jettison the barrels, 500 in number, after which she succeeded in finding a lee and weathered the storm without further mishap. She arrived here on Wednesday evening. Her grain sustained no damage. The barrels were worth upwards of $700. "All efforts to release this vessel from her unpleasant position just inside of the barbor piers have thus far proved fruitless. The united efforts of the powerful tugs Admiral Porter and American Union, yesterday afternoon, failed to start her an inch. Several hawsers were parted in the attempt to pull her off. Last evening a dredge was at work digging a channel alongside of the vessel.

"The propeller Idaho, bound down with a full cargo, undertook to leave our harbor about midnight, Wednesday, and run aground in the jaws of the piers. The sea soon swung her athwartships the harbor, her bow heading north and her stern pounding heavily against the South Pier. Her rudder, shoe, and stern-post were carried away, and had it not been for the timely assistance rendered by the tug Tiffit she would no doubt have pounded a whole into her hull and sunk. She was brought into the river about 2 a.m. yesterday."

A despatch received from Buffalo states that the bark H. P. Baldwin has arrived at that port with about one-half of her cargo of corn in a damaged condition.

The bark Golden Fleece, which got aground at Chicago is still hard on. The schooner Champion was keeping her company. The schooner Annie Vaught, which was aground near these vessels, was got off and towed to her dock, for the purpose of discharging her cargo of lumber.

The bark Homer in endeavouring to make the Chicago harbor on the 10th went on the bar, but was got off in the afternoon by the tug Geo. W. Wood without damage.

The schooner Blue Bell, which went ashore at Grand Haven, on Tuesday night, is well up on the beach, and it is thought she has broken in two. She measures one hundred and fifty tons, old style was built at Huron, by Bates, in 1844, received large repairs in 1861, and rates C. 1.

The schooner Forfar, which went ashore off Muskegon at an early hour on the 8th, was a craft of 170 tons burden, rated B. 2 was built in the year 1855, received a general overhauling in 1865, and was the property of James Bowen, of Chicago. She was valued at $600, and insured for $3,500.

The bark City arrived at Marquette on Oct. 9th in tow of the tug J. C. Morse, with her jib-boom, dolphin-striker and a spritsail-yard carried away. She was run into by the Morse in the De our Passage, a heavy gale blowing at the time. The tug was but slightly injured.

The Detroit *Free Press* of Thursday, says: "The owner of the schooner Glad Tidings received intelligence of that vessel being ashore on the north side of Lake Erie and near the Rond Eau. The Tidings, at the time of the disaster, was taking on a cargo at a landing near that place, and had completed her load, but while attempting to get under way was driven on the beach. The shore thereabouts is favorable for getting her off, which will doubtless be the result without damage to the vessel. She is owned by D. Whitney, Jr., in this city, and is comparatively a new vessel. Some miles further down the lake a vessel is reported also ashore and full of water, supposed to be a Canadian craft. Her name we could not definitely ascertain, no further than that she hails from Lake Ontario, and, at the time, was loading timber. What her prospects are for getting afloat was not stated. The Magnet has gone to the schooner Tidings.

"The propeller Fountain City, which grounded on Beach Island, was got off yeeterday morning by the propeller Atlantic, and arrived here. The nature of the damages sustained we were not informed. The schooner Juliet, by an awkward display of seamanship, mistayed yesterday, and came foul of Pittman's dock, doing more or less damage. The wrecker which left here a day or two since to visit the wrecks of the schooners Byphen and Contest, returned yesterday with the steam pump recovered from the former vessel, and the outfit of the latter craft. No bodies were discovered, though it is apprehended they have come to the surface and drifted out into the lake."

Fire Record.—Thornhill, Oct. 3.—The house occupied by Mr. Gordon, in the village of Thornhill, was consumed, together with the premises on the north adjoining, occupied by Archibald Campbell, tinsmith. Mr. Campbell had no insurance on his property, and will lose considerable; both the shop and dwelling house were his own property, and were entirely consumed.

Augusta, Ont., Oct. 3.—A fire originating in an out-house extended to the two barns, hophouse and stable of Mr. Shoecroft, near this village, which with their contents were consumed. Partially insured, and loss heavy. The cause is supposed to be incendiarism.

St. John, N. B., Oct. 2.—Two houses on Pond Street owned by Mr. McCarthy and Mr. O'Keefe, and occupied by themselves and tenants, were destroyed by fire; and the building adjoining, on the corner of Pond and George Streets, owned by Mr. Campbell, was considerably damaged.

Whitby, Ont., Oct. 7.—Mr. James Forsythe lost by fire two hundred loads of straw. Another large stack owned by Michael Tierney, was also burned at the same time. Total loss about $400; no insuranee. It is said that a little boy thoughtlessly set the stacks on fire.

Toronto, Oct. 13.—A fire originated in the outhonses of Richardson's grocery store, corner of Terauley and Albert streets, but was extinguished before much damage was done to the store. The property, which was the property of Mr. C. Fisher, weighmaster, was damaged to the extent of $400 or $500. Insured in the Liverpool and Home Distriet for $2,000.

Lindsay, Oct. 12.—About half-past ten o'clock on Sunday night, Mr. Cullis' flour mill and house in Mariposa, were destroyed by fire. Loss about $10,000. The origin of the fire is unknown.

DANGERS OF LAKE INSURANCE.

The season of 1868, even so far, has not been a favorable one, and the great bulk of the lake losses are yet to come. October, and specially November are the disastrous months on our inland seas, against which the summer should have laid up its accumulated profits, on which to draw for the heavy losses that invariably attend the closing season. No such accumulations have been garnered this year, and there is no human probability that the companies can end the season without serious average loss. We beg leave, therefore, to suggest a few conservative ideas, which, if heeded, may break the force of the blow that is in reserve for the companies doing a lake business.

The Presidents themselves should take this matter in charge, and with a strong hand overrule agents whose tendencies are at all towards malpractice. The points needing particular attention are Lines, Re-insurance, and rates:

I. Lines.—There is a large amount of property to be transported before the end of the season, and there will be plenty of business for every company (although there never is enough for every agent). Lines, therefore, should be rigidly restricted to such minimum as each company may fix, and no departure from that sum permitted under any circumstances.

II. Re-insurance.—The practice of accepting large amounts and re-insuring excesses is a pernicious one. It is opposed to all principles of sound underwriting, and is one of the most fruitful causes of grasping competition among agents. It should be broken up at any cost, and the rule adhered to without deviation, that each company will accept only such lines as it can carry alone. It is absurd to assert that the business cannot be conducted on this plan; a schooner afloat can be managed quite as readily as a warehouse ashore; and it will be, as soon as each company will say resolutely that it will neither grant nor accept re-insurance.

III. Rates.—There is no safety in cutting the rates at any time, and particularly in October and November. The printed tariff of the late Lake Association should be inflexibly adhered to, and, even at those figures, it is not probable that the premiums of the coming sixty days will equal the losses.

Nevertheless, as before remarked, the force of the November gales upon the companies may be broken by an adherence to full rates, moderate lines, and direct insurances. Will they heed the warning?—*Monitor.*

Railway News.

Great Western Railway.—Traffic for week ending 25th Sept., 1868.

Passengers	$59,935 14
Freight and live stock	41,633 03
Mails and sundries	2,115 65
	$103,683 82
Corresponding Week of '67.	90,393 29
Increase	$13,290 53

Northern Railway.—Traffic Receipt for week ending Oct. 3, 1868.

Passengers	$4,989 16
Freight	9,150 27
Mails and Sundries	1,552 63
Total Receipts for week	$15,692 06
Corresponding week 1867	16,271 66
Decrease	$579 60

Contract.—The *Witness* learns that the proprietors of the Montreal Car Wheel Works have received a contract for nearly 800 wheels for a New Brunswick railway, of the kind called "change gauge," because they can be shifted on their axles to suit either the broad or narrow gauge railways.

Merchants' Union Express.—We learn from the Cincinnati *Commercial* that, after four weeks' spent in negotiations, the Merchants' Union and the American Express Companies were recently consolidated. The new company is to draw the same percentage from the general revenue that both do now. The object of the consolidation is to reduce competition and economize in management. It is claimed that this arrangement will bring dividends to the stockholders—something they have not seen for the past two years.

Rivere Du Loup Railway.—The Montreal *Gazette* refers to the rumor about closing the Rivere du Loup railway, as follows:—The City of Quebec papers, both French and English, have been very much exercised about some statement that the Quebec and Richmond and Rivere du Loup sections of the G. T. R. are to be closed during the coming winter. We have never heard anything about this, and what is more, we doubt if the managing officers of the railway have either. The excitement is in fact all about nothing; or if not about nothing, it may arise from the consciousness of our friends in the sister city that the portion of road referred to is the least productive of the whole of the Grand Trunk system, and does not pay for the expense of keeping it open in winter. But now that something is to be added to the extreme eastern end, it should occur to our contemporaries that this is not a time at which to be closed.

The Southern Railway.—The St. Thomas *Dispatch* says: We believe that those interested in the construction of the Great Southern line of railway will shortly hear good news respecting the negotiations carried out for organizing a company influential enough to secure the co-operation of American companies, and the subscription of sufficient capital in the English market to construct the road and equip it with stock.

—New Station builings have been erected by the Great Western at Paris. It is the intention to establish a wood and water depot at the station, a lot of land having already been purchased with that view, reaching down to Smith's Creek, whence the water will be thrown by hydraulic power into tanks at each end of the yard; so that in the event of a fire occuring at any future time there will be an abundance of water on hand to extinguish it, as well as to supply the engine.

Notice to Shippers of Seamen.—Mr. Joseph Starr, Ship Broker and Commission Agent of Halifax, writes to the press to warn parties interested against the practice of getting seamen, shipping from Colonial ports to ports in the United States and thence to any other port for which the vessel might get a charter, to sign shipping papers on board the vessel. The U. S. Courts hold that articles so signed are not binding. Mr. S. cites the case of a Pictou vessel which shipped a crew at that port for a round voyage. On the arrival of the vessel at Portland, U. S., one man claimed and secured his discharge owing to the fact that he had signed articles on board the vessel. The decision of the Courts is for the purpose of preventing Captains from getting men on board their vessels while intoxicated, and obliging them to sign articles for a voyage and on terms, which when sober they would not bind themselves to. *Exchange.*

Launches.—The Owen Sound *Advertiser* remarks:—On the 17th of September the new screw steam tug Okours, built and owned by Mr. D. of this town, was successfully launched. She is intended for rafting and general purposes on Georgian Bay. On Saturday, the 28th ult., she made a trial trip, which gave entire satisfaction, running two and a half miles in ten minutes. Her dimensions are sixty-five feet length over all, thirteen feet beam, depth of hold three feet. She is propelled by a sixteen-inch direct-acting high pressure engine.

European Assurance Society.

Established.....A. D. 1849.

Incorporated.....A. D. 1854.

apital ..... £1,000,000 ..... *Sterling.*

Annual Income, over £330,000 Sterling.

HE ROYAL NAVAL AND MILITARY LIFE DEpartment is under the Special Patronage of

Her Most Gracious Majesty

THE QUEEN.

The EUROPEAN is one of the largest LIFE ASSURANCE Societies, (independent of its Guarantee Branch), Great Britain. It has paid over Two Millions Sterling, Claims and Bonuses, to representatives of Policy olders.

The Society have appointed the undersigned to be their gent for the Dominion of Canada.

Assurers are requested to pay their Renewal Life Premms as hitherto, either to him direct, or through any of various Agents of the Society in the country.

EDWARD RAWLINGS.

Chief Agent European Assurance Society, Montreal.

Agent in Toronto,

W. T. MASON,

15-1yr ONTARIO HALL.

erkshire Life Insurance Company,

OF MASSACHUSETTS.

MONTREAL OFFICE:

0 *GREAT ST. JAMES STREET.*

INCORPORATED 1851.—SECURED BY LAW.

AMOUNT INSURED .....$7,000,000.
CASH ASSETS .....ONE MILLION DOLLARS.

$0,000 deposited with the Receiver General of Massachusetts for the protection of Policy holders.

ANNUAL INCOME.....$500,000.

100,000 divided this year in cash amongst its Policy holders.

Montreal Board of Referees:—Hon. Geo. E. Cartier, Minister of Militia; Wm. Workman, Esq., President City Bank; Hn. J. O. Bureau, M.C.S.; E. Hudon, Fils & Co.; John France, Esq., Merchant; James Ferrier, Jr., Esq., Merchant; Edward Carter, Esq., Q.C., M.L.A.; C. D. Proctor, Esq., Merchant.

Examining Physicians:—J. Emery Coderre, M.D., Professor of Materia Medica, &c., &c., of the School of Medicine and Surgery, Montreal, and of the Faculty of Medicine of the University of Victoria College; William Wood Squire, A.M., M.D., Graduate of McGill College; Francis W. Campbell, M.D., L.R.C.P., London.

For a sufficient test of merit we beg to state since the commencement of this old and reliable company in Canada, we have had the pleasure of insuring members of Parliament, some of the leading legal talent, and amongst numerous others, several of the leading merchants in this city.

This Company was the Pioneer Company of the non-forfeiture principle, and still takes the lead for every Policy issues is non-forfeitable after one payment. The Company is now erecting a new stone building, five stories in height, at the cost of $100,000, similar to the Molson's Bank of this city, but of much larger capacity, having 75 feet front, and 116 feet depth, containing three Banks, the Express Offices, and the Post-Office, yielding about $30 income, annually, all of which is the accumulating property of every Policy-holder.

The Company has issued nearly 2,000 Policies since the 1st January, 1867, which is the largest number, in comparison to the expenses, of any Company in Europe or America.

Such are the Results of the Cash System.

Full particulars, history of the Company, Rates, &c., can be obtained at the Managing Office for the Canadas.

EDW. R. TAYLOR & Co.,

20 *Great St James St. (over Pickup's News Office)*

WANTED, by a first class English Life Assurance Company, a person of experience and ability, to act as Travelling Agent.

References and testimonials, as to ability, will be required.

THURSDAY, OCTOBER 15, 1868.

INSURANCE COMPANIES AND LITIGATION.

One of the morning journals recently published some remarks which reflected on Insurance Companies for taking advantage of technical objections to defeat claims under their policies, and made a few vague comments on a case in which the BEAVER MUTUAL was concerned at the Barrie assizes. There is no reason why public companies should not be allowed the same privileges as individuals in our Courts of Law; but this we do know, that a prejudice exists against Corporations of all kinds, so strong that juries do oftentimes stretch a good many points to favor an individual when the contest lies between him and a Corporation. In fact, a Corporation when it does battle against an individual, need expect no mercy. A great many reasons might be urged against the cultivation of such an unjust prejudice, and public journals should not lend themselves to the unworthy task of encouraging and strengthening it. We are prepared to admit that some Companies, or rather Managers, have a morbid taste for technicalities, but such supplies its own corrective. The reputation acquired by those who are fond of plunging into litigation is neither enviable nor profitable, and Insurance Companies properly managed rarely find themselves called on to exercise acuteness in discovering holes out of which to creep. An Insurance Company cannot, for its own sake, afford to become litigious, as it has not only a deep rooted prejudice on the part of juries to contend against, but also the keen watchfulness and tell-tale tongues of its rivals. Much less can it afford to be given to technicalities, for what it gains from success on questionable grounds it loses tenfold in popular estimation. The real fact is that no institutions are so liberal, or so often called upon to waive technical objections as Insurance Companies. The despotic terrorism under which they exist restrains them from construing their contracts with too great nicety. The nature of the business they do, their dependence on public favor, and the desire on the part of their agents to extend operations, are so many preventives of undue harshness. Of course there are exceptions in this particular as in every other, but the general rule is as we have stated.

Insurance Companies may be a great boon, or a great curse to a country. It is hard to say whether the advantages they confer in the protection of the honest and industrious, are not counterbalanced by the great temptations to crime they are the means of begetting. Their readiness to yield their rights amounts to a positive fault in many instances, and has given rise to a species of despotic exaction which has attained, through custom, almost the dignity of law. The alarming increase in the number of cases of incendiarism and arson of late years, can be traced to no other cause than the facilities afforded for escape from the consequences of such crimes by the conduct of Insurance Companies themselves.

Their inconsiderate settlement of losses without adequate inquiry; their patient submission to palpable fraud; their rash haste to acquire a name for "prompt payment;" their timid shrinking from the maintenance of their rights; their supineness in securing the punishment of crime, have produced evils which should alarm every lover of his country. When fraud obtains the upper hand, and crime runs riot without check, public morality must suffer. Viciousness overawes virtue, and the honest poor, seeing their less conscientious neighbours grow rich by crimes in which large Corporations apparently acquiesce, are only too apt to give way to that kind of logic which now obtains in the jury room, when a Corporation attempts to defend itself against a demand of any kind, whether just or unjust. The degeneracy of the times is a source of frequent complaint on the part of the social philosopher. The rapid increase of incendiarism and arson is terrible to think of. The stab of the assassin may seal the doom of one victim, but who can sum up in a word the awful guilt of the wretch who, at dead of night, applies the torch to his own or his neighbour's dwelling; who exposes to the most terrible of deaths the innocent and the harmless; who, at one swoop, devours wife, child and home, and leaves a broken-hearted desolate one to go through life heavy-laden

with the woes brought upon him by a fellow-being whom he never wronged. He who stands between such a criminal and swift punishment does injustice to himself, to his family, to his neighbour and to his country.

That many of the fires which occur are the result of deliberate intent, we firmly believe, and to frustrate the designs of such as become criminals with that intent is, we hold, not only the duty of Insurance Companies but the interest of the public. If another man's house adjoins mine I have to pay more for insurance than I would have to do if my house were isolated. The connection of the two renders the risk the greater. If my neighbour sets fire to his house to secure his insurance money he may gain his object, but it will be doubtless by destroying my property. Have I no interest, then, in keeping him honest? The object of punishing crime is to deter others from attempting it. Is it not a duty I owe to myself, therefore, not to take any higher ground, to assist in furthering the ends of justice to the utmost of my power?

The ends of justice are certainly not furthered by pandering to popular prejudice, the offspring of ignorance, or laying blame on a class when one member only may be at fault. Nor are the ends of justice furthered by condemning a company for taking a certain line of defense, the reasons for which are unknown. In this very Beaver case, the real defence was, that plaintiff had set fire to his own premises, after having encumbered both real estate and chattels beyond their value, without notice to the company, and the defendants, if convinced that their grounds of suspicion were good, were perfectly justified in resorting to every means to defeat the claim; not only so but they were, we consider, bound to do so. However, as the counsel for the company has explained he did intend to go fully into the merits of the case were it not that the cause was at the foot of the docket and the presiding Judge, having to adjourn the assizes, could not spare so much time as a full examination of witnesses would have occupied. As the defendants were thus cornered up, they were driven to insist on objections of a technical character which placed the plaintiff out of court.

It will be found in nine cases out of ten in which insurance companies are concerned when technical objections are taken, that there is good and sufficient reason for so doing owing to the injustice of the claim. Often times a company cannot fasten the crime on a claimant although there is not a shadow of a doubt that he wilfully destroyed his premises. In such cases what are the companies to do? Are they to pay the claim and set a premium on crime, or are they to muster courage enough to resist payment and thereby be heralded before the public as litigious? Even judges do sometimes give utterance to comments on cases in which insurance companies are concerned, which comments are not only uncalled for, but also unjust if all the facts were known. A case came within our own observation in which a Judge soundly berated a company for defending an action, and only stayed his criticism when informed by a learned brother by his side, that the plaintiff had been sent to the Penitentiary by that learned brother's own sentence for the crime of arson. In that case the objections relied upon by the defendants were technical, but their real defence was, that the plaintiff had set fire to the house covered by the policy. The gist of the matter is this. We have no excuse to offer for a company taking an undue advantage under a technicality where there is no *bona fide* defence, or litigating a claim where escape from liability would be unjust. But we do say, that to condemn a class for pursuing the opposite course, or to injure the many for the faults of one, or even a few, is not expedient from a public point of view, nor just from a private one.

If the form of monthly statement returned to the Government were to distinguish between loans effected and maturing in Canada, from those maturing in the United States and England on some such plan as that indicated by Mr. Hogan, of the Bank of Toronto, in his elaborate and able answers to the inquiries of the Senate Committee last session, we should have full information as to the Bank of Montreal's operations in New York.

THE MONTREAL FIRE MARSHALS.

The Montreal City Council has decided to petition the Local Legislature for the abolition of the office of Fire Marshal, and the repeal of the Act creating it. We do not wonder that public indignation has been aroused by the improper use that has been made of the Act in the appointment of incapable officials, and the large increase of incendiary fires since the marshals were installed. No one supposes that these officers are guilty of fire raising though opinion is not so favourable to their deputy but it seems to be generally conceded that a more useless pair could not be secured for love or money than the two men who enjoy the dignity and emoluments of the Fire Marshalship. If the act is defective, and it is acknowledged on all hands, that it is, let it be amended; if the present incumbents are useless or worse let them be removed but to repeal the Act altogether does seem to savor of absurdity.

CANADIAN MONEY IN NEW YOR

At this season, when the circulation of banks is at its highest point, it is usual those institutions to remit to England in ticipation of January balances. This co is the safest, and ordinarily the most pr able, as exchange is lowest in the fall highest in the winter. The Toronto *graph*, in a telling article, draws attention the authority of the New York *Post*, to startling fact that Canadian Banks are u funds, to the extent of six millions of dol in the New York Gold Market. The Canadian bank likely to engage in such ulations is the Bank of Montreal. Some ago we traced this practice home to bank, and pointed out how it was indu in at a time when the other Canadian b were contracting their discounts to the imum by reason of the working of the vincial Note Act, and when the needs of country were the greatest. The Ban Montreal is the financial agent of the ernment of Canada, and if the people's m is to be withdrawn from this country used for speculative purposes in the York Gold Room, Canada is certainly bl and may consider itself fortunate in enabled thus to contribute to the divid declared by the Bank of Montreal. bank's charter was intended to cover a l mate banking business in Canada. being the case, these speculations in York are certainly without its true sphe

We suppose the bank lends gold t speculators in the Gold Room, to be r within a certain period, United States b being received as security, with a pow sell, and a margin allowed for a fall. rate given by operators for the use of varies, of course, with the demand, ra from one-eighth to even three-quarter cent. a day. This is rather a heavy ra interest, and the fact of its being paid p that this class of customers is not to b sired by a bank wishing to do a legiti banking business.

PEAT AS FUEL.

There are three primary necessarie human existence—meat, drink and wa In a civilized state of society all these to be produced by human skill and la It is true, our flocks, herds and the pr tions of the field give us the first; nat its countless springs, streams, and river second; and the forests, coal deposit peat beds yield the third; but still the of man is required to utilize the abu resources that nature provides.

In primitive times the forests suppl sufficiency of fuel for the wants of s

at the lowest cost; as civilization extended, they gradually disappeared rendering cheaper and cheaper substitutes for wood necessary. In England, coal has chiefly supplied the place of wood, for there it exists in such abundance as to force all other articles of fuel out of the market. But in those countries, where coal is not indigenous, peat has, generally, been found in large quantities. For hundreds of years the vast peat beds of Ireland and the north of Germany have supplied fuel at so cheap a rate, that searching for coal has been a needless task, even supposing that such existed. In Canada, where the highest authorities have denied the existence of coal deposits, it has become a work of imperative necessity to cultivate the resources that nature has kindly given us. There is not the slightest doubt of the existence of vast beds of peat in many sections of the Province, and that it will take little time and trouble to discover them. But how are these to be turned to profitable account? This important problem is being solved; in various parts of the country Peat Companies have sprung into existence, and if they prove successful we may look for many more.

There are at present three organized companies for the manufacture and sale of peat as fuel, the oldest and most extensive of which is the "Canada Peat Manufacturing Company," next comes the "Anglo American Peat Company," and lastly, a company formed at Sorel.

Peat is undoubtedly the parent of coal, the latter having been formed by the pressure of superincumbent layers of heavy strata of rocks on the once soft beds of peat, which lain over a large portion of the earth's surface; pressure and the internal heat of the earth gave to the coal beds their hardness, and at the same time condensed the combustible gases within certain prescribed limits. This transformation took place especially in those countries which have been exposed to high volcanic action; but, in other sections, where the operations of nature have been slower, the result has been the formation of the vast peat beds which we find distributed over most parts of the world, and which possess, in a diffuse degree, the chemical composition of coal.

Peat is a sponge-like substance composed of aquatic plants, mosses, grasses, and a variety of shrubs and low trees, with the roots, leaves and branches in a state of decomposition, exactly in the same place and position in which they have grown and accumulated for ages. It is therefore an entirely vegetable compound, containing no extraneous matter, except such as may have been washed into it by floods and rains. There are two sorts of peat. One called the *Black*, which is found on the sides of hills and mountains in Ireland, which, when cut and dried, becomes exceedingly hard, and without any manufacturing process whatsoever, makes excellent fuel. The other sort is *Red* peat, which is the only description found on this continent; it grows abundantly in all shallow pools, lakes or basins, where there is no outlet for the water. When cut from the bog and dried, red peat is very light and loses only some forty per cent. of its bulk by shrinkage, but by evaporation it parts with about eighty to ninety per cent. of its weight. As cut from an undrained bog, peat contains but very little solid matter; and to manufacture one ton of fuel, it is necessary to dig from six to eight tons of the raw material The great difficulty consists in getting rid of the immense quantity of water; and from the earliest times of peat manufacture, all sorts of mechanical contrivances have been resorted to, but so far without fully accomplishing the object, or if successful in doing so, it has been at a cost, which has prohibited its general manufacture as an article of commerce. But to thoroughly prepare it for the market, a further process than the mere expulsion of the water, is required, as red peat still retains its sponge-like character, has a great tendency to expand, readily absorbs moisture, and would not stand the blast of a furnace. The further process is performed by *pulping*, so as to entirely destroy the fibre or tube-like character of the innumerable rootlets of which it is principally composed, and this must be done before it is subjected to the action of the atmosphere, or dried to any considerable extent. When this operation is properly performed, the pulped mass is left to dry by natural evaporation, and it becomes dense and hard in proportion to the quality of the bog from whence it is obtained. The result is a fuel of the purest character, equal to the best and hardest burned coke, in fact in some respects preferable, as peat fuel, when well manufactured and dried, does not readily absorb moisture, even when exposed for some days to the wet; this has been proved by the immersion of a piece of peat in a pail of water for two hours, when the absorption was only 3½ per cent., not equal to that of coke if exposed to a heavy shower of of rain, and little more than that of small coal.

The material question with which we have to deal is the cheapness with which it can be supplied in comparison with wood and coal. It is established beyond a doubt that for every practical purpose of heating it can be used to advantage. Firstly, for railways. As locomotives are at present constructed, the waste of steam power to create a blast or draft is enormous, it being estimated that about two-fifths of the whole quantity of fuel is expended for that purpose. Now, well dried peat requires but very little draft through the furnace bars; owing to the immense quantity of gas it evolves, it is necessary for its complete combustion to admit the air through the furnace door, and when the furnaces are altered to meet the requirements of peat fuel, at least twenty per cent. additional power will be given to all peat burning engines, or a corresponding decrease in the quantity of fuel used, will be effected. In proof of this we may state that the Grand Trunk R. R. experiments have all proved so satisfactory, as to result in a contract with the Canada Peat Company, extending over five years or seasons, during the first of which the G. T. R. are to take 100 tons per day, and during the four succeeding seasons 300 tons per day. That all railways will eventually use peat is certain, as it is found by experiment to be cheaper and better than any fuel at present in use, and the only reason they have not more generally adopted it is, the difficulty of making it in sufficient quantities. One ton of well dried peat is fully equal in heating power to one cord of best hard wood. Another great advantage is that no sparks issue from the smoke stack of a locomotive, even with the present enormous blast, and when the furnaces are specially adapted for it, fires from sparks will be unknown; a most important consideration in our hot and dry summers. For many years, even at a very increased rate of production, the railroads will absorb the bulk manufactured, so that it may be some time before it becomes an article of general domestic use. But even supposing such should not be the case for years, the effect of its large production will be to decrease the price of other fuel, especially wood, as every ton of peat used by either railway or steamboat is the saving of one cord of wood. If we estimate the enormous consumption of wood for railway and steamboat purposes, and the rapid way in which the forests are cleared in the neighbourhood of all stations, we can estimate the advantage the introduction of any new and cheap fuel will be. Take Montreal, for instance; the consumption for domestic purposes alone, per annum, is about 100,000 cords of wood, and 60 to 70,000 tons of coal. Every year our wood dealers have to go further and further back to obtain their supplies at a greatly enhanced cost, and the railroads which we at first welcomed as the means of giving us cheap fuel (they running through large wood districts), have proved the very means of enhancing the value. They will not bring it cheaply to market as that would ultimately increase the price for themselves, and therefore every ton of peat consumed by them represents a cord of wood

set free for the markets of our towns. So much for the advantages accruing to the country generally by the use of peat on railroads. There is another branch of business for which it is admirably suited, viz., in all iron and smelting works. A trial was made at the Rolling Mills of Messrs. Morland, Watson & Co., and the specimen bar was equal to the very best Swedish iron. This trial was made in a furnace adapted to the use of coal, without any alteration; had such been made a large saving of fuel could have been effected. With the blast furnaces as at present constructed, peat could not be used alone, but by mixing it with Pictou coal an iron could be produced equal to the best charcoal iron, and superior to any description at present imported. With the extension of the manufacture of peat, this important use of it will doubtless attract the attention of our large iron workers. Of the value of peat as a domestic fuel the experience of centuries certifies in its favor, and its large introduction is a mere question of time.

This article is already so long as not to admit of any further remarks as to its mode of manufacture, or the quantities at present made.

WOODEN RAILWAYS.

There are many parts of the country that suffer from a lack of railway facilities, without any prospect of bettering their condition in that respect, unless they can secure a road less costly than an iron railway. The advantages to be derived from wooden railways seem to have impressed themselves very forcibly on the minds of such as have taken the trouble either to inspect the wooden railways at work near the United States' border or to go through the estimates and calculations furnished respecting their cost, working expenses and earnings. Lines of wooden railway are "projected" in both Provinces, Quebec and Ontario; in the former, there are three in embryo—from Lennoxville to Lake Megantic; from Arthabaska to Upton, and from Quebec to Gosford; in the latter, from Meaford to Collingwood, and from North Douro to Haliburton.

Some time ago, we published an interesting letter from Mr. C. J. Bloomfield, the representative of the Canadian Land and Emigration Company, giving the result of a personal inspection by himself and others of the wooden railway which runs to the Clifton Iron Mines, near Ogdensburgh, a distance of twenty-four miles.

These gentlemen are of opinion that such railways would be of great service to Canada as feeders to main lines, and likely to prove active agencies in the development of remote settlements, or such sections of country as do not enjoy the advantage of lines running near them. In the back country the material is ready to hand. A saw mill, a blacksmith shop, plenty of maple, and a comparatively small amount of capital are all the requisites. As to the cost, estimates, of course, must be based on the character of the country through which a line would run and the price of timber. At any rate, from two to four thousand dollars per mile may be taken as about the probable cost. The solid maple rails 4 × 6 inches, are wedged every three feet into heavy notched ties, the notch being made by machinery, and the wedges, two at each otch, from the waste of the maple rails. An few minutes suffice to unwedge the rails and lay down new ones. Being tightly notched in, the rails cannot warp sideways. It is said that the wood is made to make a curve in a way that would be found impossible with iron. Fine sand and dust which get on the rails are soon crushed into the wood by the car wheels and form a hard and gritty surface, which does not wear, and greatly facilitates the traction. The maple rail, if sound, will last a number of years, the average life being, according to a good authority, five years, as the wet weather does not materially affect it. Good, broad wheels are essential; where the rolling stock is heavy, the wheels have a rim five inches in width. The sleepers are not adzed. A speed of ten miles an hour for freight trains, and twenty miles an hour for passenger trains, may be attained on these roads without any more risk, where the road is properly built, than would be incurred by running at the same speed on iron rails. This rate is higher than is generally supposed as capable of attainment on wooden railways, and certainly is as much as is realized on some of our iron railways. One of the requisites for the successful working of wooden railways is that the locomotive shall be light, and also the goods carried. We have already given the estimate per mile for cost of superstructure, but we reproduce it now for the sake of those who may not have given the subject attention:

1760 ties delivered at 10 cents	$176 00
21,120 feet b. m. maple rails	316 00
Wedges, say	40 00
Notching ties and track laying.....	468 00
	$1000 00

It is to be hoped that the present time will be taken advantage of by those interested in the development of the country to push forward schemes so fraught with benefit as are those for the construction of railways. Money is abundant, and the farmers and settlers were never in a better position to render assistance to such undertakings. Every one feels instinctively that this country has taken a fresh start, and if the opportunity be allowed to slip by unimproved, we shall fa lay ourselves open to the charge of wan enterprise, which our Yankee neighbors frequently cast in our teeth. If we wish retain our population and get our fair sh of foreign immigration, we must be up doing, for we have a neighbor whose riv tells seriously upon our prosperity, w energy is undaunted, and whose name gone abroad throughout the earth. I but do justice to ourselves and to Canad shall have no reason to fear the most e getic competition. There is plenty of w to be done here, let us give industry a ch to do it. There are lands to be cleared, homes to be hewn out of the forest, a v soil to be cultivated, and mineral treas to be unearthed, let us clear the way for ling hands. If we cannot have broad ga let us have narrow gauges; if iron rail are beyond our reach, let us at least wooden railways.

MARINE LOSSES.

Under the proper heading will be fou unusually long list of marine disasters. occurred mainly in American shipping, v seems to have had rough usage in the late Our underwriters have been pretty fort so far, and now that the equinoctial an storms that usually follow immediately wake are passed they begin to feel con of a profitable season's business. We their expectations will be realized.

NEW PUBLICATIONS.

EXCHANGE TABLES, by H. Morton Festing, Com. Gen. to H. B. M. Forces. O G. E. Desbarats.

This book, which is very creditable in a ance to the publisher, Mr. Desberats of C contains tables for the conversion of Sterli Dollars and Cents, and *vice versâ*. The fi contains 100 tables, rising by 8ths from 0 also a table of differences at 1-16. The v systematic and complete, and should ta place of Oates' tables, which have been he generally used. The testimonials from th missary General, Mr. Sterling, of the Unio of Halifax, Mr. Vezina, of La Banque Nat Mr. Woodside, of the Royal Canadian, M vey, of the Audit Department, and others, in no measured terms in its favour, and w great pleasure in expressing our satisfacti the system on which the tables are base the admirable manner in which the combi are devised. We commend this work to th tion of Bankers, Brokers, and Merchants.

ADJUSTMENT OF FIRE LOSSES, by J. G Insurance *Monitor* Office, New York.

We acknowledge, with thanks, the recei C. C. Hine, Esq., of New York, of a copy useful book. It is written evidently by a

adjuster. The examples given are lucid, and ver intricate losses in which both concurrent d specific policies were concerned. The law ating to points likely to arise in adjustment is mmarized in an intelligible manner under propriate heads. By the way, it is stated, at "transfer of insured property to an assignee nder a decree of bankruptcy is alienation." This int is not fully settled here, and we should like see a legal decision on the subject. We com- nd the following extract to Insurance Com- nies :—

"All adjustments should be made without un- cessary or vexatious delays; no merely technical frivolous objections should be made; but honest ims, fairly established, should in all cases be as rly met and liberally construed; and the insured ould receive the full indemnity contemplated by contract. No responsible Company having y care for its good name in the community ould sanction any short-comings of its adjusters these particulars. Any other course would be politic, unjust, and highly reprehensible, and dly tend to add to the prejudices already engen- red in the minds of quite a portion of the com- nity against Insurance Companies, in conse- ence of the dishonest practices of many unprin- oled 'adjusters in the settlement of claims for ak or restless institutions."

Mr. Griswold's compendium will prove a useful nd-book to adjusters and fire underwriters nerally.

Practical Treatise on Savings Banks, by Arthur Scratchley, M A. London: Longman. Toronto: Scott & Walmsley.

Practical Treatise on Building Societies, by Arthur Scratchley, M.A.

reatise on Life Assurance and Reversions, by Arthur Scratchley, M.A.

anual of Church Property, by Arthur Scratchley, M.A.

We need say nothing in praise of Mr. Scratch- y's works. His abilities as an author and his minence as an actuary, have been recognised at me and abroad. The books mentioned may be tained from Messrs. Scott & Walmsley, whom r. Scratchley has appointed his special agent for nerica.

The Stratford agency of the Western, of Can- a, has been transferred to Mr. Hayward, late of e Royal Canadian Bank.

MADOC GOLD DISTRICT.

(From our own Correspondent.)

Belleville, Oct. 12, 1868.

The confidence which was beginning to be par- dly resuscitated in our gold region, has suffered other severe shock in the failure of the Anglo- xon mill. After six weeks' work, with thirty mps, three pans and thirty Wyckhoff oscillators, e quantity of gold collected amounted to a mere fle, while a loss of over 600 lbs of mercury was stained. This denouement has all along been edicted by most of our practical men, who have constantly averred that the company had no indi- cations of the existence of a mineral vein in the locality where they chose to erect their works, and from the cursory examination I had the oppor- tunity of making, I must say that I quite concur in that opinion. How the managers happened so far to be misled, I cannot explain, but no doubt they must have had some "big" assays to induce them to spend their money so freely as they have done.

The effect of these disappointments is, that the opinion is rapidly spreading among our mining men, that the amalgamating process will not answer for the successful treatment of the ores of this region,—that the gold is not in a form in which it can be collected by the use of mercury, and that some other method must be applied in order to get a remunerative return from our mines. It is also currently reported that the actual result of the crushing lately done at the Caldwell (Severn) mill was only $8.00 per ton, instead of $19.00, as given out, and that the latter figures were taken from a calculation as to what the return would have been if the work had been done upon clean veinstone, instead of a mixture of wall rock and other dead matter with the gangue, of which the auriferous quartz constituted only one-third.

The Fiegel mine, from which the above return was obtained, is now under an injunction, a suit in chancery having been entered on the subject of title.

The Richardson company have raised money to set their works in motion again, and are about to make another trial as to whether they can recover their lost lode.

The Merchants' Union company have had a meeting, and have determined to make some addi- tions to their machinery, and to give their ore a practical trial.

Messrs. Jones & Robbins are pressing forward their reduction works to completion. When finished we shall have a fair trial of the effect of the much talked of Stevens flux. Much doubt is expressed by the initiated in mining matters as to the result both practically and financially, but the gentlemen principally interested are quite confi- dent in the efficiency of the material, as well as the quantity of gold contained in the ores they are about to work, which are chiefly of the pyri- teous class. I sincerely hope they may be right, and that the spirit they have shown may be suita- bly rewarded. If this process fails, there is only one other which can be brought into operation with any hope of success, and that is Chlorination, which has not yet been tried here, but which if used in connection with good concentrating machinery, and an efficient desulphurizing appar- atus, such as Whelpley & Stover's water-furnace, may yet enable our miners to remunerate them- selves for their labor and outlay in developing the mineral riches which exist in the rocks of the district; from the mills as at present constructed and worked, we have little to hope.

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Oct. 13, 1868.

In the present state of the money market it is difficult to strike on any new feature. The great ease still continues, there is little demand for funds to send to the West. The banks hold large accumulations of moneys belonging to parties who usually at this season have plenty of employment in trade for it, but that being the case only to a limited extent, the difficulty arises how to employ it for short dates. The consequence is, in the absence of speculation, a wish to get hold of good commercial paper, and also an active inquiry for all eligible stocks and bonds. To-day there is rather a better demand at the banks for funds, and prices of favorite securities are steady at full prices. Bank of Montreal is stiff at 135, sellers asking more; British, nominal at 103½ to 105; City, sellers at 104, buyers 103½. A glance at our weekly stock and share table will show how high prices rule.

Gold closes at 137⅜. Silver buying 3⅜, selling 3 to 3¼ dis. Greenbacks buying 27½, selling 27 to 27¼ dis. Gold drafts on New York, par to ⅛ dis. Bank exchange on New York buying 27¼, selling 27 dis. The silver movement is at present very slack.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The stock market which opened with some activity is again very dull in consequence of the scarcity of securities.

Bank Stock.—There are buyers of Montreal at 135 and sellers at 135½. British is offered at 105½. Ontario has advanced 2 per cent. on last week's quotations; no sellers now under 101½. There are buyers of Toronto at 117, no stock in market. Royal Canadian offers at 92 with buy- ers at 91½. Sales of Commerce occurred at 103¾ for all paid, partially paid stock offering at 103 to 103½. Gore, nominal and lower. Buyers offer 105 for Merchants, with no sellers under 106. No Quebec in market, buyers would give 98½. Buyers would give 108½ for Molson's, but no sales occurred since the books opened. City is asked for at 103½. Du Peuple is offered at 105½. Buyers offer 107 for Jacques Cartier, no sellers under 108. For Mechanics 97 would be paid. Other banks nominal.

Debentures.—Short dated Canada sixes (cur- rency) offer at 100¾, and Dominion stock at 101½. No Sterling bonds in market. Little doing in Toronto, a few small sales occurred at rates to pay about 7 per cent. interest. There were considerable sales of County at rates to pay about 6⅜ per cent. interest.

Sundries.—City Gas is much asked for at 105. There were sales of Canada Parmanent Building Society at 121, very little to be had. Western Canada sold at 113½, and is much asked for at that rate. Buyers will only give 127½ for Mon- treal Telegraph. There are buyers of Canada Landed Credit at 70 to 72 for stock with all calls paid. Little doing in British America Assurance sellers at 56. No mortgages offering; they can be readily placed at 8 per cent. Money is offered freely on good paper.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Oct. 13, 1868.

The autumnal weather noted in my last still continues, open days and cold nights, with now and then a sprinkling of rain, the weather is most favorable for fall ploughing, and all farmers of any experience know, that an acre ploughed in the fall is worth two ploughed in the spring, the soil is turned over and exposed to the autumn suns and rains, which penetrates well into the earth and the snow which is undoubtedly an excellent irrigator has a better chance of percolating into the soil.

Business during the week has been rather below an average, this is chiefly caused by the tardy arrival of the fall fleet, only some four vessels having arrived from Europe during the week, one of these is from London, one from Liverpool, one from Greenock, and one from the Continent. The number of arrivals by sea from opening of navigation to date are 361 exactly the same as during the same period last year. Several vessels are at Quebec ready to come up, but we have nothing to load them with; so far the prospect looks very dis-

couraging, and unless a great change takes place within the next fortnight, we may regard our fall export trade as a failure. The persistance with which the farmers and grainholders in the west have held on to their grain is almost unparalelled, and I much fear that they will be heavy sufferers, as speculators in the east have held back, plainly seeing that prospects did not warrant, their embarking in any speculation at the rates which have ruled during the fall.

The Produce Market here is exceedingly dull and prices have a downward tendency, thus showing that the bottom is not yet reached. Flour has declined 5c. to 10c. per bl. with very little doing, the impression being that supers will touch $5 before any rally is made. Choice brands of strong bakers' flour are in demand and keep well up in price, but the general feeling is one of depression. Wheat has also declined and with the exception of a few not important shipments the market has been very dull, prices in the west are so high that buyers here cannot operate. U.C. Spring sells slowly at $1.20. $1.22½. and Chicago No. 1 $1.18. Some cargo sales have been made of Peas, and prices continue firm say $1.07 per bush. Owing to the speculation west in Barley, prices here have ran up, but the rates are nominal. As I have always predicted, the prices both of Barley and Oats will rule high during the winter, the great shortness in the crops in Eastern Canada falling on the coarse grains. Ashes, the market for which is of great interest to your country storekeepers west, have commanded a ready sale at First Pots $5.65 $5.75, seconds $5.05 $5.10. Pearls $5.55. $5.60. For Provisions the market is fairly active, and the prices of Pork are maintained. Beef has declined owing to the large quantity imperfectly fattened being brought forward ; farmers are anxious to press off as much stock as they can before the winter, as fodder is certain to run so very short. Dairy produce continues to command very high rates, the shipping demand for England being almost as active as ever, best dairy butter would command as high as 25c. Cheese sells at 10½c, 11½c. We need not look for any permanent reduction of prices during the winter.

Total Receipts of Flour 1st Jan. to 7th Oct.

1867.	1868.	Increase.
Bus. 1,199,346.	Bus. 1,348,856.	Bus. 149,510.

Groceries.—As to be expected after our large fall sales, there has been somewhat of a lull, this is especially the case in Teas, the buyers not yet having sorted out their new stocks and consequently will not for the present enter the market. The trade is not however over stocked; the high prices at recent sales having deterred many timid buyers from operating. We may therefore safely expect a good fall trade at full prices, as the state of the New York and London markets do not warrant any idea of a decline. In sugars there has been considerable stir, some 2000 hds. having changed hands during the week, the Refiners have been large operators, their purchases have been made chiefly on private terms, the market has stiffened considerably. The Refiners have advanced their rates ¼ on yellow and ⅜ on white refined sugars. Molasses have followed the sugar market, but the sales have not been extensive, prices are very firm. Salt in which there has been a great deal of speculation during the fall, appears to have touched the highest point, viz. : $1. $1.05 for Liverpool coarse ; it has now receded to 95c. and as some arrivals are shortly expected and the demand for Chicago has fallen off, a further decline may be looked for. Fish Oils still continue very high, the demand for the Eastern States being active All Cod Oil here is held on speculation, and as the yield especially of Cod is reported very light, a high range of prices may be expected. Of Fish there have been two sales on the wharf and prices ruled higher than they have done for years back and if our advices from the Lower Ports are correct we may look for a very high range of prices of fish during the season. I would advise your western buyers to watch narrowly the market here, and seize the earliest opportunity of supplying their wants.

Dry Goods and Hardware call for no special notice this week, trade is brisk and so far favorable ; in a short time I will be able to give you a better idea of the trade in these articles during the fall.

Toronto Produce Market.

Grain.—*Wheat*—Receipts 15,780 bush. and 15 291 bush. last week. The market is dull but steady. Spring is offered freely at $115 with a small demand at $112 to $113. There were one or two orders for good fall in market, and sales of several car loads occurred at $131 to $136 ; inferior almost unsaleable. *Barley*—Receipts are growing less, 35,474 came in by cars during the week against 41.103 bush. for the previous week, street receipts 20,000 to 30,000 bushels. The market opened at $1.38 to $1.40, and advanced closing steady and firm at $1.48 to $1.50 ; sales for the week 85,000 bushels at current rates, shipments about 65,000 bush. of which one cargo went to Chicago. Peas—Receipts by cars for the week 4,564 and 2,944 bush. the previous week ; market dull, sales of car loads at 90 to 91½, and a lot of 10,000 bush. at Port Stanley at 85 cents per bush.

Oats.—Receipts 6,081 bush. and 3,671 bush. for the previous week ; market dull at quotations.

Flour.—Receipts 1.825 bush. and 3,700 bush. last week. There is no demand of consequence for any grade No. 1 is offered at $5.15 and one or two small lots of favorite brands have been taken at that figure. Prices are kept at so high a point that Boston and New York shippers have had the lion's share of the business lately. In the higher grades there is nothing doing.

Provisions—*Butter* is firmer and several lots have been placed for export at 22 cents, at which figure their is a fair demand for good lots. *Dressed Hogs*—A few light hogs are arriving and sell at quotations. Buyers are prepared to pay a good figure for mess hogs, one dealer offers to take 1000 mess hogs between the 1st and 14th Nov. at $8. *Pork*—Mess is firm, and held at $25, with a good supply of Chicago Standard in market. There are considerable orders in market for November delivery. *Cheese*—Offering by the car load at 11½. *Eggs*—good receipts and a fair demand at 16 cents.

Salt.—American barrelled salt $1.60. Liverpool coarse, is firm and higher, at $1.20 ; sales at $1.15.

Live Stock.—*Cattle* are selling at $4.50 to $6.50 according to quality; there is a good demand for first-class. *Sheep* $2.50 to $3.50 each. *Lambs* $2 to $2.50 each.

The Cotton Crop.

Our crop reports this week are a trifle more favourable. The telegraph informs us of one storm passing up from the Gulf along the Atlantic coast, but our advices show that it was almost entirely a coast storm and did not extend far into the interior. From the West and Southwest the reports are better, the weather being good and complaints of worms, &c., being less frequently heard. Almost everywhere the freedmen appear to be working well.

Annexed is a statement showing the stocks of cotton in Liverpool and London, including the supplies of American and Indian produce ascertained to be afloat to those ports :

	1867.	1868.
Stock in Liverpool,...bales	820,520	422,140
" London.....	110,810	74,360
American cotton afloat	10,000	3,200
Indian	336,280	83,950
Total.....	1,277,610	1,183,650

—*Financial Chronicle.*

Halifax Market.

Breadstuffs.—Oct. 6.—We have a further decline in prices of Flour to note, and holders are anxious to sell. We quote Montreal brands of No. 1 at $6.90 to $7 ; Toronto brands from Canada Wheat $7 to $7.25; Extra $8 to $8.25; Extra State $6.25 to $7 ; Corn Meal dull at $4.6[illegible] $4.70c, for kiln dried ; $4.40 to $4.50 for [illegible] Ground. Oatmeal $7.75 to $7.85. Imports [illegible] January 1st to October 6th, 1868 and 1868 :—

	Brls. Flour.	Brls. Cornmea
1868.....	135,147	41,945
1867.....	141,584	29,951

West India Produce.—The prices of S[illegible] and Molasses remain the same as last week. [illegible] cargo of grocery Cuba Sugar was offered at auc[illegible] during the week, and sales were effected at 7[illegible] 8c., duty paid, equal to 5[illegible]c. to 5[illegible]c. in b[illegible] Sales continue in lots at our quotations. [illegible] stock of Vacuum Pan being entirely exhaus[illegible] renders the holders of the better grades of P[illegible] Rico very firm in their prices. Porto Rico 6[illegible] 6[illegible]c. in bond

Financial.—Bank drawing rate on Londo[illegible] days sight 13 per cent. prem. : Private 12[illegible] 12[illegible]c. prem. New York Gold drafts at sigh[illegible] per cent, prem. Currency drafts 25 per cent. [illegible] count. Montreal sight drafts 4 per cent. p[illegible] Newfoundland sight drafts 5 per cent. pre[illegible] *R. C. Hamilton & Co.'s Circular.*

Buffalo Robes.

Buffalo Robes.—The Hudson Bay Compa[illegible] first consignment of Buffalo Robes has this [illegible] been disposed of by private sale to the purcha[illegible] at the auction sales of last year. A tariff was [illegible] mitted to each purchaser, and the distributio[illegible] each was stated to be made in proportion to [illegible] previous year's purchases. The collection amo[illegible] ed to about 8000 robes, and the Company gua[illegible] teed that the whole collection to be sold this [illegible] should not exceed 10,000 robes, i.e. : 2000 [illegible] that to be sold in addition to the 8000 of the [illegible] sent consignment. The whole lot at pr[illegible] offered has been taken up, and is, we belief, [illegible] cipally in the hands of four of the principle [illegible] houses. One of the larger houses has, how[illegible] not bought any—a circumstance which excite[illegible] mark, as the collection outside the Compan[illegible] this year very small. Last year the Com[illegible] sold at two sales about 17,000 robes. The fo[illegible] ing is the Tariff :—No. 1 Prime, 12½c ; No. [illegible] 9⅜c; No. 3 do, 7c : No. 1 Summer, 6½c ; N[illegible] do, 4½c ; No. 1 Calf, 5½c ; No. 2 do, 3½c ; N[illegible] do, 1½c.

A New Feature in Ship Building.

A firm in Boston is building a new descri[illegible] of vessel suited to the importation of molasse[illegible] other liquid matter in bulk. This mode of tr[illegible] will save much expense, and would assu[illegible] create considerable business in cooperage at [illegible] port of reception.

Gore Bank.

THE Adjourned Annual Meeting of the Shareholde[illegible] receive the Report of the Committee appointed [illegible] meeting held on the 3rd day of August last, will be h[illegible] the Banking House,

On MONDAY, the 2nd of NOVEMBER next, at n[illegible]

By order of the Board,

W. G. CASSEL[illegible]
Cas[illegible]

Gore Bank,
Hamilton, 12th Oct., 1868.

THE PRINCE EDWARD COUNTY
Mutual Fire Insurance Compa[illegible]

Head Office,—PICTON, ONTARIO.
President, L. B. Stinson; *Vice-President*, W. A. Rich[illegible]

Toronto.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

ÆTNA

Live Stock Insurance Company.

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.,

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company.

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

aug 15-1yr

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,—I have pleasure in layine before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northam, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in tact for Policy-holder's heirs, or other purposes.

Accumulated Fund, $2,000,000, *Income*, $1,000,000.

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country, and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers to intending assurers the following reasons, amongst others, for preferring it to other companies:

It is purely Mutual It allows the Insured to travel and reside in any portion of the United States and Europe. It throws out almost all restriction on occupation from its Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and all cash company. Its Dividends are declared annually and applied in reduction of Premium. Its Dividends are in every case on Premiums paid. The Dividends of the PHŒNIX have averaged fifty per cent. yearly. In the settlement of Policies, a Dividend will be allowed for each year the policy has been in force. The ummber of Dividends will always equal the outstanding Notes. It pays its losses promptly—during its existence never having contested a claim. It Issues Policies for the benefit of Married Women beyond the reach of their husband's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting*, as it always allows the assured to surrender his Policy, should he desire, the Company giving a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceedingly low and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

Meetings.

MOLSON'S BANK.

The annual general meeting of the shareholders of this Bank was held at its Banking House, in Montreal, on Monday, 12th October, 1868.

William Molson, Esq., President, having taken the chair, the Cashier read the following report:

GENTLEMEN,—A statement of the affairs of the Bank for the past year is now submitted.

The profits for the year amount to	$90,083 43

Which were appropriated

To payment of dividend No. 25	$40,000 00
Do. do. No. 26	40,000 00
Bad debts written off	10,083 43
	$90,083 43

In consequence of the business of the Bank, at present, being entirely local, and from the large amount of American silver in the country, the circulation still continues very contracted.

The Directors will have much pleasure in giving any information required by stockholders, regarding the affairs of the Bank.

(Signed), WILLIAM MOLSON, President.

Molson's Bank, Montreal, Oct. 12, 1868.

1st. It was moved by Thomas Workman, Esq., seconded by John Ogilvy, Esq., That the report now read be adopted and printed for distribution among the shareholders.—Carried.

2nd. It was moved by G. W. Warner, Esq., sconded by F. X. St. Charles, Esq., That the thanks of the shareholders are due, and are hereby tendered to the President and Directors for their efficient management of the Bank during the past year and that the President be requested to accept the sum of $2,000, in consideration of his valuable services during that period.—Carried unanimously.

Messrs G. W. Warner and F. X. St. Charles having been appointed scrutineers, reported the undermentioned gentlemen re-elected Directors for the ensuing year, viz., William Molson, Esq., John H. R. Molson, Esq., Ephrem Hudon, Esq., Thomas Workman, Esq., John Ogilvy, Esq.

(Signed), WILLIAM SACHE, Cashier.

STANSTEAD AND SHERBROOKE MUTUAL FIRE INSURANCE COMP'Y.—The Annual Meeting of the Stanstead and Sherbrooke M. F. I. Co. took place on the 5th inst., R. W. Heneker, Esq., in the Chair, and A. G. Woodward, Esq., acting as Secretary. The President, Hon. Edward Hale, presented the Annual Report, which was read and adopted.

The following gentlemen were re-elected Directors: Edward Hale, A. A. Adams, Wm. Fling, Eros. Leborvean and C. Allan; Henry G. Pierce was elected to fill the place of Elisha Gustin, deceased, and with J. Griffith, B. T. Morris, and G. K. Foster, who remains in office, constitute the board of Directors for the ensuing year.

A resolution was adopted instructing the Auditors to examine the deposit notes to see if they are correct as represented in the statement submitted to the Directors; and a vote of thanks was passed to the President and Directors for their able management of the affairs of the company.

On motion of F. W. Terrill, seconded by R. W. Heneker, it was voted to recommend an increase of salary to the Secretary-Treasurer, which may be considered as evidence of approval of Mr. Woodward's services. After a vote of thanks to the Chairman the meeting adjourned.

We learn from the annual report that the number of policies issured is 4079, an increase of 886 during the year; the value of property at present insured is $3,700,318, an increase of $863,170 for the year; Deposit notes, being capital of the company, $273,864, an increase of $65,040 35. The amount of assessments due is $6,638, being a reduction since last report of $1,853. There has been an increase in the company's liabilities during the year of about $3.251. Amount of losses $10,764, an increasc of a little over $3,000. The increase in liabilities is attributed to the increased losses, which have been met by current receipts,) and the writing off of a considerable nnmber of bad claims. The losses of the year though large, are, as compared with the whole amount insured, about the same as last year, or 3½ per ct., and will be met together with the liabilities, by the assessment of 6 per cent laid by the Directors.

The report alludes to the case in litigation against A. W. Kendrick, Esq., involving to $1691, "which the Directors with much regret felt it their duty to institute, and which by the decision of the Board and the advice of their Counsel is now under appeal in the Court of Review."—*Sherbrooke Gazette.*

TORONTO AND NIPISSING RAILWAY.—The Brock township council have adopted a by-law granting $58,000 as a bonus to the Toronto and Nippissing railway.

Mining.

NOVA SCOTIA GOLD MINING REVIEW.

The weather has again interfered with open air operations, but the reports from underground works continue encouraging. There is less demand for new investment, either in stocks or land, and prices of both have a falling tendency.

SHERBROOKE.—"Wentworth" reports:—The explorations of the Canada Co. are still perseveringly prosecuted. The Woodbine Co. have suspended operations, but it is understood only for a brief period, pending a meeting of the shareholders. The New York and Sherbrooke Companies staff is being lessened, Mr. Zwickel contemplating a return to Europe, while new machinery is being prepared for the mine. The Stanley Company have stopped work altogether. The Meridian Co. are prosecuting a shaft on the line of the Dominion lode, and their mill is going to work in a day or two on their own rock. The Metropolitan Co., which owe their success mainly to the good management of Captain James Warren, an English miner, have sent up 102 ozs. 7 dwts. of gold. A bar of 84 ozs., sent up in July, was not reported in the *Gazette*. They are now working on the south shaft, in which they have about two feet of pay ore. The Dominion mill is working satisfactorily.

WINE HARBOR.—The new developments in this district promise well.

ISAAC'S HARBOR.—The Mulgrave Co. represented by Mr. Balcam, sent up $3000 worth of gold on the 20th ult.

ECUM SECUM.—The Atlantic Co. are pushing forward their works and have commenced erecting their crusher. They have thus far exposed twenty-nine lodes, and have sunk three shafts, two on the North lode, which is two feet thick and shows fine gold, and one on a fourteen inch lode running between walls of slate. A band of quartz seven feet wide, containing nine lodes, two showing gold, forms part of the exposed ground. They employ a force of twenty men at present, but as the work proceeds will increase their staff. The batteries have been supplied by Montgomery & Co., of Halifax, and the mill is being put up by Mr. McPherson, of Sherbrooke. The soil averages from two to six feet, and the road to the western field is in good condition. The journey from Halifax can be accomplished in two days. Mr. F. S. Andrews, the manager for the Atlantic Co., reports encouragingly of the prospects of alluvial washings being found in this district, and, having had experience in California, his opinion is entitled to some weight.

TANGIER.—The Strawberry Hill Co. have cleared up 108 oz. 12 dwts. from 31 tons of quartz, as the product of last month's work.

RENFREW.—The Ophir Co. are opening up the new lode lately spoken of, which still improves in depth. The Andrews lot is being worked to advantage. An experimental crushing from the Macdonald and Thomas lot gave 1 oz., 14 dwts., 15 grs. to the ton, and the lode shows well the deeper it is sunk upon. The Carnarvon Co. have about twenty men at work, and have laid bare several new lodes, which will soon be tested.

MONTAGUE.—The works of the Montreal Exploration Co. have been suspended for the season. The Albion Co. have not furnished any report.

LAWRENCETOWN.—The works of the Montreal Exploration Co. in this district, too, have been suspended for the winter. A property, consisting of forty-nine areas, belonging to Mr. E. M. Strange, and offering an extent of nearly half-a-mile on the lodes, worked by Messrs. Chapel & Werner, is placed in the market, or rather $15,000 are sought to be raised for its proper development.

UNIACKE.—The Montreal Exploration Co. have suspended operations for the winter; not from any discouragement met with, but because the sum voted for preliminary works on their various properties at Uniacke, Lawrencetown, and Montague has been spent, and the season is unfavorable for further prospecting. The Mayflower Co. have been industriously trenching, and exposed several veins of moderate size. The Westlake Co.'s mill is again running. The Queen Co. show the quality of their ore and the capabilities of the district by some handsome specimens at the Exhibition. The Brunswick Co. report a new lode, supposed to be the Macintosh. The Uniaeke, Central, Prince of Wales, North St. Lawrence, and Montreal Companies have not reported. Mr. Burkner's large lode gave 9 oz., 12 dwts., 3 grs., from a crushing of 17½ tons. The Alpha Co. have ceased explorations, but the mill is fully employed on custom work, and next week will be fitted with a third battery.

THE OVENS.—Captain Cornwall and Mr. Clarke, of Boston, are trying to retrieve the character of this district. The former is going to some expense in the erection of a smelting furnace. The latter has bought up the Macdonald claims. Work on Mr. McCulloch's property is also spoken of as about to be resumed before winter sets in.

GOLD RIVER.—The property of the late Chester Co. will, we understand, be taken hold of and worked this fall by Canadian capitalists, and a mill put in operation forthwith.

MUSQUODOBOIT.—Rich specimens full of fine gold from this district, from the lode, were brought to town by Mr. Burkner, who has just returned from the district. Most of the veins run in slate. Three lodes are already opened: one 15 in., one 7 in., and one 5 inches in width. The slate shows fine gold freely. The present drawback to prospecting on this field is the great depth of soil.—*Halifax Mining Gazette.*

COPPER.—The proprietors of the Tilt Cove Mine, Newfoundland, estimate their shipments for this year at 8,000 tons.

OIL DISCOVERIES.—A reliable informant, just returned from an exploration tour in Cape Breton, relates the discovery of an oil spring there, but for reasons which can be appreciated, does not at present wish the precise locality to be named.

QUICKSILVER VS. MELTED ZINC.

Successful gold mining comprises the possession of sufficiently rich gold quartz to pay the extraction and working, and the ability to extract the gold from the quartz economically and perfectly, in a few operations, and with as simple machinery as possible, requiring the presence of only such conditions as are anywhere at hand.

When we fairly examine the retentive faculty of quicksilver for gold, we find it very limited, indeed;—that the affinity acts on the perfectly pure surface of both—a minority of cases in reality and that a reduction in temperature so greatly—reduces the affinity, that it hardly exists below a temperature of 42° Fah. The result is that on an average only one half, or thereabout, of the gold is extracted by quicksilver from the ore; the rest is either carried away as flat-gold, by the water required for the batteries, or remains in the taillings. This fact, known to every intelligent operator, should alone be sufficient to point out the imperative necessity of devising other extracting agents for that great majority of ore, containing more than $20 to $25 per ton; but not rich enough to leave a profit by direct chlorination. Concentration of the sulphurets, for chlorination is at best a great loss in float-gold. Many localities, with rich quartz veins, have insufficient water for batteries within convenient distance, and for the greater part of the year the ore has to be hauled long distances, with heavy expenditure, to a mill-site with water, or the mine must be abandoned and lie idle.

The case therefore stands thus: What is required, is an extracting agent, that does the work complete, cheaper than chloride, and requiring no water to reduce the ore, except such as is needed for the engine.

Zinc, of all substances in existence, chloride not excepted, has the greatest affinity to gold. Its action, in a melted state, on gold, is to instantaneously dissolve the same in any proportion. Its specific gravity, about 7, is sufficiently high to float all debris, not expecting sulphurets of iron the constant companion of gold. It melts at a comparatively low temperature, and requires but little heat to retain its melted state. It is sufficiently volatile to permit of retorting, as in the use of quicksilver, but by a covered surface and a temperature below a dark red heat the loss by volatilization and burning is hardly appreciable, while the metal is obtained at a low price and in any quantity required. Thus we have in zinc a material manageable and fulfilling the conditions required of a gold extracting agent in a high degree, higher than any other known.

The mode of applying it for this purpose is patented, April 7th, 1868, by the undersigned, who many years engaged in gold mining. It consists simply in gradually introducing the gold-bearing pulverized substance, below the surface, into a bath of melted zinc, which will immediately attack and dissolve nearly or every particle of gold, while the debris rises to the surface to be taken off. The mechanism is very simple and durable. Should sulphurets, in which particles of gold are so finely imbedded as not to offer any contact even on the smallest point, prevent the extraction to such a degree, that it will pay to work it over by concentration, roasting and chlorination, it may be done. But all the gold, in the other lost as float-gold, and much more, is certainly already saved by the zinc. Dry crushers to be used in preference.

Millions of tons of tailings, now worthless, might thus be worked profitably, and thousands of good mines not capable of profitable working by amalgamation or chlorination, could be made to yield fair profits. Millions of dollars annually would thus be saved to the country.

Gold mining throughout the country languishes for the want of such a radical improvement. The additional cost of extraction by zinc may be estimated as about $8 to $12 per ton, or less than by chlorination while it does the work fully or nearly as effectually, certainly infinitely quicker.—*St. Journal.*

THE INTERCOLONIAL COAL CO.—The opening of the railway of the Drummond Colliery, the works of the Intercolonial Coal Co. at Pictou River, County Pictou, was celebrated on the 1st October. Sir Wm. E. Logan, the Honorable Mr. Jackson, U. S. Consul at Halifax, Major [illegible] U. S. Consul at Pictou, and the Honorable Mr. Howe, Keith, Robertson, and other distinguished guests, honored the occasion with their presence. The *Citizen* says:—"Operations were commenced in November, 1867, and since that time the company have sunk a double slope on the seam to a depth of 730 feet, with lateral galleries at intervals of from 200 to 300 feet, from which about 100 tons of coal have been brought to the surface where it is ready for shipment—they have built a railroad over seven miles long, on which are several large and costly structures and heavy cuttings—and have built a wharf 750 feet long, with 'shoots' at which five ships can be simultaneously loaded, and capable of putting on board 1,000 tons a day; the whole being accomplished in eleven months, and at a cost of about four hundred thousand dollars. The railway was built by contract by Mr. Moore, of Montreal; the coal mining works have been conducted by the company's manager, Mr. Dunn—two gentlemen who seem to thoroughly understand their business. The day after the opening, the steamer Minnie Stevenson was loaded with coal for Montreal at the company's wharf."

HOW TO SAVE QUICKSILVER.—G. [illegible] proposes to save the mercury wasted in the process of amalgamation; he entertains the opinion that 300,000 tons of that metal has been lost in the process. It escapes in the form of a chloride, called calomel, as it is called. He advises the

insoluble residue with nitrate of soda and chlorie acid, in order to convert the insolu- b-chloride of mercury into the soluble bich-, or corrosive sublimate. This solution is to eated with sulphide of calcium, which is d as a winter product by the final reduction s. The mercury will be changed thereby black sulphide. After drying the sulphide e placed in retorts, with the proper amount cked lime. The mercury is then obtained stillation, and is caught in a receptacle con- g water, connected with the retorts. The de of calcium residue in the retort is then or changing the sublimate into the black le.—*Journal of Mining.*

Insurance.

E RECORD.—Stratford, Oct. 12.—A building by Jas. McCullock, known as the old flax ok fire and was consumed ; the flames spread rding and fulling mill adjoining but were uished, by the fire engine ; no insurance. x mill is believed to have been set on fire e low characters who frequented it.

tharines, Oct. 15.—May's tavern, partially ed ; loss, $300 ; no insurance.

St John, N.B., Oct. 6.—House of J. McIntosh ; l for $100 : cause defective stove pipes.

W's corners, near Stratford, Oct. 9.—Barn of ae and contents wholly consumed ; loss 0 $800 ; insurance on building $150. It was by some drunken fellows going into the barn , and lighting their pipes there ; they were l and committed for trial.

eytown, Wentworth Co. Ont. Oct. 12.—A lly destroyed the dwelling house of James n, and store and dwelling house of Jno. Furniture and contents of Clark's store The buildings were owned by Jno. Howard ; 0 ; no insurance. The fire originated in e pipe or chimney of Lunnon's house.

t. John, N.B., Oct. 16.—A telegram says :— uctive fire took place this morning at Black- 's ap and Candle Factory and Peters Tannery, were partially destroyed. The estimate $10,000 ; only partially insured.

lonia, Oct. 20.—Between three and four this morning the Victoria foundry, belong- to Christopher Young, Esq., was destroyed by h nearly all its contents. Loss between d four thousand dollars. Stock and tools in the Provincial Insurance Company for undred dollars ; building insured in the America for three hundred dollars. Origin fire unknown.

NE RECORD.—Kingston. The schooner e has been got off.

it, Oct. 12.—The schooner Advance went at Grand Haven this morning. She is by Captain D. Dall, of Chicago, and insured epublic, of Chicago.

propeller Merchant, of the Evans Line of s, struck a wreck near Malden, and sunk. go consisted of about 5,000 barrels of flour 000 bushels of oats from Chicago.

gram from Milwaukee, bearing date of the t., says, the iron steamship Milwaukee, off the Grand Haven bar on Friday morn- he Milwaukee left this port at 8 o'clock on y evening with a full passenger list, and tons of freight. The night was dark when and a furious storm arose, owing to the rkness she missed the harbour and ran ound on the bar, and soon drifted broad- he beach. After being exposed to a tre- s sea for upwards of four hours, the fine parted amidships and became a total loss. engers, forty in number, were all safely

Milwaukee was built in the year 1860, at forming with the latter, the Milwaukee Grand Haven Steamship Line. She measured 700 tons, and cost $150,000. She was fully insured."

The schooner Clipper City went ashore at Grand Haven in a gale about ten days since, was got off, and was being towed into the harbor, when it was found necessary to scuttle her. She was a craft of 185 tons burden, having been built at Manitowoc, in the year 1854, rated B. 2, and her approximate gold value was $4,000. She was owned by Chicago parties.

The schooner Australia, bound for Chicago with cedar posts from Green Bay, sprung a-leak off North Bay, and was obliged to put into Bailey's Harbour.

The bark Superior, upwards bouud, coal laden, got ashore below Sandwich on Wednesday night, and on Thursday was being lightered off.

The schooner Fulton, bound from Toledo to Ogsdenburgh, with a cargo of black nut, waterlogged off Nicholson Iulaud.

A late Chicago paper says :—The schooner Albatross reached here yesterday in tow of the propeller Ottawa, in a leaking condition. She will be docked for repairs as soon as her cargo of lumber is discharged.

The tug Union, came iuto port yesterday, having in tow of the schooner Australia, which sprung a leak of North Bay a few days since.

The schooner Hattie Earl is reported ashore on the east shore.

The schooner Thos. Simms was caught on this lake during the gale of Wednesday last, and reached the anchorage at the South Manitouminus, her foresail, mainsail and flying jib were lost.

An unknown bark—apparently grain-laiden—is reported ashore on the south point of the South Manitou Island.

The Canadian schooner Suffel is ashore on East Point. Put-in Bay.

The propeller City of Madison got aground in the Nebash Rapids, Saul St. Marie River, on Thursday, and had to be lightered off.

At Whitehall there are three vessels ashore—two white fore-and-aft schooners, and a topsail, scow, which is paintad lead color. One of the schooners is full of water and apparently in bad shape.

Two vessels are on the beach at Muskegou. One of them is the scow Eugene, out high and dry ; the other the schooner Wayne, which was sunk by the scow Monitor. The Monitor lies inside at Muskegon with a large hole stove in her bow above light water mark. The collision occurred just outside of the piers, while both vessels were endeavouring to reach the harbour.

The bark Fame, while lying iu the River St. Clair, on Thursday, lost her bowsprit, jibboom aud head gear, the result of a collision with an unknown craft.

The schooner U. S. Grant is ashore near Squaw Island.

The schooner David Stewart, which cleared from Chicago, for Escanaba, for iron ore, went ashore on Sunday, at Pilot Island.

The scow, William A. Parker, is ashore near Mauistee. She is loaded with lumber for Chicago.

A despatch from Grand Haven states that the schooner Advance is ashore at that point. She can be got off without much trouble.

The schooner Eagle Wing reached Detroit on Saturday, with most of her cargo gone.

The sch. Chas. Hiuckley was dismasted off Conneaut, Ohio, and is now undergoing repairs at Erie.

The schooner William Tell ran into the pier at Racine on Wednesday last, carrying away everything forward, and smashing in her bow badly. In turning into the harbor she had her small boat smashed.

In addition to the steamship Milwaukee, three vessels were beached at Grand Haven on Friday—two schooners and a scow. One of the schooners lies inside of the Milwaukee. The others stranded nearer the harbor, and were pulled off by a tug without having sustained any injury,

The schooner Glen Cuyler has been docked at Milwaukee to repair the damages sustained in the recent collision with the propeller City of Boston.

The schooner Sailor Boy was the other day chartered at Chicago to carry a cargo of Oats to Boston, direct via the St. Lawrence and around the coast, the first cargo of Oats ever shipped to Boston by this route from Chicago. On arriving at Boston this vessel will engage in the grain carrying trade between that port and New Orleans.

The schooner Defiance which went ashore on Snake Island Reef has been got off.

SOUTHAMPTON, Oct. 17.—The steames Silver Spray dragged he anchor last night or this morning, and is ashore under the light house at Chantry Island. She is supposed to be damaged very much.

WATERLOO MUTUAL INSURANCE COMPANY.—We find the following correspondence respecting this Company in an exchange:—

ARTHUR HARVEY, ESQ.—SIR,—Your letter of the 37th May has been received, and in reply I beg to say, that it is the opiuion of our Directors that our Company can take risks both on the Mutual and Cash system without making a deposit. Our Company was organized under the Act Chap. 52, Con. Stat. Upper Canada. And then we have a Special Act from the Ontario Legislature, authori.ing us to take risks on the cash principle. Our business is confined to the Province of Ontario, and hence we think it comes under the exemptiou of Sec. 25 of the Insurance Act. Please let us know if this is the view taken by you and your Department. Signed. C.M. TAYLOR, Secretary.

Waterloo, June 6th, 1868.

To C. M. TAYLOR, ESQ., Secretary of the Waterloo County Mutual Fire Insurance Company.—DEAR SIR,—Your enquiry as to whether the Waterloo Mutual Fire Insurance Company can take risks on the Cash System without making a deposit admits of an easy reply. If the Company is incorporated by any Act of the Ontario Legislature, and transacts no business outside the limits of Ontario, no deposit is required by the present Act. Signed. ARTHUR HARVEY.

AUDIT OFFICE, Ottawa, June 10, 1868.

GREAT WESTERN RAILWAY.—The half-yearly meetiug of the Great Western Railway Company, will be held in London, on the 21st Oct. curreut to receive the report and statement of accounts and for the election of officers. The transfer books will be closed from the 7th to 21st October, both days inclusive.

From the accounts of the half-year ending July 31 last, the board have decided on recommendiug a dividend at the rate of 2 per cent. per annum, free of iucome tax, reserving £2,000 for the renewal of ferry steamers and carrying forward to the current half-year the sum of £1,129 5s. This rate is just half that paid for the corresponding period last year.

Railway Traffic.—The official returns of Railway traffic for the month of September compare as follows:

Total	$1,156,265	$1,098,110

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There has been rather more activity in the stock market this week, and some large transactions in County Debentures at high prices have taken place.

Bank Stock.—Montreal has again advanced, closing with buyers at 135¾. Nothing doing in British. There are buyers of Ontario at 100½; no sellers. Toronto is asked for at quotations. Paid up Royal Canadian stock is procurable at 92. Sales of partially paid Commerce occurred at 103. Nothing doing in Gore. Buyers are offering 105 and 105½ for Merchants'. No Quebec offering. City in demand at 103 to 103½. Du Peuple is offered at 105½. No sellers of Jacques Cartier under 108. Other banks nominal.

Debentures.—Sales of Dominion Stock occurred at 102¼. Sterling five per cents are offered at 91 to 91½. Sales of Toronto occurred during the week to pay 7 per cent. There were large transactions in County to pay 6½ per cent. interest.

Sundries.—Sales of Canada Permanent Building Society occurred at 121½. Western Canada inquired for at 114. Freehold offering at 106½. There are no buyers of Montreal Telegraph at over 127½. City Gas is in demand at 105 to 105¼. Mortgages are readily placed to pay 8 per cent. Money continues easy on first-class paper.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Oct. 19, 1868.

The abundance of money still continues, and the banks are ready to give accommodation at cheap rates. Round amounts have been lent on call at 4 per cent., and short dated transactions have taken place at 5 per cent. Good paper has been freely done at 6½ to 8. Really good bills are very scarce, and very few offering in the open market. Remittances from the country have much improved of late, thereby enabling the banks to better extend their accommodation. Stocks are active, the demand for some classes being greater than the supply, and outside prices are asked by holders for all favorite securities. Bank of Montreal would readily bring 135½ to 135¾, but there is none offering; Merchants tend upwards, there being buyers at 106¼; but sellers demand 106¾. City in demand at 104, but none offering. People's have been placed at 105¼. Ontario has advanced to ½ prem., but sellers now demand ¾. Toronto, quiet. Jacques Cartier, 109, but buyers not offering over 107½. Royal Canadian in demand at 91½, but sellers want 92. Of our leading stocks Richelieu Navigation Company are in demand at 111. Telegraph Co. dull, at 128, but buyers will not give over 125. New City Co., active, but the difference between buyers and sellers is too wide to admit of operations. Montreal Mining Consols are dull at $2.50 to $2.90, former the views of buyers, latter of sellers. Not much doing in other stock. The silver market has ruled very quiet. You will perceive that Mr. Weir has extended his time for commencing the exportation of silver to the 10th January prox. The reasons he gives in a letter to the *Gazette*, which I enclose. Present price here is 3c. 3½. Gold is 137½, showing a very slight decline on last week's rates.

Provincial Notes.—The amount of Provincial notes in circulation with the specie held for their redemption was as follows on Oct. 7th :—

Notes in circulation—	
Payable in Montreal	$3,264,589
Payable in Toronto	1,202,411
Payable at Halifax	136,000
Total	$4,603,000
Specie held—	
At Montreal	$550,000
At Toronto	450,000
At Halifax (estimated)	30,000
Total	$1,030,000
Debentures held under the Act.	$3,000,000

Post Office Savings Banks.—The amount received from depositors during Sept. was $63,209, interest paid, $22.26; amount of withdrawal cheques, $13,227 67. Total deposits in hands of Receiver-General on 30th Sept., $357,958 87; of this amount $219,907 87 bears interest at 4 per cent., and $135,800 at 5 per cent.

Bank Items.—A bag containing $5,000 in gold is said to have been abstracted from the safe of the Bank of Montreal at Hamilton, in a mysterious manner; there is no clue to the thief—Mr. Park late manager of the Gore Bank in Woodstock, has absconded and he is said to be a defaulter to a large amount. Mr. Park's sureties are believed to be good for the deficiency. Mr. Smith, late manager of the Gore Bank at Guelph has been appointed manager of the Branch of that Bank in Woodstock.

LIVE STOCK IN GREAT BRITAIN.

In Ireland the returns are made up to July 31, dating back to the year 1855, and in England to June 25, for 1867 and 1868 only, and these generally become known about the month of September. We have in consequence thought from the first week in October to the first week in April the most suitable periods to ascertain the results. We begin by giving in a tabular form the number of cattle, sheep and pigs, as furnished by Government from the Irish returns, beginning with the year 1855. In the next column we give the yearly increase or decrease, and in the last column we give the average price for the twenty-seven weeks. This average is from the highest price of best singed Waterford bacon; and, strangely enough, to show the little effect the Government returns have had upon prices, it will be seen that the highest rates have been current in the years 1856-57 and in 1865-66, both of which showed a considerable increase in the quantity of pigs over those of the previous years, and the highest average 69s. per cwt., being in the year that showed the largest number of pigs; then the lowest average prices for bacon were 58s. in 1858-59, and 59s. per cwt. in the years 1862-63 and 1863-64, in each of which years a decrease was shown in the return of pigs.

These remarks will, we think, tend to show that we must carry our ideas a little beyond one particular branch of business, For instance, although we have this year, when compared with last, a falling off of more than one million of pigs, we have an increase of about 340,000 head of cattle and 1,750,000 sheep; then we have to watch almost yearly increase of foreign supplies of stock and provisions. Again, we have to consider the laboring classes are well employed and well—in fact, there are a variety of things that require to be looked into before we come to a just conclusion on the subject. As most of the leading papers of the day have noticed this year's returns, but as none of them have shown the extended produced in former years, we think the statistics we now publish will interest and be acceptable to our readers. The following are the number of live stock in Ireland for each year from 1855 to 1868 inclusive:

Years.	No. of Cattle.	No. of Sheep.	No. of Pigs.	Increase or decrease in Pigs with previous year. Increase.	Increase or decrease in Pigs with previous year. Decrease.	Average prices of Bacon from first week in October to first week in April, say 27 weeks.

THURSDAY, OCTOBER 22, 1868.

THE GRAND TRUNK AND FREIGHT FACILITIES.

At a late meeting of the Montreal Board of Trade, the Hon. John Young complained that "the railroad freight to Toronto was very much less, proportionably, than that to Montreal, the consequences being, of course, very detrimental to Montreal." The President said, "the Council had not lost sight of the subject, nor did it underrate its importance; but there was great difficulty in obtaining a remedy. The freight by the Allan line and the Grand Trunk to Toronto, for example, during the winter, was quoted remarkably low, for the reason that, except at very low rates, no business could be obtained. That arose from the fact that Toronto had several lines of steamers and railways available from New York, while Montreal had only the one line of steamers to Portland, and the Grand Trunk Railway." To a certain extent, Toronto is saved by its position from the effects of a monopoly of the carrying trade. But no thanks are due for this either to Montreal or the Grand Trunk. There being two routes from the seaboard, one viâ Montreal and the other viâ New York, any disposition on the part of the Grand Trunk to take an undue advantage would prejudice itself. As matters now stand, one of the reasons why the Grand Trunk commands this trade is, because the cost of handling goods by the New York route is heavy. If it were necessary, Toronto could make arrangements that would do away with this difficulty. The adoption of a policy which secures a trade that would otherwise take other channels, seems to be considered in Montreal a favour to Toronto.

There is no doubt that Montreal men look keenly after their own interests, and we cannot blame them for striving to keep the Western Province in bondage to their enterprising city. The energy with which they pushed their business deserved success and secure it. But with all their tact, with all their enterprise, they cannot neutralize the natural advantages that have hitherto sustained Toronto nor can their success close their eyes to the fact that Toronto has become a great distributing depôt, whose importance is daily on the increase. A splendid country lies to the rear of Toronto, and as the more remote sections become settled and developed there will arise increase demands upon the trading facilities of this city, and their necessary consequence, increased supplies. The railways now in existence and those about to be constructed will discharge into this reservoir, such streams as will distend to the utmost the channels of commerce. Already have the chains which bound Toronto in unwilling servitude to Montreal been shaken off and the Queen City of the West is securing a great share of the trade which rightly should fall to her, and seems determined not to rest content until she shall not only have regained it but added to its volume by levying on new districts.

The Grand Trunk Company is aware that the portion of its railway which runs through the Province of Ontario, makes the largest returns as will be seen from the following averages for the half year ended Dec., 1866.

Sarnia and Toronto	$128 68
Toronto and Kingston	140 24
Kingston and Montreal.....	132 51
Montreal and Richmond.....	116 34
Richmond and Point Levi...	40 55
Richmond and Island Pond.	80 13
Chaudiere & Rivière du Loup	14 12

The Reviere du Loup section, over 118 miles, was built at a cost of $3,000,000, and worked at a loss placed by some at $70,000 per annum. Mr. Brydges in one of his letters said, "We have to work 250 miles of railway east of Richmond, which yield no profit whatever. In the course of debate in Parliament, Mr. Simpson stated on the authority of Mr. Freer, the lessee of the Rivière du Loup section that while receiving a subsidy of $18,000 per annum for running it, and with a suitable equipment of rolling stock and the free use of four engines, it would have ruined him had he continued to work the line even on these apparently favorable terms.

The political influence of the Province of Ontario is confessedly great and will assuredly increase in magnitude, so that the time will come, if it has not already arrived, when deference must be paid to the interests and wishes of this section of the Dominion. If it can be shown that the Grand Trunk management does gross injustice to Toronto and to Ontario, a strong feeling of antagonism to the Company must spring up and react upon the welfare of the Company. The Montreal people, or some of them, complain that Toronto

is favored in railway freights. So far from being favored the contrary is the case. Any grace shown to Toronto by the Grand Trunk has been a matter of necessity, not of favor. Montreal interests have swayed the traffic legislation; Montreal influence, political and otherwise, has directed the whole unfortunate career of the Company. The political influence which centres in Montreal forced the Company to build miles of unprofitable road, and in many other ways has proved its bane. This secret was learned at great cost, and the Company, awakened to a consciousness of its real position, freed itself of the load. Another secret has to be learned and that is, the gross injustice done to Toronto trade by freight arrangements which discriminate against Toronto and Western Canada generally and favor Montreal on the one hand and the Western States on the other. For the purpose of explaining this, we avail ourselves of calculations made by Mr. Chisholm, a prominent Toronto merchant, who has given a good deal of attention to its elucidation. The unjust policy pursued towards Canada in favor of the United States is thus shown. The rate of freight on flour and meal from Chicago to Boston is 55 cents, equal to 38½c. gold, from Sarnia to Portland, 798 miles, or less than ½c. a ton per mile; from Chicago to Toronto 21½c. equal to 14c. gold or less than 9–10c. a ton per mile; Chicago to Montreal 45 7-10 equal to 32c. gold or less than 65-100c a ton per mile. If we contrast the rates on Canadian productions to Toronto we can appreciate the extent of the injustice which we have to submit to. Sarnia to Toronto 2c. a ton per mile; Stratford to Toronto over 3c.; Guelph to Toronto over 4¾c.; Brampton to Toronto over 7½c. Freight trains from Sarnia to Portland, consist of fourteen cars for which the Grand Trunk gets $38.50 per car or $539 per train, the distance being 798 miles. For the same number of cars from Sarnia to Toronto, distance only 168 miles, the Company gets $490 or $49 less than to Portland. Is it to be wondered at that Western Canada complains of the Grand Trunk not only when inducements are offered to immigrants to go beyond our boundaries as "through freight," but also when the cost of transportation to the sea-board from the Western States is less than from the Province of Ontario, and Western Yankees get their business done at a loss to the Grand Trunk of 150 per cent., which loss has to be made good by us Canadians in the payment of a tax in the way of extra charges on our own productions.

The freight arrangements, which brought about the state of affairs referred to, operates prejudicially to the whole of this Province. We shall now proceed to explain how Toronto is affected directly by the imposition of discriminating rates :—

It requires no great skill to discover why it is that the Grand Trunk Railway Company has so many enemies throughout the length and breadth of this Province. It has been wearing out its rails and locomotives in carrying through freight at a loss and taxing the local freight to make up for it. It has been carrying through freight and either neglecting local freight or transporting it so slowly as to drive business men into using every other available means of getting their goods. No time could be more opportune than the present for an inquiry into the character of the internal legislation of the Grand Trunk. The English stockholders are bent on knowing the real state of affairs, and applying a remedy if there are ills to complain of. For their own sakes, as well as for the sake of the country, it is to be hoped that an immediate investigation will be had.

The editor of *Herapath's Journal* has directed great attention to the affairs of the company, and we commend to his careful consideration what we have set out about. If the Riviere du Loup section does not pay, close it, rather than compel this Province bear an extra tax to make good that loss. the people of Quebec want that section k open, let them pay for it. If the merch of Montreal wish props for their trade, them pay for them. What Toronto wan a fair field and no favor.

THE PREMIUM NOTE SYSTEM

A letter from the Hon. Elizur Wrigh Massachusetts, to S. Pedlar & Co., of M real, has been published in pamphlet f As it may be regarded as the latest add to the literary pile which the Premium controvery has been the means of brin together, we are prompted to make it subject of a review.

We are not admirers of the Premium system; we discussed it fully in all its ings a few months ago, and beg to refe readers to Nos. 27, 28 and 30 of this jou Since then we have seen no reason to ch our opinion, and need not, therefore, enlarge upon it. Our present remark be confined to reviewing the argume Mr. Wright, whose defence is perha best that has been written. We may once, that we are quite at one with h the conclusion that, financially, the sys perfectly sound; in fact, we go a litt ther, and believe that, as a system, i be so, so long as the cash portion of th mium in each year is sufficient to co risk for that year, and so long as the i charged on the notes is equal to or (which in practice it always is) than the rial rate upon which the premium is We believe further, as we showed in t cles above mentioned, that there is ver difference, far less than is generally in between the note and all cash syster that, if there is a slight advantage (w doubt) in the former in respect of the amount of cash which is paid in the f years, it is far more than counterbala the uncertainty as to the rate of pre future and as to the sum which wil ceived at death, so that our objectio the system, though financially soun an advisable one for Life Insuranc Wright (p. 9) casts much ridicule u Barnes for assuming that the justifi premium notes is their being met by dividends. As a matter of history, h Mr. Barnes is probably right, for w the origin of the note system to ha that when it was found that compa declaring annual dividends of 50 per upwards, the question naturally ar pay cash for the purpose of having it in a year or two? why not give a note Mr. Wright justifies the note syste way:

The annual premium to insure $1000 for at the age of 40, is usually $32. If the aries' Mortality at 4 per cent. is adopted e rule of reserve, this premium consists e net $23.68, and the loading for expen- etc., of $8.32. By the same rule the remium to insure $1000 for one year at $9.96. But when the company is paid than that, it does not really insure 0, but $1000, less what will be on hand e end of the year to help pay the loss, d it occur. This, in case $23.67 is paid, e $14.41, and the company really insures $985.59, whether the insured pays all or part cash and a note, which, at 4 per , will amount to $14.41 at the end of ear. He has fully paid for the mathe- al value of the risk by the $9.82 cash. alance of the net premium, $13.86, the ipal of the net value of the policy or ve at the end of the year, may more e be in the hands of the insured than here, and as profitably, if it brings as interest. And if we could be certain he working expenses of the year would xceed $6.18, as the share of the policy, his note might be taken safely for the of the loading, or $2.14, making half year's premium, or $16." (pp. 10, 11.)

s, though perfectly true and proving clearly the financial soundness of the u, is not a correct explanation of its , but rather a comparatively recent in- n to justify its continued existence; as ve consider it a poor one, the note sys- eing an exceedingly clumsy and unsci- method of effecting what is thus avowed object. It seems to be a natural infirm- the Anglo-Saxon mind to adhere to a ple, whether good or bad, as long as le, and rather than adopt a better but ent one to obviate the pernicious conse- es of the old and bad one by various artifices and fictions. The history of h law, from Magna Charta downwards, mmentary on and corroboration of this It is similar in regard to the question now discussing. The obnoxious prin- (in the evasion of which Mr. Wright the justification of the note system) which Life Insurance has hitherto, that nearly two hundred years, been con- l is the payment of *equal* annual sums mium. The defect is that the same paid for a varying and unequal risk, a man insures at 25 for $1000; for pays an annual premium of about $20 ough, whether at age 25 or 60, though latter age the risk is nearly four times t as at the former. It follows of course r more is paid in the earlier years than essary to cover the risk then. This uence is now attempted to be evaded ing loans upon the policy by the decla- of dividends and bonuses, and, accord- Mr. Wright, by the adoption of the stem; in short, by any means rather he adoption of a different, though r principle, that of charging only a sufficient premium in each year to exactly cover the risk for that year, the premium of course increasing each year in exact proportion to the risk. This method was pointed out in a former number (28, p. 249) of this journal. The rates upon such a policy would be about the following, on a life aged 25, for $1000:

Year.	Amount.	Year.	Amount.	Year.	Amount.
1	$9 30	13	$13 00	25	$18 50
2	9 40	14	13 40	26	18 70
3	9 50	15	14 10	27	19 20
4	10 10	16	15 60	28	19 80
5	11 00	17	16 20	29	20 00
6	11 40	18	16 60	30	21 00
7	11 70	19	16 90	31	22 40
8	11 90	20	17 10	32	23 70
9	12 00	21	17 50	33	24 30
10	12 20	22	17 70	34	29 00
11	12 50	23	17 90	35	31 80
12	12 60	24	18 30	36	36 00

These are the Ætna term rates for an insurance for one year at the different ages from 25 to 60: we think they are larger than necessary. Of course, on a policy covering the whole life, a small percentage would have to be added to cover the extra risk of being obliged in the years after the first, to insure whether sick or well. We think the above rates are more than sufficient to cover this. Now in the same company the rate for a life aged 25 for $1000 is $20.52. Half of this being given in note, the cash half would be $10,26; add to this the interest on the note, 62 cents, and we get $10.88 as the cash payment in the first year, being $1.58 more than the above.

The advantages of a policy of this kind over the note system would be the following: 1st. Less cash would have to be paid throughout for the same insurance. 2nd. The annual premium and the sum to be paid at death would be known and certain. 3rd. The insured could allow his policy to lapse at any time without loss, the payments made being exactly sufficient to cover the risk and no more. 4th. The payments would be extremely small in the earlier years when the insured was least able to pay, and would only increase as (on the average) his ability to pay increased.

Mr. Wright concludes his letter with the following remarkable sentences: "The 'note system' can only be successfully attacked on the assumption that all men squander everything which they do not lay up in some savings bank from which they cannot withdraw it. The 'cash system,' as distinguished from the 'note system,' adds to Life Insurance a sort of compulsory savings bank. If a man insures $10,000 for life at 40 in a company, which reserves by the Actuaries' Mortality at 4 per cent., and dies at 80, he has in deposit with the company, at the time of his death, $7,103.88. This, if it is in cash, his widow or heir gets, because it was his own money. In the mean time the sum really insured under the contract has dwindled from $9,855.88, in the first year, to $2,896.12 in the last, and this last sum is all that the widow or heir gets of the Insurance Company as such. With perfect safety to itself the company might have taken and held his interest-bearing notes up to the amount of $7,103.88. If the insured could have made his money always earn one per cent. per annum more than the rate of interest on his notes, he would have gained during 40 years by giving his notes, instead of cash, $1,451 55; and if these gains had been compounded at 6 per cent. from their receipt till the termination of the policy, they would have amounted to $3,575.60. So that, though the widow and children should receive from the company, on the policy of $10,000, the sum of $7,103.88 in promissory notes of the deceased, of no use to them, they would be comforted by the receipt of $10,679.48 from his estate, which would not have been there if he had paid the company all cash." (pp. 15 16.)

We demur to the quiet assumption that the insured would make one per cent. more than he pays to the company on his notes. The rate on the notes allowing for its being paid in advance is 6 4-10 per cent.; we question much if men on the average make so much as this on a small sum, such as $60, which is half the average premium. We think the stockholders of the Grand Trunk Railway, for instance, would be glad to get even a sixth part of this rate of interest on their investment. We should like to have seen the calculations by which Mr. Wright arrives at his figures, as without them we are obliged to guess. We presume then that the $7,103.88 is the amount which the insured pays beyond what is necessary to cover the risk from year to year during the 40 years. If so, it is curious that so acute an actuary as Mr. Wright should fail to see that a properly conducted all cash company would have returned this sum, except the last three or four premiums, in the shape of dividends, so that the insured would have had the control of it, just as under the note system. It is this fact which assimilates the two systems and which seems to be systematically ignored, so that it is generally imagined that there is far greater difference between them than is actually the case. If, however, the $7,103.88 is not payment beyond the risk value, but is a portion of what goes to pay for the risk, so that the notes would be outstanding at death, then to this extent there will have been a failure of insurance during the 40 years, and the insured will get only $2,896.12 at death—the cash payments made being sufficient only to insure to that extent. If this be what Mr. Wright intends, then it is even more curious that he should not perceive that his argument, pushed to its logical extreme, is utterly destructive of life insurance; for if it be so advantageous for the insured to keep the $7,103.88, and invest it himself, why ask him for any cash payment? Why not let him keep the rest, and comfort his widow with the additional

compound 1 per cent on that also? In short, why insure at all? To this Mr. Wright would probably answer, that the object of insurance is to cover the risk of an early death; this we deny, and reply, that the case of an early death is an exceptional one, and that life insurance is intended to provide not for exceptional but for average cases. The upholders of the note system seem to us involved in this dilemma. Either the notes given will be paid by dividends or they will not; in other words, the notes are necessary or they are not. If necessary, then they will be outstanding at death, and to the amount of them the life will not have been insured; if not necessary, then why go through the farce of giving them for the purpose of cancelling them in a year or two, by dividends.

We have always been under the impression that one of the main objects of Life Insurance was the very one which Mr. Wright appears to think so absurd, viz.; as a sort of Savings Bank, and that those who had once entered into an insurance contract should feel partly bound in honor to carry it on to the end for the sake of their families or others who might be dependent upon them, their creditors &c. and partially to prevent them from spending their means wastefully and extravagantly which, in spite of Mr. Wright, we believe that the majority of men are somewhat apt to do. A commoner case even than these, is that of a man with a family, having about enough to live upon, and who without an insurance, would infallibly live up to his income, but who on insuring his life would probably pinch himself so as to keep up the policy. We freely admit that there are cases when it would be a boon to a policy-holder to be allowed to withdraw partially or wholly from his bargain, as where he becomes too poor to keep it up or where his family have died and no one remains dependent upon him but such cases are exceptional and besides are not Life Insurance, and are therefore beside the question under discussion, which is not what beneficial bargains of any kind men may enter into, but which is the more or less beneficial mode of Life Insurance, in other words, the securing of a certain specified and ascertained sum of money at death.

Communications.

THE EXPORT OF CANADIAN PETROLEUM.

To the Editor of the Monetary Times.

SIR,—In a letter which appeared in your valuable Journal of the 17th September, I endeavoured to show some of the advantages to be derived from the export of Canadian Petroleum, and since then it is pleasing to note that a movement has commenced in that direction. The Canadian Land and Mineral Company operating at Petrolia, advertised last month for a vessel to carry 2,500 barrels of refined petroleum from Hamilton, Ont., to London, England, and have, I believe, since made a considerable shipment. A contemporary of the 10th inst. says, that "a few of the refiners are making a very superior article of refined oil for exportation to Europe. An effort has lately been made to open up a market in Europe for the crude article. The prospects of opening up a market there for both crude and refined, were never better than at the present moment." Mr. Macrea, the Oil Broker in Liverpool, an acknowledged authority upon the subject, recently published a letter with regard to Canadian petroleum, in which he advised the exportation of the best refined oil, but did not encourage the shipment of crude. There may, however, shortly arise a large demand for the crude oil, in consequence of the marked success of experiments lately made in Europe for burning crude petroleum on locomotives in the place of coal. The last *Illustrated Times* contains an illustration of the Emperor Napoleon riding on the engine of a railway train, for the purpose of personally examining the apparatus for using petroleum as fuel. On this occasion the train travelled a distance of 18 miles, and the method of raising steam by means of liquid fuel, was pronounced to be completely successful. The importance of these experiments cannot be overestimated, for should petroleum be generally adopted as fuel for locomotives, it would be found still more advantageous for steam vessels, and the demand for these purposes would be enormous.

Objections have been urged to the shipment of oil direct from Sarnia to Europe, but it would seem that the difficulties are more imaginary than real. The Cleveland *Herald* gives an account of a cargo of oil sailing direct from Cleveland to Liverpool. It says, "The Etowah, of Liverpool, is now loading with refined petroleum direct for Liverpool, at the dock of Thomas Walton. The cargo will consist of 2,000 barrels of oil, manufactured in Cleveland—this is the third or fourth cargo of oil that has been shipped direct to Liverpool from Cleveland. The previous ventures of this kind have proved profitable, and we have no doubt the present one will result the same way." If oil can be shipped profitably from Cleveland, how much more profitably from Sarnia? There are no more difficulties of navigation to contend with from Sarnia than there are from Cleveland, and a cargo of oil for Europe could be dispatched just as easily from one place as the other. The difference in price, however, in favour of Canadian oil is so great that it is surprising no business has hitherto been done in exporting from Sarnia. A refiner, provided he had his own wells, could lay down refined oil in Sarnia, ready for shipment, at $4 per barrel (including the barrels). I have not statistics to show what the exact price of refined oil would be in Cleveland, but it cannot be very much less than in New York, where the present price per barrel is equal to $9.50 in gold. Supposing the price in Cleveland to be $8, this would be double the cost of oil at Sarnia, which is only a day's sail further than Cleveland. Under these circumstances, it is astonishing that Canadians have so long allowed the whole export trade of petroleum to be monopolized by the United States, but it is hoped they are becoming more alive to their interests, and that a new era is about to dawn on the Canadian oil trade. The American oil regions, in consequence of their immense export trade, are flourishing beyond all precedent. Pleasantville, which is now one of the best producing districts of Pennsylvania, has grown into a city within the last few months. The Cleveland *Leader* says: "that mammoth hotels, theatres, boarding houses, restaurants, stores and saloons, have sprung up in every direction, and the building of the city still goes on. It is very fascinating, this oil business. Fortunes are made in a month, a week, sometimes a day. Territory sells from $500 to $2,500 per acre, according to location. Town lots for building purposes rent from $200 to $1,000 per year." The villages, in Enniskillen, present a sad contrast to this picture of prosperity, but no other conclusion can be arrived at but that the difference is owing only to the want of enterprise in our country, and should the same attention be given to our oil regions, there is no reason why they should not be as flourishing as those in Pennsylvania. The Titusville *Herald* has the following excellent remarks upon the petroleum trade:—

"While cotton, grain, tobacco, and other leading agricultural staples of the country combine are universally regarded as the basis of industry and commerce, little is said of petroleum in connection, notwithstanding the fact that there is probably as much money involved in the last mentioned commodity as in any other single article of home production. Petroleum, indeed, has become a product, not only of the first necessity, but of the first importance, at home and abroad; each succeeding year since it became a considerable article of commerce, witnessing increased consumption in every civilized part of the world; and every year seems to develop new methods for its utilization. It is not only almost universally employed as an illuminator, but in the manufacture of soap, candles, wax, lubricating substances and dye-stuffs, and as a motor, it has become of essential use. After the first flush of excitement attending the discovery of petroleum in Pennsylvania, grave fears were entertained that there might be, sooner or later, an exhaustion of the supply, but these fears have been dispelled by succeeding years, during which there has been an increase of production commensurate with the increase of consumption. Petroleum has been discovered in various parts of the world, but thus far the wants of commerce have been mainly supplied by the United States, which has a practical monopoly of the trade. The exports of petroleum from New York, since the first of January last, are, in round numbers, 43 million gallons, against 23 millions for the corresponding period last year. From the whole of the United States the exports to date from first of January, are, 79 millions of gallons against 49 millions for the same period of year, being an increase of about sixty-three per cent. The great bulk of the exports are from New York and Philadelphia, though most of the business at the latter port is on New York account. The increase of exports this year is mainly to Continental Europe. Leaving out France, which takes crude almost exclusively, most of the exports to Europe consist of the refined article, which is not only safer to transport (as may be gathered from the fact that vessels carrying crude are subject to an extra insurance premium of 3 or 4 per cent.), but is really cheaper to the foreign buyer and consumer.

As to the risks incident to the transportation of petroleum, there appears to be a great diversity of opinion, though as between crude and refined it is obvious that the former is by far the more inflammable, and therefore more dangerous to convey; but if the fear of accident was allowed to operate to the prejudice of common carriers, a severe blow would be inflicted upon commercial interests. Considering the immense conveniences afforded by petroleum, the accidents directly or indirectly chargeable to the article, it must be confessed, have been proportionately small. Petroleum and its products may be safely transported when not exposed to heat beyond a certain recognized degree, and when carried under proper regulations of packing."

It is hoped that before another year, Canada will take care to secure for themselves a fair share at least of this great trade.

Yours, &c.,

PETROLIA.

—The schooner *Sailor Boy* was the only vessel chartered at Chicago to carry a cargo of oats to Boston direct, via the St. Lawrence and round the coast—the first cargo of oats ever shipped to Boston by this route from Chicago. On her arrival at Boston this vessel will engage in the grain carrying trade between that port and New York.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Oct. 19, 1868.

Trade has been quiet during the week. I regret to notice the failure of two well-known jobbing firms in the grocery trade, Jeffrey Bros., and Forster, Moir & Co., and McCulloch, Jack & Co., in the dry goods trade. There are, as usual, rumors of other firms, but it would be impolitic to give any credence to them till a failure actually happens. It only unsettles confidence, does no good, but on the contrary, often produces much mischief. Since my last there has been the annual meeting of the members of the Corn Exchange. The report did not contain anything of a striking character, being chiefly composed of statistics of the movements of produce, here, in the States, and England; as these figures have been published before they will be of very little interest to your readers. I give the stocks of flour and wheat in the hands of millers and in store here on the 14th October:—

	1868.	1867.	1866.
Flour, brls,.....	40,331	29,972	27,802
Wheat, bu,.	111,854	84,155	39,900

Quantity of flour inspected 1st January to 1st October:—

	1868.	1867.	1866.
Brels...	274,330	279,926	139,569

Our produce market has been very dull during the week, and the tendency of flour and wheat is still downwards. Strong bakers' flour has sold at $5.25 to $5.40, ordinary to good supers range from $5.10 to $5.20. There has been a tendency to speculate, but it is checked by the feeling that the lowest point has not yet been touched, and therefore till such is the case any purchases for the future would be dangerous. The same remarks apply to wheat. Latest quotations are: Upper Canada spring, $1.19 to $1.20; Red Western, $1.25; Chicago No. 2 is nominal. In coarse grains there is some stir in barley, and the price paid is $1.43 to $1.45, according to quality. In provisions and dairy produce not much is doing; the price of butter has fallen owing to a great cessation in the shipping demand, good shipping parcels have sold at 21¾c to 22c, but choice dairy for family use remain nominally at late high prices.

Groceries.—Our market has been quiet with the exception of teas and sugars, in both of which a fair business has been done. Salt and fish oils, in which recently there has been considerable speculation, have quicted down, and prices have receded from the highest point. Some large auction sales are advertised for the end of the month, which may impart some activity into the trade. I give the imports of the leading articles from 1st January to 1st August, our Custom-House returns only being made up to that period:—

	1867.	Val.	1868.	Val.
Coffee.....	248,552 lbs.	$37,483	233,013 lbs.	$29,387
Fish.....	2,161,387 "	95,549	1,900,681 "	74,268
Brandy...	145,571 gal.	152,251	123,700 gal.	144,609
Gin.....	156,886 "	66,633	153,634 "	70,486
Rum.....	23,566 "	10,234	36,425 "	14,437
Molasses..	1,069,016 "	14,986	1,412,217 "	27,646
Sugars....17,131,288 lbs.		654,687	21,048,570 lbs.	933,228
Tea.....	2,288,083 "	1,131,747	1,981,901 "	683,658

Dry Goods.—The fall trade is pretty well over as buyers are chiefly engaged in sorting up stocks. Our importers have hardly yet made up their sale books so as to arrive at drawing an average of the business done as it compares with former years. Taking generally they speak of it as a healthy one, which though light is still in excess of the anticipations held during the summer. The most unsatisfactory branch has been that of Canadian manufactures. Our markets have been overstocked with heavy descriptions of woollens, and as we have no outlet for them out of Canada manufacturers have had to put up with considerable losses to push off their surplus stocks; this state of things will soon remedy itself, but for the present, the losses are in many cases severe. Fine Canadian manufactured woollens, such as fine tweeds, cloths, &c., have found ready sale at remunerative prices, the great falling off of the imports of these goods having given an expansion to our home trade.

Hardware.—Contrary to the activity usually noticeable at this period of the year, the past week has been very quiet, but as the fall fleet has now mostly arrived, and stocks are ample and well assorted, we may look for increased activity till the close of the navigation. Prices remain very firm.

Boots and Shoes and Leather.—There has been a good business doing in all these branches. The manufacturers of boots and shoes are comparatively active, and the bulk of their heavy stocks are by this time worked off. Prices of all staples have not receded, as it was at one time feared would be the case; this has caused greater liveliness in the leather market.

Toronto Market.

For the week past the weather has been fine, considering the stage of the season. Indeed, ever since the fall trade commenced, there has been nothing to complain of on this score. To this circumstance and the fine state of the country roads, the now undoubted success of the fall trade may, in a great measure, be attributed.

Dry Goods.—The season is now pretty well over, and both importers and manufacturers express themselves satisfied with the results attained. Sales of all classes of goods have been fully up to expectations, which has had the effect of reducing stocks to a point that rids importers of any anxiety or inconvenience. A still better feature of the trade is found in the fact that payments from country merchants are now very good, and have been so since the commencement of the current month. It is said that the remittances for October will fully double those of September, which were not considered at all up to the mark. Importations show a large falling off on last year, and it seems now probable that importers have rather underestimated, if anything, the wants of the country.

Groceries.—Trade is unsettled, owing to the serious failures in Montreal. There is little change in prices from last week.

Boots and Shoes.—Business continues very active, taxing to the fullest extent the resources of Manufacturers. Prices remain about the same. A gratifying feature in the trade is the steady acquisition of new customers, a great many names having been added to those on the books of our manufacturers, since the commencement of the present season.

Leather.—The market is rather dull. *Hemlock calf*—None offering, and there is no demand for lots; small parcels have been taken at 50 to 60c. *Splits*—A large sale occurred on Tuesday at 20c. For further quotations see our price list.

Grain.—*Wheat*—Receipts 36,984 bushels, and 15,780 bushels the previous week. There is a good supply offering, and the market is dull and steady. Sales of 12 car loads spring were made at $1 13 to $1 14, and of fall at $1 18 to $1 35 according to quality. *Barley.*—Receipts by cars 38,000 bushels, and 35,474 bushels the previous week, and 15,000 on the street. Market irregular and unsettled, opening at $1 48 to $1 50 and closing dull at $1 40 to $1 43; sales about 50,000 bushels at current rates. *Peas* dull at quotations, no sales. *Oats* firmer, offering at 52 and buyers at 49½.

Flour.—Receipts for the week 2,150 barrels, and 1,825 barrels the previous week. Market dull; superfine offering freely at $5 to $5 15, with buyers at $5 to $5.10; sales two or three lots at $5.10, 100 barrels extra sold at $6 25.

Provisions.—*Butter*—Quiet at 22c. sale one car-load at that price. *Cheese* offering at 11¼c. by the car-load. *Eggs* selling at 15c. to 17c. *Mess Pork* is held firmly at $24 50 to $25. *Hogs*, live sold to a considerable extent at 5¼c. *Potatoes* selling at 50c. to 60c. by the car-load.

Freights.—The rate on flour to Montreal by steamer has advanced to 25c. and is firm, with plenty of down freight offering. Grain by steamer pays 8c; the propeller St. Lawrence is loading for Montreal at that figure. The steam barge Dromedary is loading at Hamilton with barley for Quebec at 10c; this is the first barley we believe that has gone east by vessel this season. Provisions to Europe pay about 56s. sterling; barley to Oswego 3½c. American currency, to Toledo 5c., to Chicago 7c; lumber to Oswego $1 50 to $1 75.

Halifax Market.

Breadstuffs.—Oct. 13.—The flour market still continues dull and depressed. Some holders forcing sales Canada No. 1 $6.75 to 6.80; we have heard of sales under quotations; (we note sale of city brands of No. 1 at Montreal at $5.25 to 5.30 for delivery within a short time. Extra Canada $8 to 8.20; extra State $6 to 7. Cornmeal dull at $4.60 to 4.70 for kiln dried; $4.50 for fresh ground. Oatmeal $7.75 to 7.80. Imports from January 1st to October 13th, 1867 and 1868:—

	Bbls. Flour.	Bbls. Cornmeal.
1868.	138,807	41,945
1867.	146,439	30,566

Fish.—We have no change to note in fish this week. Codfish may be quoted at $4 for large, and $2,80 to 3.20 for small. Labrador, a small lot in unsold. Bank and Bay none. Haddock $1.70 to $2. Herring, good Shore and Labrador in demand at $4 to 4.50. Mackerel, Mo. 1 $9 to 10; No. 2 $8 to 8.50; No. 3 large $6.25. Salmon unchanged at $14 for No. 1; $12 for No. 2, and $9.50 for No. 3.

West India Produce.—The stock of sugar is becoming reduced by shipments to Canada and United States, and sales of Cuba have been made at 5¾c in bond. An advance of ¼c was reported in Canada the latter part of the week, and holders here are firm at our quotations. Vacuum Pan none; Porto Rico 6¼ to 6⅜c; Barbadoes 5¾ to 5⅞c; Cuba 5½ to 5¾c; Centrifugal Cuba 6c in bond.

Financial.—Bank drawing rate on London 60 day sight bills 13 per cent. prem.; Private 12 to 12½ per cent. prem. New York Gold drafts at sight, 4 per cent. prem. Currency drafts 25¼ per cent. discount. Montreal sight drafts 4 per cent. prem. Newfoundland sight drafts 5 per cent. prem.—*R. C. Hamilton & Co.'s Circular.*

St. John Market.

Breadstuffs.—Oct. 13.—Receipts—From New York, 1,199 bbls. flour, 150 bbls. cornmeal, 25 bbls. rye flour; from Ontario, per Grand Trunk Railway, steamers and sailing vessels, 5415 bbls. flour; by Gulf of St. Lawrence steamers and E. & N. A. Railway, 2,407 bbls. of flour, 874 of which are for A. Gibson, Esq., Nashwaak, and are being reshipped from the railway wharf to Fredericton. This will make a total of 6,948 bbls. flour, 150 bbls. cornmeal, and 25 bbls. rye flour for the merchants of this city. We have to report a slight decline from last week's rates. Pretty large receipts, and a weak market in the West, have tended to depress prices here. Holders seem anxious to effect sales, and buyers hold off in the anticipation of a still further decline. We hear of few large lots changing hands, purchasers, for the most part, confining their orders to small parcels. Buyers from the country districts have not yet commenced to lay in their winter stock, and all these circumstances combine to render the trade dull. We quote, $6.60 to $6.75 for supers., $7 for choice. Cornmeal has declined and is now held at $4.50.

Sugar and Molasses.—We have no arrivals to report the past week. In molasses there have been several transactions, and this article enjoys a brisk competition. At an auction sale of Barbadoes one or two small lots were sold on a basis of 36½c to 37c., and the balance withdrawn. This quality suffered a slight decline, but has again rallied, and is now held firmer. It becomes more

evident, as the season advances, that the stock of strictly prime grocery molasses is barely sufficient for the demand, but the market is well supplied with cheaper qualities. For sugars there has been a steady demand without much competition, and we repeat our quotations which are maintained. Advices from the States report a further slight advance in sweets, and from Halifax we hear of still further purchases, more particularly of Barbadoes sugar, for the Canadian market.—*News*

The Cotton Crop.

The reports, with regard to the crop, which reach us this week, are most favourable. It is thought that there has been much less injury done in almost every section of the South by the rain and worms than was anticipated. Parties who have just travelled over the South-western and Gulf States report to us more encouragingly than we had expected. One usually well informed person, who has been over the field, sends a statement showing an excess in the crop this year over last year of 250,000 bales. This we are aware is above the present generally received estimate at this point, and cannot be fully credited until confirmed by reports from other sources. We think, however, there can be but little doubt but that with continued favourable weather, and a late fall, the exportable surplus will equal that for the season just closed. Some portions of the cotton growing States will evidently yield less, but the increase in others will at least make good the loss in those quarters.

Annexed is a statement showing the stocks of cotton in Liverpool and London, including the supplies of American and Indian produce ascertained to be afloat to those ports :

	1867.	1868.
Stock in Liverpool.... Bales	795,680	424,180
" London..	106,180	72,818
American cotton afloat.....	10,000	6,000
Indian "	342,490	610,240
Total.....	1,254,350	1,113,238

Of the present stock of cotton in Liverpool, 25 per cent is American, against 29¾ per cent. last year. Of Indian cotton the proportion is 42½ per cent. against 34 per cent.

Oil Trade of Pennsylvania.

The Titusville *Herald's* Monthly Petroleum Report, for the month ending September 30th, 1868, says:

Toward the close of the first week of the period under review, the production began to decline, and during the latter part of the third week, there were days when it scarcely exceeded 11,500 or 11,600 barrels. Early in the last week the decline was checked by the production of two or three new wells which were then struck, and by that of several older ones which were resuscitated. A very material increase was occasioned during the last three days, by the striking of four new wells, the production of one of which reached 400 barrels per day. The average on the 30th and 31st reached 12,529 barrels, by gauge tank measurement at the wells, or an increase of 182 barrels from the daily average of the last two days of the previous month, and of 124 barrels over that during July 30th and 31st.

During the month there were from forty to forty-five wells completed and tested. Of these but seven were failures; one produced four hundred barrels per day, and each of five others averaged from fifty to one hundred barrels, the remainder from five to forty barrels per day.

The actual production during September of forty-three gallons to the barrel, as shown by the shipments from the region by the Alleghany river and the railroad and transportation lines and from the decrease in stock on October 1st, was 344,292 barrels, or an average of 11,486 barrels. As compared with last month, the daily average shows a decrease of 495 barrels.

The following table shows the total production for September, the average per day, the production previously reported, and the average per day from January 1st to September 1st:

Total shipments of Crude for September bbls of 45 gallons each, bbls..... ..	360.032
Add to reduce to bbls. of 43 gallons each, bbls.....	16,745
Total shipment of bbls. of 43 gallons each, bbls.....	376,777
Stock on hand Sept. 1st, bbls....295,993	
Stock on hand Oct. 1st, bbls.....263,898	
Deduct decrease on October 1st, bbls	32,185
Total production during Sept., bbls...	344,592
Average per day for 30 days, bbls 11,436	
Production previously reported, bbls.....2,392,779	
Total production from January 1st to October 1st, bbls'..... 2,747,371	
Average per day for 274 days, bbls. 10,023.	

Stock of Petroleum.

The stock of Petroleum in the region continued without any considerable change until during the last three days, when it was decreased by large shipments. On the 1st instant it reached 263,808 barrels of 43 gallons each. This stock includes 175,608 barrels in iron tankage, 1000 in wooden storage tanks at Titusville, 1200 on the Hyde and Egbert Farm, 4000 at Oil City, and 2000 at Tidioute, and the stock at the wells on the hands of producers, dealers and shippers, which reached 80,000 on the 1st. The stock at the wells was increased principally by some of the produeers holding for a rise. Fully 60,000 bbls of it, however, were owned by dealers and shippers.

As compared with last month, the total stock shows a decrease of 35,165 barrels, and that in iron tankage a decrease of 51,988 barrels. The stock in iron tankage shows the largest reduction on account of unusually large quantities having been delivered into tank cars from many of the iron tanks during the last two days of the month.

The following table shows the total stock and the amount in iron tankage on the dates named :

	Am't in iron tankage.	Total stock.
November 7th, 1867, bbls..	459,000	655,000
December 7th..	480,900	620,400
January 7th, 1868.....	466,500	534,600
February 7th	480,100	541,100
March 7th..... ..	497,194	552,194
April 7th.....	486,600	559,000
May 1st	381,400	421,600
June 1st	246,100	290,400
July 1st.....	231,050	258,450
August 1st..	221,450	267,450
September 1st.....	227,573	295,973
October 1st.....	175,608	253,808

The Iron Tankage.

The capacity of iron tankage has been enlarged by the completion of six thousand barrels at Miller's Farm, and on the 1st it reached a total of 1,070,539 barrels. The capacity of tankage empty was increased 893,981 barrels. On the 1st of October, 1867, the total capacity of tankage was a little over 600,000 barrels. This shows an increase during the year ending the 1st inst. of nearly one hundred per cent. The decline in the price of Petroleum has favored the erection of additional tankage, and during the month contracts have been effected for the construction of fully one hundred thousand barrels capacity. Of this capacity about fifty thousand barrels is located at Miller and the remainder at Oil City and Titusville.

Recapitulation.

Total amount of Petroleum in iron and wooden storage tanks and in the hands of producers, brokers and shippers, bbls.....	263,808
Total capacity of iron tankage, bbls.....1,070,539	
Total amount of Petroleum in iron tankage, bbls.....	175,608
Amount of iron tankage empty, bbls	894,931
Number of new wells drilling.....	278
Daily production, bbls.	12,529

Sale of Canadian Ships in England.

By advances received by a late English mail we learn that the following sales of Canadian-built vessels have recently taken place in Liverpool, viz. :—Quorn, 1228 tons register, built at Quebec in 1865, classed A. 17 years, £5600. DeCourcy, 926 tons register, built at St. John in 1865, classed A. 17 years, $5800. Aberdeen, 374 tons register, built at Quebec in 1868, classed 3-3ds, in Bureau Veritas 7 years, £3000.

Valentia Raisins.

Respecting the yield of Valencia, the *Produce Markets Review* publishes the following letter from a prominent firm in Valencia, dated Sept. 23rd. Our Raisin crop is, as you are aware, drawing to a close, and although the total yield is estimated by various persons to be about 17,000 tons, we, ourselves, from information received, do not believe it will far exceed 15,000 tons. On account of the great drought experienced this season, the fruit is not so fine nor so even as in some previous years; but, nevertheless, it is a good, sound, keeping fruit. Up to the 11th inst, the date of our last advices, 138,705 quintals had been shipped, and distributed as follows :—112,937 to the United Kingdom, 16,578 to the United States, 6,240 to Montreal, 1,200 to Marseilles, 1,000 to Sweden, and 750 to Malaga. Owing to the late rain, a portion of the fruit has been slightly affected, and the greater part of that now remaining is of a low and inferior quality. Good, dry, sound fruit, now costs 3½ dollars and upwards.

How the "Corner" in Oil Works.

An Oil Springs correspondent of the Chatham *Planet*, a week ago said that several new refineries were building at that place, and he then thought stand would be made against the oil combination formed under Judge Higgins. In a latter letter he says the new refiners appear to have succumbed owing to threats of the combination to throw their oil on the market and ruin all concerned. It appears they have succeeded in bringing the new men into harness, with the understanding that they draw from the Combination warehouses weekly, half the quantities of oil that they could manufacture—paying for the same just what it would actually cost them to make it. This arrangement will be mutually advantageous, for the refiners will have half the quantity that they would have in case they persisted in running without any risk, and the Combination work off the large stock of oil they were compelled to purchase in order to control the market ; and it will be to the interest both to keep prices up.

Gore Bank.

GORE BANK,
Hamilton, 12th Oct., 1868. 9.t

THE PRINCE EDWARD COUNTY

Mutual Fire Insurance Company

HEAD OFFICE,—PICTON, ONTARIO.

President, L. B. STINSON ; *Vice-President*, W. A. RICHARDSON.

Directors : H. A. McFaul, James Cavan, James Johnston, N. S. DeMill, William Delong. *Treasurer*, David Bartlett. *Secretary*, John Twigg ; *Solicitor*, R. J. Fitzgerald.

THIS Company is established upon strictly Mutual principles, insuring farming and isolated property, (no hazardous,) *Townships only*, and offers great advantages to insurers, at low rates for *five years*, without the expense of a renewal This Company has existed 12 years, during which period it has adjusted all losses in a satisfactory manner. It is managed with strict economy, and affords the opportunity of insuring with safety and reliance, and at little expense, which accounts for its long standing and the successful business which it has been and is now doing.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per sent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominiou, in allotments suited to the popnlation and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York ; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secnred with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

THOS. W. JOHNSON,

ÆTNA

Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importanee of Insuring your Horses and Cattle against Death from any eause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.
At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.
HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.
A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford*; also that of the President and Secretary of the old Ætna Fire Insurance Company:

"*To whom it may concern*:.

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States, entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northam, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country, has been steadily prospering. The *Massachusetts Insur Reports* show that in nearly all important matters superior to the general average of Companies. It offe intending assurers the following reasons, amongst oth for preferring it to other companies:

It is purely Mutual It allows the Insured to t and reside in any portion of the United States and Eu It throws out almost all restriction on occupation from Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note all cash company. Its Dividends are declared annu and applied in reduction of Premium. Its Dividend in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for year the policy has been in force. The number of dends will always equal the outstanding Notes. Itpa losses promptly—during its existence never having tested a claim. It issues Policies for the benefit of ried Women beyond the reach of their husband's credi Creditors may also insure the lives of Debtors. Its Po are all *Non-forfeiting*, as it always allows the assure surrender his Policy, should he desire, the Company ing a paid-up Policy therefor. This important fe will commend itself to all. The inducements now of by the PHŒNIX are better and more liberal than tho any other Company. Its rate of Mortality is exceed low and under the average.

Parties contemplating *Life Insurance* will find it to interest to call and examine our system. Policies i payable either in *Gold* or American currency.

GRAND TRUNK RAILWAY.

The Report for the half-year ended June 30th, 1868, is as follows:

June half of 1867. £		June half of 1868. £
	The gross receipts upon the whole undertaking, including the Buffalo and Champlain lines, have	
609,121	...been	646,797
	Deduct—	
	The ordinary working expenses (being at the rate of 65·93 per cent., against 70·53 of the corresponding half of last	
529,792	..year)	£426,477
179,329		
	The renewals of the permanent way and works in the half-year debited	
54,973	...to revenue	36,020
124,356		
	Amounts paid on account for loss by fires at Sarnia	
10,274	...and Toronto.....	4,110
		466,607
	Leaving an available net balance	
114,082	...earned in the half-year of.....	180,190
	Deduct loss on American cur-	
21,554	...rency	18,882
92,528		161,308
	Or an increase over the corresponding half-year of £68,780.	
	But from this balance of...	161,308
	Must be deducted the renewal suspense debit from last half-year of	31,383
		129,925
	And the amount of postal revenue for the half-year to the postal and military Bondholders.....	17,829
	Leaving the balance of	£112,096

Applicable for the following payments, viz.:

Interest, &c., paid on lands.....	£1,579
do. on mortgage to Bank of Upper Canada	4,424
do. on loans, bankers' balances, promissory notes, European exchange, &c...	4,441
do. on British American Land Company's debentures	616
do. on Montreal Seminary debentures ...	616
do. on Island Pond debentures	2,700
Half-yearly instalment on Portland sinking fund	2,312
Atlantic and St. Lawrence lease (in full)...	31,692
Detroit line lease (in full).....	11,250
Montreal & Champlain Railway Company	10,807
Buffalo and Lake Huron " " ...	22,045
Equipment bond interest	10,779
Balance carried to next half-year's account	8,835
	£112,096

Comparing the results of the half-year with the corresponding period of 1867, there is an increase in the gross receipts of £37,676, and a decrease in the ordinary working expenses of £3,215, in renewals of £18,953, and in the amount of the damages paid on account of the Toronto and Sarnia fires of £6,164. The rate of ordinary working expenses for the past half-year being as above stated 65·93 against 70·53 per cent. in 1867. The charges for renewals, adding £31,383 placed to "Suspense Account" last December, which has now been wiped off, amount to £67,403. The loss on American currency shows a decrease of £2,672, being £18,882 against £21,554; so that the net revenue balance, after deducting this loss on the conversion of the American "greenbacks," amounts to £161,308 sterling, against £92,528 in the corresponding period of 1867. The average receipts from passengers in the half-year was 6s. 8¼d. per head, against 6s. 8d. in 1867; and the average receipt per ton of freight was 16s. 6d., against 15s. 8d. in the corresponding period of last year. The debit to the capital account for the half-year amounts only to £4,083, but as the capital account is in debt to revenue, this sum, unless new capital is raised, will have to be written off against the balance of £8,834. The charges hitherto made against capital for extra weight of rails and ballasting are now included under the head of renewals, and brought against revenue. The importance of completing the works of ballasting and improvement as soon as possible can hardly be overrated. With regard to the loss on American currency, viz., £18,882, it may be stated that the price of gold fluctuated during the half-year between 133½ and 143⅝. The total loss on American currency since 1865 has amounted to £370,203.

The following statement shows the net earnings, from 1861 to June of the present year, in mixed currency and also in sterling, and also the half-yearly and total expenditure in renewals, and the half-yearly and total loss in American currency:

Date.		Miles open.	Gross earnings.	Ordinary working expenses.	Renewals.	Rev. balance.
		No.	£	£	£	£
1861,	June	1,090	347,110	300,324	....	46,785
"	Dec.	"	419,469	323,761	....	95,707
1862,	June	"	382,902	319,556	....	63,436
"	Dec.	"	439,361	262,308	70,256	106,797

1868, June	"		18,882	†161,308	161,30[illegible]
			£370,203		£1,823,569

Out of this total profit of £1,823,500, averaging £243,142 per annum, there has been paid in cash on leased lines £874,000, and for interest and other claims £624,500, and since 1862 on the 1st, 2nd, and 3rd preference bonds and stocks £325,000.

The figures of this table exhibit in a short compass both the progress and the real nature of the special difficulties which have beset the Grand Trunk Company since 1862. The direct loss on American currency has been no less than £370,203, or equal to say three years full dividend on the first preference bonds, and besides this direct and positive loss there have been, as a consequence of the American war, indirect losses by increased wages and cost of materials, perhaps, as large as the loss on the "greenbacks" themselves, after deducting any increased receipts from higher rates for freight. The expenditure on renewals, apart from ordinary maintenance, charged against revenue, has been £781,037, with the effect, of course, of greatly improving the road. Of the 2[illegible] engines lately ordered from Messrs. Neilson & Co., of Glasgow, 21 have, at the dates of the last letters received from Montreal, arrived in Canada. The remaining four are on the way. Seventeen of the engines are now ready for work on the line, and the whole of them, it is expected, will be ready for the anticipated heavy autumn traffic. The reports received of these engines are very satisfactory. A loan to effect the purchase of them has been arranged with the Company's bankers on favorable terms, the leaders having been willing to accept a hypothecation of the engines by way of collateral security. Every effort that the Directors have made to bring about an amicable settlement of the differences of account with the Buffalo Company has hitherto failed. The Buffalo Board will neither agree upon nor allow an impartial officer of the Board of Trade to settle a deed of arbitration. Recent further negotiation through Messrs. Creak & Ritter has ended in nothing, as while the President of the Company signed a memorandum of settlement of all matters, as Mr. Creak suggested, the representative of the Buffalo Company has refused to do the same. In the meantime, the amount stated in the accompanying accounts, as being the proportion due to that Company, must be taken as rendered without prejudice. The Directors have much satisfaction in announcing that negotiations have again been re-opened for the renewal of the Reciprocity Treaty. Every effort has been made, and with considerable success, during the cessation of this treaty to open up new channels for the traffic formerly consigned to the States.

The newly developed traffic with the maritime provinces is gradually extending. For example during the past half-year the increase in the Halifax traffic is $28,256, and in the St. John traffic $26,604. The stoppage of trade with the United States has augmented largely the loss upon the Buffalo section, which, if independent, would hardly have paid its working expenses. The bonds issued by the City of Portland twenty years ago in the construction of the Atlantic and St. Lawrence railroad, amounting in the aggregate to $1,500,000, begin to fall due in December next. The amount then maturing is $200,000, of which sum it is expected there will be about one-half provided by the sinking fund attached to the loan; the other half will have to be provided by the Grand Trunk Company. The balance of the above debt, viz., $1,300,000, falls due at various periods between December next and January, 1871. As the sinking funds will, in the aggregate, only be capable of providing about one-half of the whole amount, it follows that the remainder will have to be found by the Grand Trunk. To meet this payment of say $750,000, it will be necessary to issue new bonds, either in American currency or in sterling. The latter mode would of course be preferable in consequence of the high rate of premium now paid for gold in the United States. The bonds, wherever they are issued, will be protected by a sinking fund—they form part of the working expenses of the Grand Trunk Company—and the only mortgage that takes precedence of them is one for $1,560,000. The bonds bear 6 per cent interest, per annum, payable half-yearly. The Directors as owners (themselves and their immediate connections) of more than one-fifth of the total capital of the undertaking, feel entitled to urge, most seriously, upon their co-partners that recent divisions have done much to weaken and disorganise the executive management, and to paralyse efforts to restore the property. The Directors have done all that was possible to meet unexampled difficulties, and they believe that their policy and proceedings will be found, after the full enquiry which they court, in every way worthy of approval. They have preserved the property by successfully resisting its forfeiture in Canada. They have carried the Company through the periods of American war and Fenian raids, and they now see the Intercolonial railway secured, a renewal of the Reciprocity Treaty under negotiation, and the traffic and net profit in those more quiet times resuming the rate of developement which distinguished both up to 1866, when the Fenian troubles commenced and the Reciprocity Treaty was repealed.

* In this half-year (June, 1864,) there was no loss by discount on American currency, as the "greenbacks" were employed in the purchase of Portland bonds maturing in 1866, and sold in England.

† Nearly all of which net profit may be said to have been earned on the same mileage as that of 1862. The Champlain Railway left a profit of about £7,300, and the Buffalo and Lake Huron Company a loss of £1,125, against which, however, its contribution of traffic to the main line must be placed.

THE ROCKLAND SLATE COMPANY.

The annual meeting of this company was held on the 20th, at its office in Montreal. The report presented by the retiring directors showed that during the year operations at the quarry, in the Township of Melbourne had so far advanced, that next spring the company would be in a position to manufacture roofing slate upon an extensive scale. The upper tunnel has been driven a distance of 315 feet, chiefly through solid rock, meeting the slate at a depth of 81 feet, and a shaft 56 feet in depth to connect this tunnel with the pit above is nearly completed. The surface of the quarry has also been largely cleared and prepared for manufacturing operations next season. The slate met with has a beautiful bluish black hue, splits with great facility, is free from cracks, and has no indications of being crossed by veins of quartz or other minerals which might diminish its extent. Operations are now performed entirely by contract. The present contractor has been working by night as well as by day on the overlying rock.

The quantity of slate manufactured during the year has not been large, as the chief object of the directors has been the preparation for large manufacturing operations next season. Regarding quality, the slate from this quarry has a uniform bluish black colour, is free from lime and iron which would on exposure cause deterioration, has an even cleavage, is very light and from its non-absorbing water, is unaffected by frost. A growing preference is being evinced for slate as a roofing material.

The officers and directors of the company for the ensuing year are: President, Peter Redpath, Esq.; Directors, Messrs. T. Sutherland Stayner (Toronto), W. C. Baynes, Geo. A. Drummond and Thos. Frizzle (Melbourne); Secretary-Treasurer, A. T. Drummond.

TORONTO CONSUMERS' GAS COMPANY.—At the annual meeting of the stockholders of this company, held on the 26th October, the following gentlemen were elected directors for the ensuing year:—Messrs. E. H. Rutherford, J. Austin, C. Gilmour, J. T. Smith, L. W. Smith, J. Mead, J. Henderson, Hon. W. McMaster, Recorder Duggan, W. Cawthra, John Eastwood, and J. Lepper. At a subsequent meeting of the Board of Directors, Mr. E. H. Rutherford was re-elected President, and Mr. James Austin, Vice-President.

Financial.

THE GORE BANK.

The report of the Committee appointed to investigate the affairs of the Gore Bank, under authority of the resolution of the shareholders passed at their annual meeting of 3rd August is as follows:—

In assuming the office assigned to them by the foregoing resolution, your Committee felt that they were undertaking a very difficult and responsible duty, and while resolving to perform it faithfully, to the best of their ability, they were very anxious not to lay themselves justly open to the charge of having exceeded it.

2. It would, therefore, have been satisfactory to their minds, had that clause in the resolution which requires them, in addition to the valuation of the assets, and the preparation of a statement of losses, to report upon "*the condition of the Bank's affairs in general*," been accompanied by some intimation of the points, to which the attention was expected to be specially directed. In the absence, however, of any such specific instructions, they have felt themselves bound to examine and exhibit such information, and such only, as seemed in their judgment to be necessary to enable the shareholders to obtain an intelligent view of their actual position, and to assist them in deciding upon their future course.

3. Three of the agencies, namely, Lo[illegible], Guelph, and Paris, having been closed shortly before your Committee commenced their duties, they proceeded, in the first instance, to investigate the remaining three, namely, Simcoe, Galt and Woodstock.

4. The cash, bills, and accounts were found to be correct, with the single exception of the deposit receipt account at Woodstock, the amount of which, through the non-production of some of the receipts entered as paid, could not be satisfactorily ascertained.

5. Had a regular and efficient system of inspection of the Agencies been in operation, an irregularity of this nature could scarcely have occurred, or great trouble would have been spared.

6. The business of Simcoe and Galt appears to your Committee to be conducted with much care and judgment. The Agencies not having any separate circulation of their own, and the balances accruing from cash deposits not appearing in the books, it is impossible to come to a very definite conclusion as to the results of their operations so far as under the circumstances they can be. Your Committee are of opinion that, from the establishments just mentioned, the Bank may

ed a fair profit upon the amount of capital
oyed, while the losses incurred there have
comparatively insignificant.

7. At Woodstock the business is far less satisfac-
; a large number of the Bills Discounted are
f a desirable character; the collateral securities
by the Agency against current transactions
n most instances, of very questionable value,
he bad and doubtful debts have unfortunately
ed a considerable sum.

8. After completing the inspection of the agencies
committee commenced on the 31st August
the investigations at the head office, preparing a
eneral balance sheet to that date.

9. As the present Directors had recently count-
e treasury cash, your Committee did not
e it necessary to repeat that operation, but
cted the certificate of the President as to the
nt on hand. The cash in the Tellers' charge
examined in detail, and found quite correct.

1. Your Committee have also verified all the
ounts as far as it was possible for them to do so.

1. The mode of cancelling Deposit Receipts
defective, and no suitable registry of them
g been made at the Head Office, till the ap-
intment of the present Cashier, it was found
acticable thoroughly to check this important
unt. All the transactions however, since July
t, 1863, have been carefully examined, and
ugh, in some few instances, the Paid Receipts
r to have been accidentally lost or mislaid,
Committee having inspected the entries in
ooks kept by different officers, and which
y checks upon each other, see no reason to
that the amount shewn as outstanding is
rect.

1. The balance of the Note account agrees with
information extracted from the Note Register,
is proper to remark that this book, which
dopted at the establishment of the Bank, is
nsufficient for the purpose, and yet no suita-
egister could have been opened within the
ve years which would have been of much
as applied to the present issues of the Bank.

1. The Charges account at the several Agencies
to be moderate in account, but on examining
oks and transactions, and enquiring into the
of the Officers at the Head Office, before
June last, your Committee are of opinion that
ller staff might have been employed, without
interfering with the efficient discharge of the
siness.

1. They did not observe any other items of
penditure that call for remark. Several sums,
wer, amounting in all to about $3,800, have
ered to the account erroneously during the
nding 30th June, 1868, $2,400 belonging to
harges" of former years, and about $1,400 to
tue bills, or other accounts.

1. Much time and pains have been expended
ur Committee, in the endeavour to produce a
rt valuation of the various assets of the Bank,
hing (besides cash) real estate, mortgages, past
d current bills, and other securities. Their
uiries have, to a great extent, been pursued
art from each other. Their information, when-
ver needful, has been obtained from several relia-
e independent sources, and their object has been
ge, as far as practicable, what may be fairly
ed the cash value of each asset, were ordinary
erations used to realize within the space of a few
ths.

Your Committee, however, wish it to be under-
that their valuations of real properties and
rtgages are based upon the assumption that the
are all in a satisfactory state. They also
it important to add that as, in some cases,
olicies of insurance upon buildings are not
by the bank, its claims, in the event of loss
, might be seriously jeopardized.

1. Your Committee, annex, as required by the
ction, "a detailed list of all the losses of the
since the 30th June, 1861, to the 30th June,
composing both those which have already
written off, amounting to $193,595.57, and the
ount, $287,704.73, alluded to in the Report sub-
mitted to the annual meeting on the 3rd August last, and which still remains to be disposed of.

17. And that the final result of their labours may appear, in as compendious and intelligible a form as possible, they have furnished a statement of Liabilities and Assets, made up in accordance with what they believe to be the present position of the Bank.

18. If would have afforded them the most unfeigned satisfaction, could they have conscientiously been able to present that statement in a shape more favorable to the shareholders.

19. Your Committee are well aware how easy it is to be wise after the event, and how extremely difficult properly to estimate the merits of transactions, which were negotiated under circumstances that have ceased to exist. Some points, however, of mistaken judgment appear to them so singular and inexplicable, that it would be wrong to pass them without notice.

20. While, therefore, they deem it just to remark that a large proportion of the losses incurred is to be ascribed to the errors and misfortunes of a comparatively remote period, they consider that they ought not to conceal the fact that some of those errors have been perpetuated by the Directors to a recent date, and followed by disastrous consequences, through their failing to maintain a prudent proportion between the capital of the Bank and the extent of its individual risks, and also through the want, in some instances, of a sufficient regard on their part, to the adequacy and the available character of the securities, upon which important advances were made.

21. In concluding their report, your Committee feel that they would be evading a grave, though very painful obligation, were they not to express their decided opinion that very much of what is now, for the first time, known to be lost to the Bank, ought to have been long since written off as bad, and that a great part of the remainder should have been treated as of extremely doubtful value. And they deem it to be a subject for the deepest regret that the late Directors should not have seen it to be their imperative duty, both for their own sakes, and in the interest of all concerned, fairly to confront the difficulties with which the institution has been long beset, and to bring their published statements into harmony with the actual facts of the case.

All of which is respectfully submitted.—George Taylor, F. M. Willson, W. F. Findlay.

General Statement of the Affairs of the Gore Bank as on the 31st August, 1868.

LIABILITIES.

Capital	$309,280 00

Profit and loss	315,466 57
	$1,222,561 96

Hamilton, Oct. 17, 1868.

The Director's report is as follows:

The Directors, in forwarding the report of the committee appointed by the Shareholders at the annual meeting held on the 3rd August last, at the same time transmit a report from themselves upon the present condition of the affairs of the Bank. It was found advisable to close the agencies at Guelph, London, and Paris, which has been done accordingly, and all outstanding accounts transferred to the office here. The Directors regret that the affairs of the Woodstock Branch were found in an unsatisfactory state; they therefore relieved Mr. Park, the Manager, from his position. After this occurred, it was ascertained that he had misappropriated the funds of the Bank; the loss, however, will be recovered from his sureties. The cash in the treasury has been counted by your Directors, and found correct; the cash at all the Agencies, including those closed, was also found correct. Your Directors have considered the question of Staff carefully, and concluded that a reduction of four officers at the head office could be made without impairing the proper management, which has been done. Your Directors have gone carefully over the assets and liabilities of the Bank, which, it will be seen, substantially agrees with what has been furnished by the committee—the difference, in a great measure, being accounted for by subsequent collections, of which explanation will be given at the meeting. The balance of $500,000 (in round numbers) is actually available to the Bank, without taking into account the gain which will accrue to the Bank by the loss of its notes in circulation, which, it is thought, will be very considerable.

Every debt considered bad has been written off, and ample allowance made where any doubt existed as to the value of an asset. The paper discounted at the other banks, referred to in the report of the late Board, amounting to $73,000, has been paid at maturity, without assistance from this Bank. The disposal of the properties held by the Bank has been vigorously prosecuted, with very satisfactory results, the sales amounting to $18,975, at the valuations given in our statement, the funds being made available for banking purposes. Your Directors have every reason to hope that after public confidence has been restored, (which, it is fully expected, will result from the publication of your committee's report,) to regain much of the lost business, which was of the best character, and to open a wider field for agricultural loans in small amounts, in addition to their ordinary business. In view of the reduction of the capital to its present amount of—say $500,000—it will be necessary for the shareholders to consider what course they will adopt, as the charter prevents the payment of dividends, until the amount of subscribed capital shall be fully made up. The Board having elected Mr. Æ. Irving, President, and that gentleman having resigned shortly afterwards, the Hon. Samuel Mills was unanimously elected President. Mr. W. G. Cassels having sent in his resignation to the Board, which they accepted, it is not their intention to continue the office of cashier, which duty will be performed by the party to be hereafter selected to fill the office of Manager. Mr. Cassels, however, has consented to retain office in the meantime. In conclusion, your Directors consider it will be to the interest of the shareholders to take the necessary steps to alter the name of the Bank to that of The Bank of Hamilton. Edward Martin, President, T. Mellwrath, Vice President, C. McQuesten, Wm. Hendrie, Samuel Mills, Wm. McMillan, John Waldie.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Although money has been easy for the past week, little business has been done in stocks or bonds, in consequence of so few investments offering.

Bank Stock.—There were sales of Montreal at 135¾. Ontario is in demand at 101. Toronto sold at 117. Partially paid up Royal Canadian is offering at 89½ to 90, and paid up at 91½ to 92. Commerce is enquired for, but none in market. There were sales of Gore at 30 during the week; sellers now asking 35. Merchants is in demand at 106 to 107. For City, 104 is offered. There are buyers of Du Peuple at 105 and under. Jacques Cartier sold at 108. Other banks nominal.

Debentures.—Dominion stock and sterling five and six per cents are in great demand at quotations. Toronto are offering to pay 6⅞ to 7 per cent. interest. Short dated, first class County are offering to pay 6½ per cent.

Sundries.—Canada Permanent Building Society is in demand at 121½; Western sold at 114½; Freehold not offered. Montreal Telegraph is again lower; buyers now only offer 125. British America Assurance sold at 56. First class mortgages are much enquired for. Money is freely offered, but very little first class paper is to be had.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Oct. 27, 1868.

There still continues an abundant supply of money, and the Banks are discounting all good paper freely; good business paper ranges from 6½ per cent. to 8 per cent. according to the names and length of time to run. On the street very little is offering. The Banks have ample means to meet present wants of trade, they being lighter than usual, and remittances from the Country having lately been more abundant, our merchants are not pressed either to force sales of goods, or to demand any extra accommodation from the Banks. On the contrary during the winter months when business is dull, it will be somewhat difficult for the Banks to find investments for their surplus funds at the rates now current. The amount of stocks offered during the week has been small, and generally placed on the market at rates above the ideas of buyers. There exists a steady demand but the prices of favorite stock are so high as to cause very limited sales. Bank of Montreal sells at 136 to 136½, but now buyers ask 137½. Merchants, in demand at 106¾, but sellers firm at 107 Peoples has fallen and buyers only offer 104½. Ontario asked for at 101, but held firm for 102. Toronto nominal at 117. The books of the Banks National and Mechanics' are closed, and the Ontario offers a dividend of 4 per cent for the half-year.

THE NEW YORK MONEY MARKET.

At the beginning of the week money suddenly assumed an extreme stringency. On Tuesday, brokers found it difficult to supply their wants within the legal limit of interest, and for the last three days the rate outside the banks has been very generally 7 per cent. in gold, and even as high as ⅛ per cent. per day has been paid by needy borrowers. Yesterday and to-day stocks have been very generally purchaseable at ⅛ per cent. lower for immediate delivery than upon regular terms, which fairly indicates the scarcity of money. The movements at the Clearing House have very plainly indicated that efforts have been made by speculative combinations for holding money off the market, in order to break down the prices of securities; and other collateral evidence goes to establish that conclusion beyond question. It is impossible to form any satisfactory estimate as to the extent to which these operations have been carried. It is, however, to be remembered that, when they were commenced, the market was in a condition to be much affected by slight interference. This artificial meddling with the market has caused considerable feeling among the banks, especially as their own reputation is indirectly affected by the fact of certain bank managers having at least tacitly concurred in the operations. It was suggested in some quarters that the associated banks take combined action by formally agreeing to use their legal reserve in order to defeat the movement, and in that way make a practical protest against the proceedings. This proposal, however, appeared likely to create some unpleasant opposition in the Clearing House association, and was consequently abandoned. Nevertheless, some of the banks have, for the sake of protecting their customers, fallen back upon their legal tender reserve. This action has, to some extent, counteracted the "tying up" operations; and a contraction has also come from speculators desirous of protecting their stocks, by placing money upon the market. The fact, however, that notwithstanding these counteractions, money remains very stringent shews that, apart from artificial causes, the market is in a condition affording poor promise of an early return to ease. No relief of importance is to be expected from outside sources, the money markets of the interior cities being in a condition little different from our own.—*Financial Chronicle*, Oct. 23.

BANK OF ENGLAND.

	Oct. 10, 1868.	Oct. 11, 1867.
Bank rate of discount	2 per cent.	2 per cent.
Bank reserve	£11,060,030	£14,581,999
Bank stock of bullion	30,707,945	24,109,034
Price of Consols	94¼	94¼

The Bank return exhibits a considerable decrease in the stock of specie, as well as in the reserve; the falling off in the former case is £293,191, and in the latter £559,836. The other deposits have undergone a considerable diminution.

The following are the particulars as compared with the preceding week:

Rest	£3,622,719
Increase	999
Public Deposits	5,306,623
Decrease	78,672
Other deposits	18,022,446
Decrease	712,671
On the other side of the account:—	
Government Securities	£15,039,716
Increase	99,585
Other Securities	16,054,128
Increase	312,564
Notes unemployed	10,045,020
Decrease	460,785

The amount of notes in circulation is £24,647,912, being an increase of £256,642.

REVENUE OF CANADA.—The following is a statement of the Revenue and Expenditure of the Dominion of Canada for the nine months, from the 1st January to the 1st October, 1868. The result goes to confirm Mr. Rose's prediction, that there will be a surplus on the financial year:—

	REVENUE.	EXPENDITURE.
January	$ 856,903	$1,063,627
February	597,942	782,529
March	1,321,182	950,327
April	1,342,881	1,134,721
May	1,344,068	906,696
June	1,074,077	1,156,890
July	1,375,722	1,801,622
August	1,377,933	964,293
September	1,846,360	2,294,409
Totals	$11,137,068	$11,055,114

SHIPBUILDING AT QUEBEC.—The Commi... appointed by the Federal Government to take ... consideration the subject of ship-building ... reported the evidence, from which several extr... appear in the *Journal de Quebec*, though with... the names of the witnesses examined. This ... dence goes to show that ship-building has ... diminished at Quebec, chiefly on account of ... preference now given to iron ships, and ship... the kind called mixed—half iron and half w... Last year, moreover, the difficulties of the bui... were increased by the strike, which was of a ... far more general and better organized than ... previously been known. The cause of this ... doubtless, it is said, to be found in part in ... high cost of living, but it was really instigat... an organization in New York. Quebec ... builders, it is said, require no protection in ... sense opposed to free trade, but no new recipr... treaty ought to be concluded with the U... States without the free registration of Can... vessels being permitted in the United S... The drawback of duties on articles employ... the construction of ships is thought to be al... the builders ought to expect. As to pecu... assistance, there was no reason to believe ... Banks would make advances on ships on the s... if they were even allowed to do so. As t... differences in favour of iron or mixed over w... ships, they are said to be these: that th... classed for Liverpool for twenty at Lloyds fo... teen or fifteen years; that they last long... their yearly depreciation is less; and that, ... stronger and less liable to leak, they of cou... better. In order to build such ships at Q... it is said that at first it would be well to ... all the iron and even the teak necessary f... purpose ready for use. The cost would ... ceed $2.50 or $3 per ton and with the firs... there would be a net profit to the builder of ... ton after paying these charges. No prote... wanted; but it is desirable that Quebe... should be able to sell in all the markets ... world. Those of France are already thus c... but many are closed, especially that of the ... States, which, if accessible, would assure t... perity of the shipbuilding trade at Quebe... shipbuilders of Quebec believe themselv... entitled to that market, since American sl... now admitted to registry in England at t... rate as English and Colonial ships. The ... builders, however, fear to begin the cons... of mixed ships because of the losses whicl... attend upon the first experiments. Thos... would be made by those who built the firs... of the class, and the men who hold aloo... profit by their experience. In order, the... prevent this loss being saddled upon some... benefit of all, it is proposed that a bounty ... $4 to $6 per ton should be granted for ... four or five mixed ships that shall be bui... cost at Quebec of a good ship of 500 to 1,... classed for seven years, would be, say, £8... per ton; in the United States, £13 ster... England, £10 or £11 sterling, and one fo... years, £15 or £16. A mixed ship would ... or £18 per ton in England; but they ha... high as £22 per ton. In France, Sp... Italy, ships of oak will cost a little more ... England. In all cases the equipment of ... more complicated elsewhere than in Quebe... times there are complaints of the treatm... Quebec shipbuilders receive in England ... said these could be avoided if builders wou... take to do no more than they can do w... own resources, and then would load th... themselves, if they did not find freighte... would then save two-thirds of the co... which they now pay.—*Exchange.*

THURSDAY, OCTOBER 29, 1868.

INSURANCE COMPANIES AND LITIGATION.

To argue for the sake of proving that it is discreditable on the part of Insurance Companies to evade the payment of just claims, by taking advantage of technical objections, is one way of wasting words. Ordinary people would take that conclusion for granted. Yet the Toronto *Globe* seems to consider it necessary to approach it cautiously and by slow stages lest, we suppose, the Companies themselves or the public should be taken by surprise. We imagine that the writer of the observations to which we now refer, who has toiled severely to rear a fabric of logic for the support of one of the most ordinary truisms, is not beyond the reach of prejudice, and perhaps has not suceeeded in ridding his mind of that antipathy to Corporations, which obtains among the ignorant, whose imaginations conjure up spectral organizations preying on the vitals of the community, having neither bowels of compassion nor yet souls to be affected by the disregard of ethical rules. Every one knows that juries are merciless to Companies, and many are aware that a most improper advantage is taken of a well understood prejudice, which has its origin in a misconception of the objects of Companies as well as of their nature. Take the case of Insurance Companies. Instead of being the victims of an unreasoning antagonism they should have a standing presumption in their favour. Sir James Parke puts the matter in a clear light when he states: "Insurances give greater security to the fortunes of private people, and by dividing amongst many that loss which would ruin an individual, make it fall light and easy upon the whole society." The large amount of business done by these Companies affords ample evidence of the value placed upon the protection they afford to industry; the benefits they confer in the advancement of trade and navigation, and the blessings they shower in the path of the widow and orphan. There is impartiality, however, in prejudice Railroad Companies as well as Insurance Companies, small Companies and large Companies may all shake hands and confess themselves to be in the same box.

It is said that "a great many absurd and some impracticable conditions" are printed on the policy but never read, and that to take advantage of such loop-holes in order to evade payment of "claims, which at any rate cannot be proved unjust," is a discreditable proceeding. Fire Insurance is a contract to indemnify against loss in a certain event and on certain conditions. These conditions are sneered at by our critic. In a case before the House of Lords, on appeal, Lord St. Leonards, certainly a high authority, said: "The Court, observing how very often Companies of this nature have been subjected to frauds, will carefully guard them against fraud, and will give effect to any part of the contract which has this object. *Nay, more, it is from the very advice given in Courts of Law that the Companies have endeavoured to protect themselves, by those stringent provisions which we so usually find in policies of insurance.*" If the insured don't think it worth their while to read the conditions on which their contract rests, they are themselves to blame. It is admitted that insurance Companies have a right to protect themselves from fraud and imposition, and that it is for the interest of the community that all attempted frauds in the way of misrepresentation and fire raising should be put down; but all claims that cannot be proved by legally admissible evidence to be unjust, must be paid under penalty of the condemnation of our critic. The experience of every insurance man in the country, the experience of almost every business man of any kind, will suggest instances in which arson has been committed without legal evidence being obtainable to bring the crime home to the culprit, but yet the circumstances left no doubt on the mind that the crime was committed. The fire-raiser does not usually take witnesses along with him. When the Directors of an Insurance Company are convinced that a claim made upon them is unjust, in that the loss in respect of which it arose, was the result of a wilful act on the part of the claimant, and yet the evidence which established the conviction in their minds cannot be given in a court of law, by reason of a want of elasticity in the rules of evidence; or in case it be good and legally admissable, are they, or are they not, justified in standing strictly on their rights, and accepting from the Court the legal interpretation of their contract? Our critic says "to fight fraud by fraud and set off quirk

against quirk will never do." To set off quirk against quirk will do, and does do; as for fighting fraud by fraud, no one is foolish or wicked enough to propose it. If the writer means that Insurance Companies act fraudulently in standing on their strict rights under their contract, to ward off a fraudulent claim, nonsense has got the better of him. The following sentence has an air of innocent wisdom about it which enables one to gauge our critic's qualifications for the position of mentor: "There is no doubt that Insurance Companies are very liable to be victimized, but their great protection is simply greater carefulness in accepting risks." Carefulness in accepting risks is a good thing, and a necessary thing; but no amount of care in a country where people move about so much as they do here, where personal antecedents are not so closely followed up as, say, in England would suffice as "the great protection" to Companies, in the absence of those "absurd" conditions on the back of the policy, which are intended to be, and have proved themselves, if not "the great protection," at least the nearest thing to it. An eminent writer on law says: "The Companies intend to pay any just claim without taking advantage of any technical objection, and to make use of their defence only against what they may believe to be a fraud, although they may not be able to prove it." The Directors of an Insurance Company are a jury, and they are expected to satisfy themselves, before paying a claim, that it is just. The ill effects of an opposite course, we have already pointed out.

Well, then, what guarantees have the insured that an undue use will not be made of the power that is reserved by the Insurance Companies, and that individuals will not be harrassed from captious or improper motives? Our courts of law afford redress. Insurance companies as a rule are averse to litigation. Juries never strain presumptions in their favor. As a rule the directors who have to decide on the line of defence to be adopted, have no immediate personal interest to serve, and in most cases have no acquaintance with a claimant; hence it is unlikely that personal motives sway their decisions. They are usually men of high standing in the community, whose names alone are sufficient to command public confidence. The business of Insurance is of such a nature that a disposition to take an unworthy advantage of technicalities cannot long be concealed, and when once made known, soon reacts upon a company's welfare. Fair dealing is part of a company's reputation, and no company is so strong as to set public opinion at defiance. The probabilities are, therefore, greatly in favor of honorable treatment in dealing with Insurance Companies, and, in practice, expectation in this respect is fully realized. There may arise exceptions, but such exceptions, from the antagonism they excite, only prove the rule. To blame all for the faults of one is about as just as to rail at mankind for the malpractices of the dishonest. When we reflect on the evils that have sprung from looseness of management, and the fear of being branded as litigious, all honest men should strengthen the hands of the companies, and, as a matter of public policy, insist on every means being taken to prevent fraud obtaining the upper hand.

THE GRAND TRUNK.

The half-year's report presented at the meeting held in London, England, on the 20th instant. will be found in another column. It appears that the receipts up to June 30th amounted to £646,797, showing an increase of £37,676 over the corresponding period of last year. The ordinary working expenses were reduced from 70.53 per cent. to 65.93 per cent. of the receipts. Permanent way renewals absorbed £36,020. The available net balance earned amounted to £180,190, against £114,082 in the corresponding half of last year; the gross revenue for the whole year being £1,351,176. Taking the capital at £17,500,000, this revenue represents an earning of 7¾ per cent. on the investment. The loss on American currency, £18,882, being deducted, left £161,308. From this was deducted £31,383, the revenue suspense debt from last year, £17,829 for postal and military bond-holders, £16,688 interest charges, £31,692 rent of Atlantic and St. Lawrence lease, £11,250 rent on Detroit lease, £10,807 for Montreal and Champlain Railway, £22,045 for Buffalo and Lake Huron Railway, £10,779 for equipment bond interest, leaving a balance of £8,834. The capital account being in debit to revenue to the amount of £4,083, this latter sum had to be deducted from the revenue balance of £8,834 in the absence of additional capital. The average receipts from passengers was 6s 8½d per head, against 6s 8d in 1867; and the average receipt per ton of freight was 16s 6d, against 15s 8d. From 1861 to 1868 the total profit on working was £1,823,569; the loss on American currency, £370,203; the total renewals, £781,037; the amount paid in cash for lines leased, £874,000; for interest, &c., £624,500, and since 1862, on preference bonds and stocks, £325,000.

Certain of the bond and stock-holders, dissatisfied with the present management, having called upon the Directors to resign, a resolution was passed inviting the dissatisfied to call a special general meeting and submit the matter to the proprietors. In reply, M. Creak and Mr. Ritter recommended—

"The appointment of a Managing Direct in London, whose whole time and energ are to be consecrated to the interests of t Grand Trunk. He should be prepared visit Canada whenever required, and secure for the Board at home the m thorough control over the whole undertaki He should be disconnected with any otl business or profession, and receive a sal of (say) £1,500 a year till the 1st, 2nd a 3rd preferences are paid. That the existi arrangements in Canada should be revie at an early date. That publicity and ec omy should be carefully maintained, so t all our supplies may be satisfactory in qua and in price. That as a pledge and guaran of the adoption of this policy the Bo should agree to receive at once, subject confirmation at the October meeting, th gentlemen, at least, to be nominated by committee, without, however, adding to number of the Board in England."

The Board offered to make room for members of the complainants' committ and one bond-holder from Scotland, whe considerable amount of the property is h This concession was the result of a desir secure harmony in entering upon negotiat with the Canadian Government respec the Intercolonial, in the settlement of International Bridge question, without w the undertaking would be an "unbound got in the hands of the Anti-Grand T party in Canada." It was subsequently cluded to refer the whole matter to the ge meeting. That meeting has been held it is stated that the present management been endorsed, but the particulars hav course not yet arrived.

BREADSTUFFS.

Now that the barley crop is pretty wel of the way, and the handsome proceed farmers' pockets, it is opportune to pr facts and suggestions regarding the st wheat, which has not yet found its wa of the granaries of producers to any in tant extent. So far as the crop has offered, it has met with a dull rece Buyers and sellers cannot agree; the adhere as closely as possible to former prices, which, owing to the low quota abroad, exporters cannot pay, and the refuse to touch the article at the f demanded. As a consequence, the To market has been maintained at exceptic high rates. This could not have occ only that a local milling demand has abs the most that has yet come forward. stocks accumulate, the market must down to a point which will admit of a a small margin on shipments to f markets.

The English crop of wheat is anno on good authority equal to the crop of

gh not so good as that of 1863. Mr. es Caird, writing in the London *Times*, esses the opinion that the average will hirty-two bushels per acre, or about five els over the yearly average yield of the ed Kingdom. He estimates in harmony the agricultural returns, that there were 000 acres more under wheat this season last, or an increase in the average of t one-twelfth. Taking, then, the average per acre as above given, he figures up otal yield at 15,700,000 quarters, leaving diciency of 5,000,000 quarters to be sup- from foreign sources. That deficiency however, be increased by circumstances ering the foreign supply required fully and a-half millions. The English ers have had, as in this country, exceed- favorable weather for fall seeding, ting in a large breadth being sown with t under most propitious circumstances. this connection we may notice the in- d stocks in store at various points. In real there were on the 15th, 111,854 against 84,155 in 1867 and 39,900 in ; in Chicago on the 20th there were ,400 bush. against 754,100 last year, and 00 in 1866; in Milwaukee there were at me date 618,000 bush., against 455,000 last year; and 281,000 in 1866; in Buf- here were, on the 19th, 764,000 bush., st 300,000 bush. last year; and in New there were 760,652 bush., against 258,- st year. These increased stocks arise y from an earlier movement of the crop ear, and the prevailing mania for spec- n in western markets has kept back a deal that should have reached New long since.

king next the receipts at the five princi- estern lake ports—Chicago, Milwaukee, it, Toledo and Cleveland—we have an se in wheat receipts from 21,203,118 last year to 24,470,164 bush. this year, r two and a half millions of bushels than in the same period of the previous years. At the same time the increase r is large, rising from 2,772,996 brls. ear to 3,194,756 brls. this year, an in- of pretty nearly half a million barrels. receipts at New York tell another tale. comparison of them it appears that 2,787,375 bushels were received from ptember up to to the 20th inst., against 285 for the same time last year, show- decrease of close on 700,000 bushels. rease of nearly 80,000 barrels in flour de apparent by a similar comparison. figures corroborate the statement be- ade, that western speculators are hold- he crop for prices which shippers at t cannot pay, in the hope of forcing s for shipment and consumption to make the necessary concessions. Whether they they will succeed or succumb depends on the extent of supplies and the money resources of those who are interested in upholding the market.

GORE BANK.

A meeting of the shareholders of this bank will be held on Monday next, to receive the report of the committee appointed some time ago to examine the Bank affairs. This report and the report of the Directors, which accompanied it, are given elsewhere. For the sake of presenting at one view the state of affairs on 31st August last, we give the balance sheet annexed to the Directors' report:

LIABILITIES.

Circulation		$212,712 00
Deposits at Interest	$110,902 34	
" not at Interest	74,121 83	
		185,024 22
Balance due to other Banks		14,328 64
Unpaid Dividends		187 60
Allowed for Adjusting Exchange	1,000 09	
" Law and other Expen's	3,000 00	
" Rebate of Interest on Current Bills Discted	3,851 75	
" Incidentals	5,000 00	
		12,851 75
Balance to Cr. of Capital Account.		500,479 87
		$925,584 08

ASSETS.

Gold, Silver and Provincial Notes		$164,594 97
Cheques and Notes of other Banks		15,325 26
Balance due by other Banks		12,666 57
Bank of U. C. Certificates, (Market value)		24,715 00
$82,733 33-100 of Government Debentures, (Market value)		76,114 66
$118,800 of Hamilton Debentures, (Market value)		77,831 00
Mortgages, (Market value		40,953 00
Real Estate, "		22,891 00
Bank Premises, "		12,000 00
Safes and Office Furniture at Hamilton and Branches, (Market val)		1,500 00
Interest on Debentures to date		1,490 87
Other debts		7,650 00
Notes and Bills discounted Current	$410,131 19	
Less allowed for Loss	80,041 54	
		330,089 65
Notes and Bills discounted—past due	279,997 38	
Allowed for Loss	142,235 28	
		137,762 10
		$925,584 08

At the time the investigation committee was appointed, we dwelt upon the necessity of a careful examination and a faithful report, and we are glad to be able to express the belief that that line of duty has been followed out.

The bank has been over thirty years in existence and has had its share of the vicissitudes of fortune. Adverse circumstances affected it in 1847, but it recovered and afterwards paid good dividends. It now finds itself with about $500,000 available. The Committee attribute a large portion of the losses "to the errors and misfortunes of a remote period;" in other words, during the Dark Ages of banking in this Province its means were misused. The most serious fault of recent times has been the perpetuation of some of the errors which experience has shown to lie at the root of the difficulties with which our oldest banking institutions were beset. Bad debts which should have been written off long ago, were allowed to continue on the balance sheet, thus giving a delusive appearance to the affairs of the bank. The Committee charge the Directors with neglect of duty, in not boldly encountering the difficulties which beset the institution, and bringing "their published statements into harmony with the actual facts of the case." It came out at the last meeting that the Directors have been, all along, furnished with information as to the state of accounts which has proved the great source of trouble, and, such being admitted, we are not at a loss in placing the responsibility on the proper shoulders. If the Cashier had either acted independently of his Board, or concealed from them what was necessary to a proper understanding of what was being done, we should unhesitatingly charge him with fault. But the facts are otherwise, and the shareholders must hold their Directors answerable under the charges so distinctly made by the committee. We do not say and no one imagines that the Directors have used the bank funds for their own purposes, or that there has been intentional dishonesty on their part in publishing statements from time to time, but that they have been guilty of neglect and carelessness we take to be fully established. As to the valuation of assets, there has been much to complain of and this case may be taken as evidence of the necessity that exists for a more perfect system of audit than at present prevails.

It remains to be decided whether the bank should continue in business or go into liquidation. Taking the committee's report and all the circumstances into consideration, we hesitate not to reiterate the conclusion expressed in these columns, some time ago, that it is for the interest of the shareholders, as well as that of the public, that the proprietary should not give up the ship. The position seems to be such that the bank could at present pay off all its liabilities in thirty days. Every dollar of circulation could at once be redeemed over the counter.

The assets are of such a character that they might be realized at once. The paper held by the bank seems to be good if we may judge from the fact that the portion of it on which $350,000 were advanced by the other banks by way of assistance at a time of emergency, has been fully and promptly met at maturity. The amount of capital intact is respectable. An examination of great strictness has revealed the state of affairs, and this will be found much less "desperate" than was anticipated. On the whole, we believe that the proprietors will find it to their advantage to let the bank go on. Under careful management they may reasonably hope to regain public confidence.

Insurance.

INSURANCE MATTERS IN MONTRAL.

(From a Correspondent.)

MONTREAL, Oct. 27, 1868.

There was a large fire attended with loss of life at the Steam Mills and Lumber yard of L. Charbonneau, corner of Craig and St. Charles Borromie streets. The buildings were very much injured, and a large quantity of lumber was destroyed, the watchman named A. Vian was burnt to death, he is supposed to have fallen asleep. The fire caught from the engine. The loss is estimated at $25,000 without insurance. Mr. Charbonneau always stated that it was cheaper to insure himself than pay the high rates the offices charge on such premises ; he has now found out his mistake.

Since my loss there has been a marked decrease in the number of fires in this City, which to a certain extent may be attributed to the offering of rewards by the Insurance Companies and the City Corporation, nothing however has been elicited with regard to the late numerous acts of incendiarism. A few weeks ago an advertisement appeared in some of our City papers signed by Gillespie, Moffatt & Co., asking for applications for the Agency of an Insurance Company. A large number of applicants handed in their papers and one gentleman preferring to "deal with principals only," took first steamer to England to secure the prize. I learn that Mr. Jas. Davison, the manager of the Phœnix, was an applicant for the office, but afterwards withdrew his proposals. The 'Phœnix' will therefor retain the services of one of our most careful and reliable managers in this City.

Mr. Perry has gone west on business of the 'Royal,' and will probably be away for some months, the *double-headed* Fire Marshal will therefore enjoy peace and quietness for a time ; let us fondly hope he may enjoy it.

APPOINTMENTS.—Mr. C. J. Bloomfield has been named as the Toronto agent of the London and Lancashire Life Assurance Company. Mr. Evans, of the firm of Evans, Elmsley & Co. of this city, will represent the New York Life Insurance Company here. Both first-class men.

FIRE RECORD.—Belleville.—A fire broke out in the brick building of R. Price, grocer. The fire was confined to the second story, in which were Dr. Potts, and Mr. Bate, tailor. Potts was insured for $600 in the Lancashire which would not cover his loss. Price was insured for $2,000, also in the Lancashire, and there was an additional insurance of $2,000 on the building which, a Belleville paper says, will cover the loss.

Amherstburgh, October 22.—A telegram says : Thomas' grist and saw mill took fire this morning at five o'clock. Loss, $10,000. No insurance. It is supposed to have taken from some dry lumber that was over the boiler. Borrowman's factory was, with difficulty, saved.

Morrisburg, October 22.—Barn of Alpheus Cook, in the township of Matilda, and contents, consisting of season's crop. Loss, $1,000. No insurance.

Mariposa, Victoria Co., Ont., Oct. 11.—The Alma Mills and contents, and dwelling house of Jno. Cullis were destroyed by fire; no particulars as to insurance.

—The sum of $200 was recently sent to the Treasurer of the Vermont Mutual Insurance Co. from a confessor, through a Catholic priest.

BUILDING SOCIETIES.—Forfeiting shares. When after the death of a member of a Building Society, his shares were permitted to run in arrear.

Held, that in the absence of a personal representative, the Society could not take any steps to forfeit the shares any more than they could have enforced their claim by action, by debt, as provided by the statutes. Glass v. Hope, 14 Ch. Rep. 484.

Communications.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Oct. 27, 1868.

Since my last we have had a heavy fall of snow, accompanied by frost and high winds, and the snow has not yet wholly disappeared. Rain is wanted, the country being nearly as dry as in midsummer; up the Ottawa freight boats can scarcely carry half their usual freight; should winter set in before the small rivers, creeks, and swamps are filled, we may look for a very disastrous season for the lumbermen. A few weeks of open, warm weather, with considerable rain, will be of immense benefit to every part of Lower Canada.

PRODUCE.—Our produce market has been tolerably active, fair sales of flour for export and local consumption at about last week's rates; several shipments have been made to England, arrivals recently have not been heavy so that our market is by no means overstocked ; the prices remain much the same as last week. Wheat is unchanged, 20,000 bush. Chicago No. 2 sold on the spot at $1.14 and 10,000 do. to arrive at $1.11. U. C. spring remains at $1.19 to $1.20. The coarse grains are very scarce and high, and likely to continue so. Peas are worth about $1 per 66 lbs. Oats as high as 50c. per 32 lbs. has been paid for lots to supply our local millers, Lower Canada oats are exceedingly light, and in many parts of the country the farmers have preferred feeding them down to the horses in the straw in preference to threshing them. Barley here, as in Toronto, is exceedingly high and quotations are nominal. In Beauharnois county, the farmers have been paid as high as 84c. per minot, the Americans being in the market. The quality generally is good, the color being white but the weight is deficient. Some information respecting our Montreal retail markets may not be without interest to your readers. We possess six city markets under the control of our corporation and subject to very severe restrictions, as a large proportion of our city revenue is derived from them. We have consequently no private butcher shops nor green groceries, though most of our general grocers sells vegetables, pork, hams, &c., to their customers, but by a strange anomaly are prohibited from selling fresh meat and fish. This is often the cause of great inconvenience to the citizens and I think might easily be remedied by the corporation granting licences outside of the market.

PROVISIONS.—The supplies of Lower Canada cattle have been rather less than usual, especially hogs, which generally have been light. The farmers are bringing forward all their horned cattle fearful of the supply of fodder running short; consequently meat of all descriptions, excepting pork, is cheap, but the quality is inferior, such as your butchers would scarcely like to offer; the price of beef ranges from $5.50 to $8, according to quality, the fattest bringing as high a $9. The bulk of our supply for retail uses from Western Canada so far, very few of our Canadian farmers have turned their attention to grazing, which in many districts would prove most profitable. Writing on agricultural matters my attention was attracted by an article in your paper of the 15th, intitled "Peat vs. Fuel," in which the value of peat has been prominently brought forward. The writer has omitted to recognize its great value for agricultural purposes. Mr. A. Young, a distinguished English agriculturalist, in his "Farmer's Tour through England," published in the year 1812, states that the value of peat ashes is hardly known in the farming districts. Ten bushels applied to one acre bearing clover will fully double the crop, and the same result may be expected on all hay lands. On the Bellevue farm, situated on the Ottawa river, they have been used instead of soot, &c., to turnip fields with the most successful results and peat dust is most valuable for protecting onions from their enemies and for eradicati thistles.

GROCERIES.—The market has been compa tively active during the week, dried fruits, es cially Valentia raisins, having sold freely b on the spot and to arrive. Teas have been qu but there have been considerable transaction sugars. There are only three large auction s advertized, viz.: Rimmer, Gunn & Co., A. quhart & Co., and T. & F. Ross & Co., (a Que firm having a branch here); several Western buy are in town and more are expected by to-mgl train, but the general impression is that very li business will be done, your large grocers have h direct importers to so large an extent that i not worth their while to attend our sales. matter is often discussed in Montreal as to advisability of auction sales, except for di cargoes. It is true they enable individual m chants to move off considerable quantities of go but on the other hand it is agreed that it dam not only the private sales of the merchants, interferes most seriously with the business large and useful class of the mercantile commun viz., the jobbers. Small country buyers attend our large sales can buy small lots of g at prices fully equal, if not in many cases less the jobber, both buying in the same market under similar advantages. In New York, Bos Liverpool, and all other large commercial ci the lots put up at auction are such that only l men or jobbers enter the market, and there is established a distinctive *wholesale* and *whole retail price*. The question is this, has Ca advanced sufficiently for such a distinction? is an open one and much debated in our com cial circles. I give no positive opinion eithe way or another but leave it to your readers.

Toronto Market.

Trade in the various departments has been quiet this week, but considering the stage o season a good deal is being done.

HARDWARE.—The fall stocks are now m to hand, and the assortment, as a whole is though some lines of heavy goods are runnin owing to a pretty active demand. We reduc quotations of a number of articles.

GRAIN.—Wheat receipts by cars, 41,358 b and 36,984 bush. last week. The marke Spring is dull, with a downward tendency closed at a decline of 1 to 2 cents on last v prices. Sales include 5,700 bush. at $112 and a number of car loads at $1.11 to $1.12. is some demand for midge proof wheat ; 2 bush. sold at $1.14½ f.o.b., and several c $1.14. For the better qualities of Fall, the fair demand, and Choice sells at $1.30 to About twenty car loads in all sold at these tions, and several cars inferior at $1.20 to $ there is no demand except for the best. *Ba* Receipts by cars for the week 24,750 bush 38,000 bush. for the previous week. The receipts have been light amounting only to 10,000 to 12,000 bushels. The shipmen water to the 26th were 634,000 bushs., of $81,675 bushs. were shipped last week ; o quantity 6,789 bushs. went to Erie ; 8,000 to Toledo, and the balance to Oswego. The in store here is about 150,000 bush., an decreased about 50,000 bush. within ten The market opened at $1.40 to $1.43, advar $1.44, and closed unsettled at $1.35 to Sales during the week were two cars at three cars at $1.44 ; 2,500 bush. at $1.40 bush. at $1.42 ; one car at $1.38, and one $1.35. *Peas*—Receipts by cars for the week bush. ; stock about 35,000 bush. ; there is ited demand at 90c. to 91c., holders askin No sales reported. *Oats.*—Receipts by cars bush. ; there is a moderate demand, a market is quiet at 51c. to 52c., with sales cars at quotations. *Rye.*—The distiller paying 90c. per 60 lbs. *Seeds.*—There i demand for timothy at $2.25 to $2.75 i

er has been recently imported to a eonsider- extent from Chieago and other American kets, and sells here at $6.00 to $6.50. The n gold has, however, stopped that movement.

OUR.—Receipt by ears 1,090 brls., and 2,150 last week. There is a steady demand for fine for shipment to the Lower Provinees, sales of about 1,700 blrs., in all were reported .00 to $5.10; the latter is now an outside e. A broken lot of fancy sold at $5.35. ing doing in other grades.

OVISIONS.—*Butter.*—Some lots of good store ed are offering up the Grand Trunk at 20e. to ; no sales; there is no shipping demand at ers' figures. Small lots are being sold for consumption at full priees. *Dressed Hogs*— nited number are arriving and sell at $6.00 .50 aecording to weight and quality. There o mess hogs offering, but high prices would be *Bacon.*—There is a more active demand, prices are not established. *Mess Pork.*—There uyers of lots at $24, but holders ask $24.75 5. *Lard* is firm and in good demand at 15c. *Eg*.—Selling in small quantities at 17c. to 18c. *Rise*—Nominal as quoted.

VE STOCK.—*Cattle.*—There is a great abund- of second class eattle, and for some lots d during the week, buyers eould not be found gures thought reasonable by owners. All the lass offering is readily taken at $6 to $6.50; quotations range down to $4. *Sheep*—Arc od supply, and sell at $2 to $3 each. *Hogs.* e firm has bought since the commeneement e season about 3,000 hogs, of which about were taken during the past week at 5¼ to 5½c. pound, live weight.

EIGHTS.—Rates by vessels remained un- ged. Barley to Oswego pays 3½c., to Erie to Toledo 5c., American currency. Flour to treal, by steamer, pays 25e., and grain 8e.; to Halifax, 95c.; to St. John, 85c.; to Boston, . W. R., 80e. Lumber to Oswego, $1.50 .75 per thonsand feet.

St. John Market.

READSTUFFS.—Oct. 21.—Reeeipts; from U. s, per steamers and sailing vessels, 1,006 bbls. 500 bbls. of which are for Frederickton; bbls. and 200 bags eornmeal. From Ontario, Grand Trunk Railway, steamers and sailing els, 12,160 bbls flour. Our flour market con- s very dull. We have had large reeeipts g the week; there has been no improvement e demand, and in consequence prices have re- d from our last week's quotations. Good rs. are freely offered at $6.50, and we hear of sales from vessels under that rate. Priees, ever, are for the most part nominal, buyers g unwilling to enter into large transactions e the market in the Upper Provinces remains h an unsettled condition. The demand this n will be lighter than for the two or three ious years, owing to the excellent crops of er grains which our farmers have secured. hear of but few enquiries for cornmeal, sales hich are low at $4.50.

Halifax Market.

READSTUFFS.—Oct. 20.—Flour still continues and holders have had to submit to lower s this week. Montreal brands of No. 1 have sold at Auction and private sales at $6.50 3 ths. Toronto and Western Canada $6.65 to 65. Extra Canada $7.50 to $8. Extra State ittle demand at $6 to $6.75, accordiug to nity. Cornmeal dull and without change at 0 to $4.60 for kiln dried; $4.40 to $4.50 for ground. Oatmeal $7.70 to $7.80. Imports January 1st to October 20th. 1867 and 1868:

	Bbls. Flour.	Bbls. Cornmeal.
1868.	143,297	41,945
1867.	156,466	30,566

EST INDIA PRODUCE.—Although there has an advance in the United States and Cana- markets, we have no change to note in prices Most of our sugars are being shipped for treal. We quote: Porto Rico, 6¼ to 6⅝c.; Barbadoes, 5¾ to 5¾c.; Cuba, 5½ to 5¾c.; Centrifugal Cuba, 6c., in bond.

FINANCIAL.—Bank drawing rate on London 60 day sight bills 13 per cent. prem.; private 12 to 12½ per cent. prem. New York gold drafts at sight, 3¾ per cent. prem. Curreney drafts 23½ per eent. discount. Montreal sight drafts 3¾ per cent. prem. Newfoundland sight drafts 5 per cent. premium.

St. Clair Flats Canal.

The improvement of the St. Clair Flats, whieh is now being made, after the plans and under the direction of General T. J. Cram, of the United States Corps of Engineers, cannot but be of interest not only to commercial men, but eitizens of the Western States; for the deepening of the ehannel will facilitate to a great extent the shipment of the produce from the lakes so as to enhance the value of all careals. The eanal will be one and a half miles ia length by 300 feet in width and will be dredged so as to allow vessels drawing thirteen feet to pass through at the lowest stage. It is to be so construeted that it can be deepened to admit vessels drawing eighteen feet whenever the demands of commerce shall render it necessary. It is being furnished with timber dykes, one ou each side, running the entire length, which will be filled from the channel. The banks, besides, are being made fifty-eight feet wide and five feet above water.

The Suez Canal.

The completion of the Suez Canal, whieh it is expected will be open for the passage of vessels during the present month, marks an important era in Oriental affairs; in fact, its influence reacts upon commercial matters throughout the world. This wonderful work of engineering skill and patient labor, eosting about $30,000,000, is capable of earrying upon its bosom vessels of the largest class engaged in the European and Indian trade, and will shorten the distance about one half. It is owned by a French Company, and its chief engineer, to whose genius its eonstruction is chiefly due, is M. Ferdinand de Lesseps, a grandson of the Marquis de Lafayette. Thus another link in the great chain of civilization and progress is forged, binding nations with bonds more enduring than steel.

The Tea Trade.

The tea movement in London and Liverpool from the 1st January to the 30th September, is shown by the following figures:

	1867.	1868.
London—	lbs.	lbs.
Foreign imports	79,345,218	92,564,687
Coastwise imports	133,200	239,040
Duty paid deliveries	103,700,053	102,631,951
Exports—coastwise	27,755,636	24,391,018
Exports—foreign	23,141,549	23,261,539
Stock	60,307,495	58,173,060
Liverpool—		
Foreign imports	460,792	600,232
Coastwise imports	2,773,007	1,956,047
Duty paid deliveries	4,209,548	3,487,362
Exports—foreign	451,710	316,989
Exports—coastwise	751,286	564,941
Stock	1,326,184	743,183

The shipments from Hong Kong to Sept. 17th 1868, were 95,000,000 lbs; to Sept. 28th, 1867, 71,000,000 lbs.

Cotton.

A statement showing the stocks of cotton in Liverpool and London, including the supplies of American and Indian produee aseertained to be afloat to those ports, is as follows:—

	1867.	1868.
Stock in Liverpool, bales	737,000	427,100
" London	103,580	82,770
American cotton afloat	14,000	11,000
Indian	323,460	526,920
Total	1,178,040	1,047,790

Of the present stoek of eotton in Liverpool 20¾ per cent. is American against 29 per cent. last year. Of Indian cotton the proportion is 53 per cent. against 46¾ per cent.

Prince Edward Island.

P. E. Island has imported this year—say up to the 20th Sept.—12,188 tons of coal, 21,759 bbls. flour, 6,000 bbls. eornmeal. In the same time it has exported 10,685 bbls. maekerel, the greater portion, however, having been taken in U. S. bottoms, more than 3,000 bbls. of which have been sent through New Brunswiek by rail to the States. The fishermen are availing themselves more than heretofore of the Island as a fishing station; instead of returning with their fares as soon as taken, they ship them homeward from Charlottetown or land them at Shediae.

Newfoundland Fisheries.

The results of eodfishing on the eastern coast of Newfoundland this season are most disastrous. In order that the expenses may be covered, it is neeessary that every vessel employed should take at least 160,000 eod; but this year many have only caught 20,000, 25,000, or 30,000. Accordingly, discouragement is general, and many of the owners of vessels have determined to fish no more. The resolution will deprive of occupation a large number of seamen of France. So says a letter from Freneh St. Peters.

Imports of Wheat.

Imports of Wheat into the United Kingdom during the seven months ending July 31st, 1866, 1867 *and* 1868:

	WHEAT. 1866.	1867.	1868.
Russia.....cwts.	3,988,969	6,464,815	5,371,632
Prussia	2,450,902	4,071,707	2,402,419
Mecklenburg	455,222	552,821	425,566

PORTAGE LAKE AND LAKE SUPERIOR SHIP CANAL COMPANY.—This Company was incorporated by the Leigslature of Michigan as early as 1854. The eanal will be about three miles in length, thirteen feet deep, one hundred feet wide at bottom and top, and will shorten the distance between the two points about two hundred miles of dangerous lake navigation. The Company was originally organized in 1861, with a land grant of 200,000 aeres. After a careful survey, this grant not being deemed sufficient to build the eanal, it was inereased last year to 400,000 acres. This work is now in aetive progress, and is being pushed with such vigor by the Company that this great project will be an accomplished fact in a few short months. Of the marsh exeavation over one-half mile has been completed, which, with a few hundred feet further, eonneeting with a small lake of over a half a mile in length, will leave about three-fourths of a mile of elear sand digging to bring the two great lakes together. The dredges are at work night and day.—*Chicago Jour. of Com.*

PETROLEUM SHIPMENTS.—The *Etowah*, of Liverpool, is now loading with Refined Petroleum, direct for Liverpool, at the doek of Thos. Walton. The cargo will consist of 2000 barrels of oil, manufactured in Cleveland, mostly by the Walton Brothers, and is owned by Messrs. Cunningham, Shaw & Co., of Liverpool. The tunnage will consist of staves and boat oars. This is the third or fourth cargo of oil that has been shipped direet to Liverpool from Cleveland. The previous ventures of this kind have proved profitable, and we have no doubt the present one will result the same way.—*Cleveland Herald, Sept. 29th.*

COMPETING ROUTES.

The Chicago *Tribune* says:—"The elevator at New Orleans is now nearly completed, and will have a storing capacity of 750,000 bushels, which it is proposed to utilize by towing Grain down the Father of Waters in fleets of boats built for the purpose, and thence shipping it in ocean vessels to Europe, or even to the Atlantic cities, which, it is claimed, can be accomplished at a much cheaper rate than, as now, by rail, lake and canal, from the farming districts within a few miles of the Mississippi River. It is well known that past experience in shipping corn round through the Gulf has not been peculiarly profitable, loss by heating having occurrred in almost every instance, the warm humidity of the Gulf streambeing found more detrimental in producing precocious germination than the transit of the equatorial zone outside of that stream. But there are not wanting arguments in favor of the route, or well-posted men who believe that the passage can be made in the winter months without risk. The New Orleans merchants have determined to try it, and are aided by capital from outside, which at least assures a fair trial, which they claim has not yet been made. Connected with this is the proposition to supply the North-west, and especially Chicago, with many of the products which now come by way of New York. It is stated to be in contemplation to establish a line of vessels to the Isthmus of Panama, by which heavy freight can be brought from California much more cheaply than by the overland route, with the Pacific Railroad in its favor, and it is believed that the opening of that route "across the continent," will so increase the traffic between the Pacific seaboard and the (now called) Western States, as to make such a line an absolute necessity for the transit of the heavier classes of goods which will move in upon us in rapidly increasing abundance—too great for the facilities of the railroad, even though the question of expense did not interfere in favor of the scheme. The same course is proposed with regard to goods from New York and Europe, designed for the trans-Mississippi region.

Canada Life Assurance Company.

CAPITAL AND CASH ASSETS,

OVER $2,000,000.

SUMS ASSURED,

$5,000,000.

A COMPARISON of the rates of this Company with others cannot fail to demonstrate the advantage of the low premiums, which, by the higher returns from its investments, it is enabled to offer.

IF PREFERRED, ASSURERS NEED ONLY

PAY ONE-HALF OF EACH YEAR'S PREMIUM IN CASH,

during the whole term of policies on the 10 payment plan, or for seven years on the whole life plan.

For the unpaid portion of premiums,

"NOTES" ARE NOT REQUIRED BY THIS COMPANY,

so that assurers are not liable to be called upon for payment of these, nor for assessments upon them, as in the case of Mutual Companies.

Every facility and advantage which can be afforded are offered by this Company.

THE PRINCE EDWARD COUNTY
Mutual Fire Insurance Company.

HEAD OFFICE, PICTON, ONTARIO.

President, L. B. STINSON; *Vice-President*, W. A. RICHARDS.
Directors: H. A. McFaul, James Cavan, James Johnson, N. S. DeMill, William Delong. *Treasurer*, David Barker. *Secretary*, John Twiss; *Solicitor*, R. J. Fitzgerald.

THIS Company is established upon strictly Mutual principles, insuring farming and isolated property, (not hazardous,) *Townships only*, and offers great advantages to insurers, at low rates for *five years*, without the expense of a renewal. This Company has existed 12 years, during which period it has adjusted all losses in a satisfactory manner. It is managed with strict economy, and affords an opportunity of insuring with safety and reliance, and very little expense, which accounts for its long standing and the successful business which it has been and is now doing.

Picton, June 15, 1868. 9-1y

UNRIVALLED!

THE BRITISH AMERICAN COMMERCIAL COLLEGE,

Consolidated with the

Bryant, Stratton and Odell Business College
AND TELEGRAPHIC INSTITUTE,

STANDS Pre-eminent and Unrivalled. It is the LARGEST and MOST EFFICIENT. It employs the largest staff of Teachers, among whom are the two BEST PENMEN OF CANADA.

Montreal House, Montreal, Canada.

TO MONETARY MEN.—Merchants, Insurance Agents, Lawyers, Bankers, Railway and Steamboat Travellers, Mining Agents, Directors and Stockholders of Public Companies, and other persons visiting Montreal for business or pleasure, are here by most respectfully informed that the undersigned proposes to furnish the best hotel accommodation at the most reasonable charges. It is our study to provide every comfort and accommodation to all our guests, especially for gentlemen engaged as above. To those who have been accustomed to patronize other first-class hotels, we only ask a trial; we have the same accommodation and our table is furnished with every delicacy of the season.

H. DUCLOS.

Nov. 22. 1867. 15-1y

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per sent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Extract of Hemlock Bark—Extract of Oak Bark

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from unground *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark*; 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

☞ Any further information may be obtained by addressing

ÆTNA

Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

Mining.

MADOC GOLD DISTRICT.

(From our own Correspondent.)

Belleville, Nov. 2, 1868.

The high hopes respecting the richness of this region in the precious metals, which were so prevalent eighteen months ago, have been slowly giving way before the repeated disappointments which have attended the efforts of Companies and individuals to realize the expectations excited by the undoubted richness of some of the deposits, and the reported value of others. Instead of the general haste to become rich, by monopolizing every lot where gold was said to have been found, the holders of mining property, so called, are for the most part only desirous of finding a chance to *hedge*, or in other words, to get rid of their lands, stock, etc., with the least possible loss; while the question of the day has resolved itself into this, "Does gold exist in Hastings in paying quantities?"

To this momentous query, the reply of the great majority of those who have been stung by the golden *Astræa* would be, if they spoke their real sentiments, a decided "NO!" And yet there is no doubt that gold does exist in appreciable quantities in many of the rocks of the district,—that it is not confined to a few localities, or to any particular stratum, but that it is diffused over a large extent of country, and is to be found in several varieties of rock, of very different chemical composition and mechanical structure. In short, it is at once enticingly common, and provokingly scarce. Upon the right solution of this question, however, depends the future prosperity of the district, and the wellbeing of a large number of its population; and it is therefore worthy of serious consideration and demands a close examination to discover, if possible, the real causes of the general want of success which has thrown such a gloom over our mining prospects.

The first appears to be the rash confidence with which men, totally ignorant of the requisites for success in mining operations, invested their means in the purchase of land and the construction of machinery, on the mere report of interested parties and of *soi disant* assayers, who were either ignorant of the business, or so dishonest as to give false certificates for the purpose of attracting customers and increasing their receipts. Next, the utter inadequacy of the machinery employed to deal with the peculiar conditions under which the gold of these formations is associated with other metals and minerals. Third, the difficulty of obtaining persons qualified to work such machinery as was in use to the best advantage. Fourth, the want of that determined energy which perseveres to the end, and submits to no discouragement so long as a chance of success remains, but when one method fails, sets about to try another. Lastly, in many instances, the want of sufficient capital to carry out the expensive alterations which would be necessary to pursue their object to a satisfactory conclusion.

Having thus presented the dark side of the picture, let us inquire what inducements there are to persevere in the attempt to realize the advantages promised by the presence of the precious metals. First, only one method of reduction has been tried, namely, mercurial amalgamation, which, as is well known, can only be successfully applied to ores in which the metal exists, not only in a free or native, but also in a clean state. Now, most of the gold of this region is found in combination with other matters which impede, and in some cases totally prevent the action of the quicksilver. In many cases which have come under my own observation, particles of gold, distinctly visible to the naked eye, some of them over a grain, or even several grains in weight, have been submitted to the action of mercury for an hour or more, without any amalgamation being effected, even after being boiled with salt, soda, etc., though after being submitted to the roasting action of the blow-pipe, the mercury seized upon the same particles with avidity. I have also frequently observed several particles of gold in the tailings of an amalgamation assay, partially coated with quicksilver; from which it appears that the action of mercury is at best only partial and uncertain, and that we must expect considerable loss from its employment as the agent for the collection of gold.

Second, no attempt has yet been made to get rid of any part of the dead matter, (lime, magnesia, silex, alumina, and other comparatively worthless minerals), previous to submitting the ore to the action of the mercury; yet the metallurgists of Europe have found that the net returns of their mines have been largely increased by well managed concentration with improved apparatus, and that by this means they have been enabled to reduce profitably many ores which were formerly considered too poor to pay working expenses, and even to work over again the refuse of former operations. There is, however, an objection to these modes of concentration, viz., that they operate through the medium of water, which causes a loss of a certain portion of the valuable matter of the ore, varying according to the friability and gravity of the substance; though, in the case of gold, I believe the loss to be over stated. This difficulty seems likely to be overcome, as I read lately an account of a machine exhibited in Montreal, which separates the various substances contained in an ore by the application of centrifugal force, and the resistance of the atmosphere, according to their several specific gravities. After their separation, the valuable portions can either be melted with proper fluxes, or roasted and submitted to the action of mercury or chlorine.

The last mentioned agent has not been hitherto introduced in this district, though it is being used with great success in the Pacific States for the reduction of gold-bearing sulphurets, and I am strongly of opinion that it may be profitably employed in the treatment of the similar substances which abound in the Hastings mines, and which has so far proved the chief difficulty in our reduction works.

Two other processes are about to be tried here. One is the Stevens flux, in which very few of our mining men appear to have any confidence. The works of Messrs. Jones & Robbins, in Hungerford township, have been ready for two weeks past, and their operations have only been delayed by the absence of the flux, which was shipped from Boston on the 16th ult, but has been unaccountably delayed in its transit.

The other is the thermo-electric process of Dr. Rae, of Syracuse, the apparatus for which he is

now engaged in fitting up in the mill of the Merchants' Union Company, in the village of Madoc, and which will shortly be in operation.

A telegram to the *Intelligencer*, of Friday last, announced the cleaning up of a crushing of 70 tons of rock from the Feigel mine, township of Marmora, the result of which is stated to be $1,330 in gold, or at the rate of $19 per ton.

NOVA SCOTIA GOLD MINING REVIEW.

The continued wetness of the season has seriously affected both surface and underground operations. Work has wholly ceased on several shafts until machinery can be procured for draining them, and there has been a consequent falling off in the produce of some of the best mines.

The following quantities of bar gold have been reported in Halifax between the 10th and 22nd October:

Co.	District.	Oz.	Dwt.	grs.
Shaffer	Oldham	74	17	0
Queen	Uniacke	58	0	0
North St. Lawrence	"	28	0	0
Wellington	Sherbrooke	83	15	0
Palmerston	"	115	1	13
Hayden & Derby	"	25	11	1
El Dorado	Wine Harbor	23	3	6
Ophir	Renfrew	163	2	0
Uniacke	Uniacke	96	12	11
Waverley	Waverley	16	3	13
Boston & Nova Scotia.	"	17	6	12
Not stated		3	12	9
		11	6	10
		716	11	3

The Mines Department Returns for the last quarter of 1867 and the first six months of 1868 have just been issued. The yield for 1867 shows an increase of 2090 oz. 5 dwts. 20 grs. over that of 1866; and the yield for the first quarter of 1868 is 67 oz. 5 dwts. 4 grs. in excess of the same period in 1867; but the same quarter, from the causes above referred to, shows a falling off, compared with that of the previous year, of 2548 oz. 18 dwts. 7 grs. It is gratifying to see Lawrencetown again resume the rank of a producing district, although at present it is but in a small way, the returns for the half-year being only 192 oz. 13 dwts. 17 grs.

SHERBROOKE.—Mr. Carnie, of Boston, has started the works of the Stanley Co. A rich boulder of great width has been found on the property of the New York & Sherbrooke Co., and they are now searching for the lode, which the depth of soil and extremely wet weather render a somewhat arduous task. The Palmerston, Wellington, and Hayden and Derby Companies have sent up substantial results, described in the bullion report; and the Canadian Companies are making good and hopeful progress

WINE HARBOR.—Under date the 8th inst., "A Miner" writes:—"Times are first-rate here at present, any amount of men of all sizes, grades, and professions to work, the picture of content stamped upon every lineament of their features; quite the contrary to what it has been here for the last two or three autumns, when every person appeared to be anxious to know which pit was likely to work longest, or all winter, so that they could secure a winter's job. This autumn, however, there are no doubts or uncertainties. The Orient Co are pushing on their work with a strong battalion, fully armed and equipped with all the necessities for a long winter's campaign. The manager has just let a contract to David Murray & Co,, which, when completed, will come to nearly four thousand dollars. It is calculated said contract will turn out 400 tons of quartz or thereabouts. There are also two other contracts going on on two other leads. The Eureka Co. have let a contract which, when completed, will, it is calculated, turn out 240 tons or thereabouts. The Provincial Co. are pressing forward towards the prize which even former unbelievers now allow they will yet receive. The El Dorado Co. is all right. They have just cleared up 38 tons, which they had crushed at the Victoria mill (out of the new lode they have been sinking on, which is fourteen feet wide,) and which yielded 21 oz. retorted gold. When it is taken into consideration that where they are sinking is on their extreme western line, and that said belt runs through the whole breadth of their property, I think every one else might come to the decided conclusion that they are all right. The McIntosh Co. are to work on the same belt, about 400 feet to the westward of the El Dorado shaft, taking out quartz at almost a tremendous rate, and showing some beautiful specimens of gold. They have just commenced to crush out of said lode, and the manager purposes to run two batteries on it for the remainder of this month, after which it will speak for itself. The Stadacona Co. are, to use a common expression, 'going in big licks,' and turning out a great pile of crushing material. They have not cleaned up any yet, consequently I cannot give a correct or decided account of what has been taken out, or the yield thereof. It will, however, speak for itself shortly."

The Provincial Co. have had a portable stamp mill of one battery, for prospecting purposes, built by Messrs. Symonds & Co., of this city. It is a most complete arrangement, and attracted much notice at the late Exhibition.

UNIACKE.—The Queen Co., besides taking a prize at the Exhibition, have sent up nearly 60 ounces within the fortnight, and are now passing through their mill ore of very excellent quality. The North St. Lawrence Co. have contributed a small bar, and the Uniacke Co. have remitted 96 oz. 12 dwts. 11 grs.

OLDHAM.—Messrs Cook & Belding are working with good prospects; and Mr. Shaffer has worked with good results, 74 oz. 17 dwts. being his modicum for the past fortnight.

RENFREW.—The Ophir tells its progress by a brick of 163 oz. 2 dwts.; the Andrews shaft continues to give satisfaction; the Colonial Co. report some promising lodes; the Carnarvon Co., when not impeded by weather, have made good headway in prospecting; and Messrs. Thomas and Macdonald are working a lode that shows both coarse and fine gold.

ECUM SECUM.—The machinery for the mill of the Atlantic Co. has all arrived, and Mr. Andrews continues to report favorably.—*Halifax Mining Gazette.*

THE SALT WELLS OF GODERICH.

The discovery of Salt was quite unlooked for, the result following the search for oil. A well having been sunk there with the expectation of getting petroleum, turned out a blank. It was then suggested that, by going deeper, salt might possibly be reached, especially as the water obtained at a depth of 500 feet was rather salty in flavour. The drilling was resumed, and at the depth of between one thousand and eleven hundred feet heavy brine was reached, which it was thought would yield salt in paying quantities. Before going further a chemical analysis of the brine was obtained, to discover if the properties contained would render the salt valuable for pickling purposes, and also to see if a sufficient per centage of solid salt could be obtained from a given quantity of brine to render the industry profitable. The samples were referred to competent chemists, and their reports being highly satisfactory, it was determined by the Goderich Salt and Petroleum Company—the enterprising pioneers of the salt interest—to erect the necessary works for the manufacture of salt. These work have for about a year been in active operation, and so far have proved a financial success, and notwithstanding the competition offered by the Americans, who seek to swamp the infant enterprise, the works are run to a profit. Other companies, following the example of this company, have gone to work and sunk wells, and there is no question that Goderich is now in a position to supply all the salt required by Ontario. The wells finished and partly in operation numb eight, as follows:—

	Capit
Goderich Salt and Petroleum Co.	$15,0
Tecumseh	5,0
Dominion	20,
Huron (in operation)	10,0
Victoria (do)	10,0
Maitland	10,0
Prince Well (now boring)	10,0
Ontario	15,0

Of the above, the first named is the large operating with 104 kettles; the Tecumseh is w ing till spring; the Ontario commenced in Ju making 60 kettels; Dominion 60 kettles, a Huron 120 kettles, in full operation; Victori kettles; Maitland, drilled to salt, operations the present suspended, with a view to experim on some cheaper method of evaporation; Pri well down 600 or 700 feet. We will now atte to describe the process of salt making. The pu ing machinery is precisely the same as that u by oil wells. The "well" is a round hole of fi four to five inches in diameter, drilled perfe straight down over a thousand feet into mot earth, and lined or cased with iron casing to vent the surrounding earth from "caving in" filling it up. Down this well is fixed the pu tubing, about three inches in diameter, wh descends to about 600 feet. At the end or bot of the tubing is fixed the pump, and inside pump tubing are wooden rods connected by couplings, which work the pump valves and f the brine up the tubing to the surface. In "Goderich Company" they use a 20 horse st engine, which, by the aid of connecting machin works the pump. The brine, which is pumpe at the rate of 500 barrels in 24 hours, flows large vat, where it is held till wanted, and nected with the vat are pipes leading to the kettles. In the "Goderich Company's" w there are four rows of these kettles, to the nu of 104, each holding 140 gallons of brine. occupy a space of 120 feet long and 64 wide, are, of course, built in brick-work, and u neath are the furnaces to heat the brine and off the vapour. One long furnace runs u each row of kettles, so that four furnaces ar ployed, each using about four cords of woo day. When the furnaces are in full blast kettles are "drawn" or emptied every four h and then the yield is generally a bushel half of salt to each charge. The kettles re cleaning once a day, the process being the ping off the calcined salt which adheres t sides, and is only valuable for manure, and s to the farmers at $2 a ton. The quality salt depends much upon the cooking of the as the faster it boils the finer becomes the Another plan of absorbing the water is by e ation by solar heat; but this process requir tensive works, produces a coarse salt, and h yet been introduced into Canada. The c cordwood at the wells is about $2 to $2.5 some of the works are about to try coal as economical fuel, as it can be be laid down a erich for $4.50 per ton. The number of m ployed at the "Goderich Company's" work prise fourteen, including engineer and p The workmen state that the action of t has a singular effect upon their clothes, rotting all cotton garments, rendering it ne for them to wear woollen clothes, which affected by the brine.

Taking the experience of the "Goderich pany," the manufacture of salt costs about barrel, including the package, which is m about 30c. at the factory. The cartage station or wharf is 4½c. per barrel, and the to Toronto $24 per car load, and to Lond The amount turned out by the company n about from 90 to 100 barrels per day, 280 salt comprising a barrel. For purity and

n foreign substances, the Goderich salt is unilled; for dairy and pork packing it is pronced to be all that is needed, its preserving perties ranking high in the estimation of those have used it. As an illustration of this fact, ay be stated that a shipment of from 400 to barrels has already been made to Chicago, ough a duty of 70c. in gold per barrel is d upon its importation to the United States. he Goderich salt makers argue that, as the rnment has placed a duty of 6 cents per gallon the importation of American crude oil, and ents per gallon against American refined oil—conceding the theory of protection—it is but that the growing salt interests should also ve a helping hand. Nor could objection be n by the Provinces of Quebec, New Brunsor Nova Scotia to such a course, for American does not reach those places, the cheap rate at lh Liverpool salt is offered excluding the rican article. No Goderich salt, could, with rt, be sent farther east than Kingston.

he brine from which the salt is made is of a high gravity, averaging from 90° to 100° in gth, as tested by the salometer. It is free gypsum and any bitter flavor, and possesses strong degree the peculiar properties which rve meat from decay. Some salts, it may e generally known, are destitute of this, and ot be used in the dairy or for pork packing. n the brine reaches the density of 100°, by lometer, (the fluid being heated to 60° Fah. ake a fair test) the water can absorb no more the highest standard of absorption having reached; if more salt is added to brine which sses the strength of 100° it will not be taken nt falls to the bottom of the vessel. With explanation the reader can readily understand ich in salt the Goderich brine is. We have ed a sample from the "Dominion Salt ks," which is remarkable for its snowy purity, excellence of flavor; indeed, all the Goderich possess the same qualifications. In order to this new enterprise the public can do much; elf-interest of dealers still prompts them to rt American Oswego salt because a few cents rrel additional profit is to be made on its sale. e public wish to help the salt works of Onlet every one who is a consumer ASK FOR RICH SALT, and accept no other. Directly lthy and and persistent demand springs up e product, storekeepers will provide themwith it, and the American article, imported annual cost of $130,000, will be excluded, he money annually paid out for its purchase be spent at home, and give employment to nds of willing workers. We hope that the tic citizens of Ontario will sustain "home factures," without which we should be a poor uable country indeed!—*Free Press*.

LD BAR FROM THE SIERRA NEVADA.—We editorial *Enterprise*) were yesterday shown a gold from the mine of the Sierra Nevada Company. The bar contained $2,118 47 in gold, and $101 65 in silver—total, $2,221 12. It is the product of 280 tons of ore, worked by the process common in California for gold quartz—that is, no amalgamating pans are used. The lot of 280 tons was run through the batteries in seven days, being at the rate of 40 tons per day. The whole cost of working does not exceed $2 per ton, whereas the yield per ton is nearly $8, leaving a clear profit of $240 per day for the mill.

EXTENSIVE MINING.—The Report of the Yellow Jacket Company of Nevada, shows that their total receipts for the fiscal year ending June 30, including a balance of $116,087 on hand at the commencement, were $1,240,585. Three assessments were collected during the year, amounting to $390,000. The amount of bullion produced was $676,861 from 24,719 tons of ore, showing an average yield of 19 50. The disbursements for the year amounted to $1,191,336, leaving a balance to the credit of the Company over all liabilities of $49,249. Only one dividend of $90,000 was disbursed. The amount expended for labor at the mine was $294,833, and for reduction of ore $517,643, of which $254,228 was paid to outside mills. The liabilities of the Company were stated at $86,823, and the assets at $116,071, showing, as already remarked, a surplus of 49,249. Included in the assets are $104,724 cash in the Bank of California.

Railway News.

GREAT WESTERN RAILWAY.

The Directors report that the receipts on capital account during the half-year amounted to £321 4s. 2d., and the total receipts to the 31st July, 1868, to £5,260,529 4s. 9d. The aggregate expenditure to the same date amounted to £5,282,594 3s. 10d., leaving a balance to the debit of capital account of £121,764 19s. 1d. The outlay on capital account during the half-year has been 20,788 11s. 11d. This expenditure includes a proportion of the cost of rebuilding in stone the bridge over twenty-mile creek at Jordan: sundry additions to stations; cost of raising the level of track at Prairie Siding, (a station between Chatham and Baptiste creek), as a protection against floods; payment on account of building a new warehouse at Detroit for the better concentration of the freight business; proportion of the cost of rebuilding in brickwork the passenger station at Paris, originally of wood, cost of five new locomotive engines; and ten new composite cars for the accommodation of emigrant traffic and mixed trains on the branch lines. The receipts and expenditure on revenue account were as follows:—

Gross receipts		£256,649
Working expenses, including renewals		208,462
		£148,187
From which there has to be deducted—		
Interest on bonds, loan, &c.	£52,270	
Loss on conversion of American funds	54,749	
Loss on working Erie & Niagara rai way	529	
Do. Galt and Guelph railway	476	
Detroit fire claims, final charge	4,110	
Amount set aside for renewal of ferry steamers	2,000	
		114,134
Net profit on half-year's operations		34,054
Add surplus from last half-year		2,725
Available for Dividend		36,776

From this amount the Directors recommend a dividend at the rate of two per cent. per annum, free of income tax, which will absorb £35,649 11s. 6d., and leave a surplus of £1,129 5s. to be carried to the credit of next half-year. The renewal fund for the ferry steamers now amounts with interest to £7,125. The loss on conversion of American funds for the half-year amounts to £54,748 12s. 5d., as compared with £52,820 10s. for the corresponding half-year of 1867. The average rate of conversions made during the half-year was 139¾, the average price of gold for the same period having been 140½. The unconverted American funds in hand at 31st July, 1868, amounted to $153,146,24. The following table exhibits the receipts and expenses for six corresponding half-years:—

RECEIPTS.

Half-year ending	Passengers, mails, and sundries.	Freight and live stock.	Rents.	Total.
	£	£	£	£
July, 1863	111,671	180,772	625	293,067
July, 1864	125,282	119,081	577	314,940
July, 1865	139,821	144,028	716	284,565
July, 1866	172,731	165,577	854	343,162
July, 1867	165,367	199,221	1,116	365,704
July, 1868	155,082	200,619	943	356,649

EXPENSES.

	Including renewals.	Per cent. of gross receipts.
	£	
July, 1863	174,262	59·44
July, 1864	171,452	58·44
July, 1865	158,804	55·81
July, 1866	175,747	51·21
July, 1867	182,768	49·93
July, 1868	208,462	58·45

The total traffic receipts show a decrease of £3,887 2s. 6d. as compared with the corresponding period of 1867.

This decrease arises as follows:—

Decrease in local passenger traffic		£3,785
" foreign ditto		5,297
" local freight traffic		7,424
" mails and sundries		3,798
		£20,214
Increase in foreign freight traffic	£8,822	
" emigrant ditto	2,566	
		11,327
Total decrease		£8,887

The decrease in the receipts is owing to the diminished rates adopted by the parallel routes for through passengers and freight, and to the total interruption of the traffic on three separate occasions during several days, by snow storms and floods, over our own and connecting lines, at the commencement of the half-year. The low rates and fares which competition has forced upon the Company for through traffic have had a material effect upon the per centage of working expenses; this, including, renewals, has amounted to 58.45 per cent. as compared with 49·98 for the corresponding half-year. If the tariff of through rates and fares in force at the corresponding period had been maintained during the past half-year the receipts for this traffic would have been augmented by upwards of $100,000, without incurring any increase in the working expenses. The increase in the amount of working expenses is £25,593 4s 9d compared with the corresponding period. This increase has been a matter of serious concern to the Directors, and has engaged the attention of a deputation of the Board which visited Canada during the summer upon the business of the Company. It is chiefly attributed to the extraordinary severity of last winter, and the damage to the rolling-stock and roadway by the intense frost, which exceeded all previous experience. The reports of the engineer and the mechanical superintendant hereto annexed, refer to this expenditure, and also to the increased cost of fuel. The General Manager also specially reports, that making proper allowance for diminished earnings, increased mileage, and extra cost involved by the causes above referred to, he has reason to believe that the ordinary working expenses of the half-year would not have exceeded those of the corresponding period. It will be seen in the Mechanical Superintendent's report that two new and powerful freight locomotives have, during the half-year, been constructed at the cost of revenue and set to work, to replace the same number of an inferior class of passenger engines, and that satisfactory progress has been made in the renewal of others of the same secondary description, by the substitution of new

ones of a greatly improved construction ; and the Board have every reason to be satisfied with the general efficient condition of the plant and rolling-stock. Future prospects from the improved condition of the Dominion are encouraging, and from the recent abundant harvest an increased traffic for the current half-year may reasonably be looked for. It is satisfactory to learn from later advices, that the increased rates the deputation advocated when in Canada, have to some extent been carried into effect. The gross earnings of the Detroit and Milwaukee railroad for the half year ending June 30th, 1868, were £153,204 14s. 5d., and the working expenses, including taxes and insurance, amounted to £98,150 2s., leaving a net revenue of £55,054 12s. 5d. It is satisfactory to be able to state that in consequence of arrangements made by the deputation of the Board to relieve the finances of the Detroit and Milwaukee Company if its increasing prosperity does not meet with any unforseen reverses, there is every reason to expect the Company will be able. at an early period, to commence liquidating the claims for interest so long overdue to this Company. Mr. Thomas C. Street, M.P., having resigned his seat at the Canadian Board, the Honorable John Carling, M.P., has been nominated to fill up the vacancy.

Signed on behalf of the Board of Directors,
THOMAS DAKIN, President.

London, October 5, 1868.

The following is the New Board of Directors :—President, Alderman Dakin, London ; Thomas Faulconer, London ; John Fildes, M. P., Manchester ; Francis Head, London ; Alex. Hoyes, Southampton ; Charles Hunt, London, Canada ; Donald MacInnes, Hamilton, Canada ; Hon. Wm. McMaster, Senator, Toronto, Canada ; Paul Margetson, George Smith, London ; Hon. John Carling, M.P., London, Canada.

BUFFALO AND LAKE HURON RAILWAY.

The report of the Directors states that it would be seen from the Grand Trunk report that the gross revenue for the half-year, ending the 30th June last, was £646,797 ; the ordinary working expenses, £426,477 ; the renewals of permanent way, £36,020 ; and the loss by fires, £4,110—leaving a net available balance of £180,190. From this was deducted £31,383 transferred from suspense account, £10,807 for Montreal and Champlain proportion, £18,882 loss on American currency—leaving a balance of £119,118 divisible between the two companies, in the proportion of 84¼ per cent. to the Grand Trunk Company, and 15¾ per cent. to the Buffalo and Lake Huron Company ; thus making the latter Company's share £18,456, and not £22,045 as published in the Grand Trunk report. In partial explanation of this discrepancy the directors referred to their previous report, in which the proprietors would see that the amount due to the Buffalo Company for the half-year ending the 31st of December, 1867, was £18,429, although the Trunk Company only made the amount £12,284. This was done by dealing with the £31,284, then carried to the debit of suspense account. The amount really due for the half-year ending December, 1867, was £18,429, and for June, 1868, £18,456, making £36,885. The Grand Trunk Company make the figures at £34,329. Of this amount the Directors of the Buffalo Company regretted that they had not received any portion. On comparing the Trunk revenue with the corresponding period last year it had increased by £37,676, the ordinary working expenses had decreased £3,315, and the sum expended on renewals of permanent way was £18,953, less £6,164 charged to the Sarnia and Toronto fires—£66,108, deducting from the suspense account the £31,383, leaving the actual gain on the previous half-year £34,725. In the Trunk report was the following paragraph :—"Every effort that the directors had made to bring about an amicable settlement of the differences of account with the Buffalo Company had hitherto failed. The Buffalo Board would neither agree upon nor allow an impartial officer of the Board of Trade to settle a deed of arbitration. Recent further negotiations through Messrs. Creak and Ritter had ended in nothing, as while the President of the Company signed a memorandum of settlement of all matters, as Mr. Creak suggested, the representatives of the Buffalo Company had refused to do the same." On this statement the Board would only remark that the chairman did certainly refuse to sign a document put before him by Mr. Creak, having the signature of Sir E. Watkins, because it was drawn up in a loose and inexact manner, leaving blank spaces for amounts to be afterwards settled, and still proposing to refer most points to arbitration. There was also introduced a fresh claim which until that moment had never been heard of. This also was to go to the arbitrators. To evince, however, the desire for peace, Mr. Heseltine, while refusing to sign Sir E. Watkin's paper, put into Mr. Creak's possession a carefully drawn up memorandum based upon the verbal recommendations of Messrs. Creak and Ritter, which paper left nothing open, no point unsettled, but disposed of all subjects in dispute without arbitration. The directors had heard nothing more of this paper. It stated that Sir E. Watkin had lost no opportunity of impressing upon his shareholders the small value to them of the Buffalo line, urging an alteration of the lease. The Board uniformly replied that they would be surprised, indeed, if the line did pay, seeing the manner in which the traffic was conducted. Loud complaints were made all along the line of the want of accommodation. The directors were ready, however, as soon as the Grand Trunk Company would fairly carry out the present agreement, and pay, or make arrangements for paying, the balance due to this company, to discuss terms for an alteration in the lease. They did not intend, however, to be coerced into any fresh agreement by Sir E. Watkin withholding the balance due. Although prepared to discuss terms for an alteration of the lease, the Board would prefer to entertain the question of cancelling it entirely. The directors had no hesitation in saying the value of the property was worth all and more than the Grand Trunk Company had given for it, and if the line were in other hands, and the power over its contributories of local traffic and "through" United States traffic were cut off from the Grand Trunk system, their loss would be much more than this company's present share of joint revenue. In conclusion, the directors regretted their inability to make any payment to the bondholders. The Board hoped that before long they might have to deal with some other gentleman rather than Sir E. Watkin in the settlement of these disputes.

ORANGEVILLE TRAMWAY CO.—The Orangeville *Sun* says the Tramway Directors have decided to leave their claims against the Corporation of Orangeville in abeyance and unite in an effort to secure the early construction of the Toronto, Grey and Bruce Railway. If the latter road is built to Orangeville within two years, the tramway claims will be altogether abandoned ; the shareholders receiving a bond of indemnity for their paid-up stock. The agreement will be submitted for ratification to a special meeting of the tramway shareholders to be held on Thursday next. There is no doubt but the agreement will be ratified, and the only obstacle to the Orangeville grant of $15,000 to the Toronto, Grey and Bruce Railway thereby removed.

It is announced that the Government of Ontario has appointed Hon. George W. Allan to be a trustee of the subsidies voted by the municipalities in aid of the Toronto and Nipissing Railway, and that A. W. Lauder, Esq., M.P.P. for South Grey, has been appointed trustee of the subsidies voted in aid of the Toronto Grey and Bruce Railway.

NORTHERN RAILWAY.—Traffic Receipt for ending Oct. 24, 1868.

THURSDAY, NOVEMBER 5, 1868.

THE PACIFIC RAILROAD.

The progress already made in the construction of the two lines of Railroad, known as the Union Pacific, and the Central Pacific, and the energy with which the work is being pushed on, justifies the hope that Railway communication between St. Louis and San Francisco will be complete early next spring. The Union Pacific is working from the Eastern side, and runs trains to Point of Rocks eight hundred and thirty miles west of Omaha and two hundred and thirty-four miles from Salt Lake. The Central Pacific has its track laid for three hundred and forty-eight miles east of Sacramento, or within three hundred and three miles of Salt Lake. So that about five hundred miles remain to be constructed before the two lines will connect. The distance between Sacramento and Omaha is one thousand seven hundred and twenty-five miles. The Editor of the American Journal of Mining says, he was at the end of the Central Pacific on the 19th of August, during which day six miles and a half of track were laid along the level valley of the Humboldt. According to a Califonia paper that Company employs about ten thousand workmen and over three thousand teams, and the track is being extended at the rate of two and a quarter miles per day.

THE COLONIAL SOCIETY.

A Society bearing the above name has been formed in London, England, with Viscount Bury as President, and a large number of noblemen and influential gentlemen as Vice-Presidents, Trustees and directors. Its objects are thus summarized:—

"To provide a place of meeting for all gentlemen connected with the Colonies and British India, and others taking an interest in Colonial and Indian affairs; to establish a reading-room and a library, in which recent and authentic intelligence upon Colonial subjects may be constantly available, and a museum for the collection and exhibition of Colonial productions; to facilitate interchange of experiences amongst persons representing all the Dependencies of Great Britain; to afford opportunities for the reading of papers, and for holding discussions upon Colonial subjects generally; and to undertake scientific, literary, and statistical investigations in connection with the British Empire."

It is hardly necessary to enlarge upon the many advantages connected with the existence of a Society of the character alluded to. Complaint has been made time and again of the gross ignorance prevailing in London respecting Canada, and though we may be able to excuse it, we are none the less hurt that a country so large, so full of resources, so likely to make itself a place among nations, should attract but little serious attention and excite but little interest at the world's great centre. When Canadians visit London they necessarily incur obligations to private friends and acquaintances, which might be avoided to a certain extent if there were some place in the nature of a club, where they could go as a matter of right. Any number of Canadians may be in the great Metropolis without being aware of each other's presence, unless they happen to meet while sauntering on Regent Street, or catch one another stealing a night's amusement at the Alhambra. A "Colonist" is shewn a great deal of kindness by individual Londoners, but a Colonist as a Colonist merely finds it difficult to secure official recognition. Instances are not rare in which Canadians have gone to the United States Minister for favours rather than risk a snubbing at the Colonial Office, or go through the ordeal of question and answer at some of the other Public Departments. Selfishness alone should prompt many of our merchants and professional men to assist in establishing the Colonial Society. Mr. A. R. Roche is Secretary, and such as wish to join should communicate with him at 80 Lombard St., E. C.

THE BANK OF UPPER CANADA.

The meeting of shareholders and creditors held yesterday brings to mind the deeds, good and bad, which the old Bank of Upper Canada bore on its much burdened shoulders, and, as one glances over the balance sheet presented by the Trustees, the inclination is irresistible to compare the present with the past. On the 13th November, 1866, after the suspension of the Bank, the following was the state of affairs:

LIABILITIES.

Circulation	$722,086 09
Due to depositors, &c.	401,190 76
Due to Glyn & Co	299,300 00
Government debt	1,149,430 75
Total	$2,572,007 51

ASSETS.	
Specie and Bank balances	$47,293 85
Mortgages	62,580 85
Real estate	1,673,623 37
Railway stock, debentures	35,282 52
Bills, judgments, &c.	2,225,469 30
Government debentures	17,591 99
Total	$4,061,941 88

The balance to credit of profit and loss was, therefore, $1,489,934.37. The statement laid before the meeting of Wednesday, as of November 1st, 1868, places the present balance at $635,019.72. While the liabilities have been reduced by $765,424.54, the assets has been diminished by $1,620,339.19, showing, thus far, a loss of $854,914.65.

Since 1866 the liabilities have been reduced as follows:

On circulation and deposits	$639,417
Glyn & Co.	126,938
Government debt	16,000
Total	$765,125

On the other hand, the assets have been reduced in this way:

Cash and Bank balances	$32,151
Government Securities	17,592
Bonds and Debentures	22,471
Real Estate	148,673
Bill, Judgments, &c.	1,189,963
	$1,711,130
Mortgages increased	90,790
Total	$1,620,340

Of this sum of $1,620,340, about $650,606 have been written into debts irrecoverable. This would leave assets realized to the extent of $1,069,669 by a reduction in liabilities of $765,425. The difference between these two amounts, or $244,235, represents the net loss on realization. Losses on real estate sold have probably footed up to $180,000. Within the last six months, $50,000 have been lost in the compounding of doubtful debts. The loss on real estate has been very heavy, proving how absurd was the valuation placed upon the lands owned by the bank. In fact, the real estate asset may be taken to represent a value between forty and fifty per cent. below that at which it was handed over to the Trustees.

Owing to the pressure upon our space, we are compelled to leave over till next week an account of the proceedings of the meeting of the shareholders of the Gore Bank, at Hamilton, as well as other interesting matter.

Schooner Berlington.—In the gale of Saturday last, the 30th ult., this vessel, when about four miles off Grimsby, became unmanageable, and sunk in eighty feet of water. Her crew were not off her more than three minutes before she went under. Her cargo consisted of 6000 bushels of white wheat, valued at $8,10. Hull and cargo are both a total loss. She was rated P. 1, and valued at $2,200. The cargo was insured in the Montreal Assurance Company for $8000.

Insurance.

INSURANCE MATTERS IN MONTRAL.

(From a Correspondent.)

Montreal, Nov. 3rd, 1868.

Since my last, two or three incendiary fires have occured. A stable in St. Monique St., was burned, and a most impudent attempt was made to set fire to the premises of Messrs. Evans, Mercer & Co., on Notre Dame St., in broad day light by some scoundrel, who has little fear of fire marshal or corporation rewards before his eyes. Talking of fire marshals that functionary has got into hot water again. This time however he is forced into good company. It appears that the Sheriff by order of the Attorney-General of Quebec, gave him possession of a juryroom in the Court House for the purpose of carrying on his investigations. His Honor Judge Berthelot objected to this proceeding, and ordered the Sheriff to resume the room for its legitimate purposes; instead of doing so, the Sheriff gave his reasons and showed a written authority from Attorney-General Ouimette. His Honor fined the Sheriff £25 for contempt and issued a fresh order for ejection of the parties. The matter stands thus at present, both parties are obstinate and determined to carry their point, so there is no saying how the affair may end. This is one of the first conflicts between local and federal governments, let us hope that the struggle for *State Rights* may not eventuate as in the States a few years ago and lead to a rebellion.

Fire Record.—A barn owned by a man named Maguire, north of Duffin's Creek, was destroyed. No insurance.

Quebec.—There were two unimportant fires here recently; one in a house on the corner of St. Louis and St. Ursule streets, and the other on Nouvelle street. Not much damage was done.

St. John, N. B., Nov. 2.—The residence of Mr. Perkins, Rothsay, was destroyed by fire this morning. Insurance, $5,300.

Nictaux, N. B.—The saw mill, grist mill, and carding machine, owned by Mr. Samuel McKeown, at Nictaux Falls, were totally destroyed by fire. The loss is estimated at $4,000. No insurance.

Some wretches attempted to fire the steam mills of Mr. Merrill, in the south-west part of Burford, county of Brant. Fortunately the attempt was detected in time to frustrate the fiendish purpose. A reward of $100 has been offered for the apprehension and conviction of the parties.

Marine Record.—The Steamer Grecian struck in the Gallop Rapids, River St. Lawrence; she was run into a cove and sunk in fourteen feet of water. Insured for about $32,000. The passengers and freight all saved; her place on the route will be supplied by the "Champion" of the same line. The "Grecian" will be raised, brought to Kingston and placed in dry stock.

The schooner Lady Moulton, of Montreal, downward bound, arrived at Detroit on Saturday in a disabled condition. While sailing into the Detroit river, and just about Hog Island, she was met with by a tow of two vessels bound up, the forward one being the schooner Minnie Slauson, struck her, carrying away her bowsprit, jibboom, and headgear, besides minor damage to her bows. She succeeded in reaching port, and is now repairing. She has a cargo of walnut lumber, from Chatham for Buffalo.

The schooner Frances, Captain William Parker, Master, left St. John, the 19th inst., for Granville, Nova Scotia, where she belonged. The snow was raging when she left, and as she proceeded it increased to be a perfect tempest. The darkness of night came on. She missed the Gut, and went ashore about ten miles above Digby, and soon became a perfect wreck. She had on board goods to a considerable amount, shipped for Bridgetown and other ports, which were considerably injured if not a total loss. Fortunately, all on board the ill-fated vessel reached the shore safely.

A Quebec letter reports the total loss of the schooner Marie Louise, from Quebec, at the mouth of the Miramichi river. She was loaded with flour. The ship Napier is also reported aground near Batiscan. The Deodara and Pawa have arrived.

Port Rowan, Nov. 2.—The schooner Savanah, bound from Chicago to Oswego with 12,000 bushels wheat, went ashore about ten miles above this place, at 4 p.m. on the 30th ult. The vessel sunk in twelve feet of water, and is a total wreck. The crew and the Captain's wife took to the rigging and remained there until 10 o'clock yesterday, when they were rescued in an exhausted condition.

Detroit, Oct. 30.—The propeller "Congress" from Buffalo for Chicago, loaded with railroad iron and salt, was totally destroyed by fire on the 28th inst. near Thunder Bay. Crew saved. She was valued at thirty thousand dollars and insured for twenty thousand dollars.

Port Colborne, Nov. 2.—The captain of the "Grace Whitney" reports passing a small vessel, off Port Burwell, on Saturday morning early. Three men were at the mast-head, but the Whitney could render no assistance, owing to the gale and high sea.

—The schooner *Defiance*, which went ashore on Snake Island reef, has been got off.

The captain of the "Mountaineer" reports passing a large black barque, supposed to be loaded with lumber, water-logged, about forty miles to the west of Long Point. There were four or five men on the quarter-deck. He tried for over two hours to get them off, but could do nothing as the sea was so high. He also saw the sunken vessel, but there was only one man then on her.

The captain of schooner "Light Guard" reports seeing two barges, the "Empire" and the "Scotland," loaded with lumber, water-logged in the middle of the lake. There were no persons on board. It is supposed they were taken off by the tug which had them in tow.

Captains say that on the night of the 29th and 30th Oct. they had the heaviest weather that was experienced.

The brig H. Roney, of Kingston, arrived with the entire board and topsail gone.

The schooner Anoskeag lost her jib.

The "Caroline," of Cobourg, lost her foresail. She saw a large barque run under Long Island with all her canvas gone. Several other vessels which arrived yesterday and to-day were damaged more or less.

The steamer Leeds struck on a rock while running the Chute au Blandeau, in the Ottawa, and sunk in forty feet of water. No one lost. She is expected to be raised at once.

Wrecking under Difficulties.—We find the following curious story, from the Buffalo *Commercial Advertiser*, for what it may be worth: The Canadian bark *Arabia*, with a cargo of wheat from Chicago to Montreal, was stranded at Port Dalhousie, head of Welland Canal, on the night of the 7th, in the severe storm then raging. The vessel pounded over one reef, and finally brought up on a deep bight on the edge of and between two shoal reefs of rocks. The cargo was insured in the National Insurance Company of Boston, and other American companies. The vessel was insured in Canadian companies. Captain John Rice of Co. patched by the agents of the National Co. from Buffalo, with tug-pump and barge to the relief of the cargo and vessel. The inspector of the Canadian company, inspected the hull, being also at the wreck, a co authority commenced. The master of declining to take any positive position much delay. The insurers on the hull permit the pump to be placed on board vessel did not leak much, or the cargo to

off, as the vessel would be in danger of driving rther on the reef. He looked to the intcrest safety of the vessel only, and having the athy of the ship's crew, and the ports being cted, it delayed Captain Rice in his efforts e the eargo as well as the vessel. Rice perse- , however, and having the able assistance of in Rumsey Brown, and his powerful tug n, he managed to get the Canadian inspector , and seizing the opportunity lightered the of about 10,000 bushels on the night of the and got her off and into port during a strong f wind before daylight, without damage to vessel or cargo, much to the chagrin of the dian inspector and his sympathizers. The was dispatched to St. Catharines to be d, and the eargo in the lighter had to be ed and forwarded over the Welland Railway vessel at Port Dalhousie. Here the sym- ers made another point, and refused to take rgo out of the lighter by the elevator except per thousand for shovelling, and several delay. Rice managed to get the lighter ide the elevator, however, and letting go nchors and the centreboard of the lighter, ted them from moving and forced them to rge her, after a hand-to-hand fight with the lers. If American underwriters and shippers be subject to such dog-in-the-manger treat- and policy as evinced in this case by Cana- nsurers and carriers, they had better in decline insuring cargoes per Canadian ls.

Scottish Amicable.—We understand that the Manager and Actuary to the *Scottish Ami- cable* Life Assurance Society, vacant by the death Spens, has been conferred on Mr. Stott, the Secretary of that Institution. Mr. Stott, rmerly Secretary at the Head Office in Glas- nd is a fellow of the Institute of Actuaries England, as well as of the Faculty of Actuaries Scotland.

Scottish National.—At the Meeting of the *ish National* Insurance Company at Edinburgh Monday last, the new policies of the year were ed to have been 597, for £274,265. A bonus n was made to the policies at the rate of £1, r cent. per annum for the four years since £10,000 was added to the paid-up capital profits, and a dividend declared of 10 per er annum.

Death Statistics.—The number of deaths in o from 1st January to 30th September, were 956. The number above 20 years of ng 396. Accidents produced 13 deaths ; ng, 8 ; sunstroke, 4 ; intemperance, 3 ; , 1 ; 3 were shot ; 2 burned ; 3 killed by 1 poisoned ; and 1 frightened to death. the nine months 12 died whose united ere 919, and the average was 77 7-12. five women died whose united ages reached one attaining 100, and another 102. An imate ratio of deaths in the city is given ows : 1864, one in 49 ; 1865, one in 49 ; ne in 53-7 ; 1867, one in 69.

Royal.—We understand that the appointment manager to the *Royal* Insurance Company d vacant by Mr. McLaren's accession to sition formerly held by the late Mr. Dove, conferred upon Mr. C. G. Fothergill, the t secretary to the London office. While ing that London loses so courteous and able eman as Mr. Fothergill, we are pleased to his successor Mr. T. Septimus Marks, for ears chief clerk of the London office, a an eminently adapted for the post he has lled upon to occupy.—*Insurance Record.*

Hudson Bay.—Hudson Bay Company's shares been freely purchased, on a report that is about to be brought into the Canadian s of Assembly for the purpose of buying the ity of the Company.—*Herepath's Journal.*

MAIDEN INSURANCE.

One people in Europe has, for some generations, attempted a novel form of assurance which is or the girls of the middle and higher classes. In Denmark, among the nobility, there has existed for some time what may be called "Maiden Assurance Companies." The basis of these were property belonging to the old cloisters, afterward secularized. A Danish gentleman, who should wish to secure his daughter against the contingencies of fortune, deposits at her birth, we will suppose, $2,000 in one of these companies. The child receives during her minority four per cent. interest annually ; at eighteen she comes into a higher income, regulated according to the property of the company ; at twenty-five she receives a still higher premium, and rooms and appointment in the buildings of the former cloister, if she desire, and again at thirty-five a still more liberal income, based again on profits.

If she die or marry, the deposit reverts to the funds of the association. In certain cases, however, if she marry and become a widow, she receives an annual stipend. The probabilities are so great that a given female child will either die or marry, that the company can afford to pay liberal interest (for Europe) on the deposit of the father, and will soon accumulate funds for the survivors who live as single women. A class of persons who are most exposed to hardship in modern society—unmarried women of the cultivated ranks—are thus ingeniously guarded against poverty and loneliness, having a sure income after a certain age, and respectable quarters with others of like position and tastes.

We see not why some similar assurance to these Danish companies might not be started in this country. The evil exists painfully in the older States—of the unprotected condition of daughters in the middle classes. The worst poverty ever known is of cultivated young women who are not strong enough for manual labor, and not clever enough to strike out new professions. Woman at the best, in artificial society, is at a disadvantage with men, in the "struggle for existence." She ought to have the help of an assured income ; and in this, as in all insurance, why should not the fortunate who marry, help the unprotected who do not happen to find a husband to their liking? Why should not a father take advantage of the chances of death and marriage to secure his daughter against possible poverty and hardship?

If it be urged in objection that such security would tend to discourage marriage, already too infrequent, we would reply that nature is stronger than any pecuniary motive, and few women could be found to reject a husband, because they sacrifice thereby a few hundreds a year. Or, if it be urged, that better than assurance is education of women, we answer that a man's insurance of his family does not prevent his educating them, and that the certainty of a small income would not deter from, but rather aid, young girls in training themselves thoroughly.

There are two elements in the insurance proposed easily calculated—the ratio of death of female children, and the ratio of marriages under certain years. Surely some of the ingenious brains who are now contriving insurance for every possible object might frame a sound system of insurance on this basis.

IMPORTANT MEETING AT LLOYD'S.

A meeting was held in London in the committee room of Lloyd's, to consider the relative position of underwriters and merchants as ascertained by the recent judgment in the case of "Dickinson v. Jardine." The judgment of the Court of Common Pleas in this case determined that where goods insured are jettisoned—that is, thrown overboard in the hope of saving the remainder of the cargo—the assured, if the goods are totally lost, according to the other conditions of the policy, is entitled to immediate settlement as for a total loss notwithstanding that the assured can recover the arrival value of the goods jettisoned by general contribution from the owners of all property arriving safe after the jettison. The following resolution were passed :—"1. That, in the opinion of this meeting, it is not desirable that the responsibility of collecting general average from the contributories to the same should fall upon the underwriter." "2. That it is therefore advisable that policies of assurance should be so framed that in case of any loss to the subject matter of insurance by a general average act, the claim upon the other contributing interests be recovered by the assured in general average as heretofore." "3. That, in order to carry out the decision in 'Dickinson v. Jardine,' and at the same time to preserve the legitimate rights of the underwriter, it is advisable to insert a clause in all goods and freight policies to the effect that in cases of loss to the subject matter of insurance by a general average act, the underwriters thereon could pay the difference between any amount payable by the contributory interests and the insured value, except in those cases where the underwriter is, by terms of the policy and the events which have happened free from any claim for particular average."

The following further resolution was submitted and agreed to :—

"4. That in order to carry out the feeling of the meeting, the following clause be recommended for insertion in all policies :—'Should the property, hereby insured, be injured or destroyed by a general average act, any claim the assured is entitled to make in respect thereof, by way of particular average or total loss, shall be subject to the deduction of the sum payable to the assured by the other contributory interests of ship, freight and cargo."

"That, in the opinion of this meeting, it is desirable that, immediate steps should be taken to obtain an act of parliament for the purpose of most clearly defining and regulating the duty of the shipowners to collect general average from the contributories and to distribute the same.

A vote of thank was accorded to Mr. Goschen for taking the chair, and for the manner in which he had conducted the business ; and it was arranged that a copy of the proceedings should be sent to every chamber of commerce, and be circulated as widely as possible.

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Nov. 3, 1868.

Money continues very easy, in fact the difficulty is, how to invest it, more especially on short dates. There is a great scarcity of good bills. There is no speculative feeling as regards produce of any sort. The demand for money for the ordinary purposes of trade is less than usual; the imports having been light, consequently the requirements for the payment of duties has been small. On the other hand, the remittances from the country have been heavier than for years past, and constantly increasing, so that funds here are entirely in excess of all demands. The question now arises, how to employ the surplus. We have invested a very large amount in buildings and public improvements. Our stocks and shares of all sorts are held at exceedingly high rates; in fact, above their positive value, and yet money is accumulating and seeking investment. What will be the outlet? I think the solution of the question not so difficult but it requires some sounding of the financial waters before committing myself to a decided expression of opinion.

There is a speculative enquiry for Bank of Montreal stock, and the price has gone up to 140. I cannot give the reason for this rise, except that

should the Provincial Bank note system be carried out, the Bank of Montreal will to a certain extent stand in the same position to Canada that the Bank of England does to Great Britain. As will be seen by your list of Montreal stocks, &c., there is a decided advance in all good securities, and holders are not anxious to enter the market except at extreme rates. *Silver.*—The discount on silver has fallen to three per cent., being a lower rate than it has reached during the last four years, and showing that the export of over a million dollars last spring must have had a favourable influence on the market. This low rate is operating rather against the export movement, and I understand it is Mr. Weir's intention to delay the shipments until the close of the fall trade permits silver to return and the discount to advance. I give price of gold 133⅜. Greenbacks, buying 25¼, selling 24¾ discount. Silver, buying 3, selling 2½ to 2¾ dis. Drafts on New York, 25 buying, 24½c. to 24⅝c. selling.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The stock market has been rather more lively during the past week, and closed firm with an upward tendency in quotations.

Bank Stock.—There were several small sales of Montreal at 135¾, and buyers now offer 136¼. Ontario has again advanced, buyers to-day offer 103 and no sellers under 103½. Toronto is wanted nominally at 117, but there is no stock in market and buyers would pay an advance on that quotation. There were sales of Royal Canadian paid-up at 92½, and small lots are still be had at that figure. Commerce is in demand at 101; very little offering. Core has advanced 5 per cent., buyers now offer 10 with no sellers. Merchants' sold at 107 to 107½, and is in demand. Quebec is offered at 101, and there are buyers at par. For City 104 would be paid. There are sellers of Du Peuple at 104½; no buyers. Jacques Cartier sold at 108. In other banks nothing doing.

Debentures.—Canada sterling five per cents are offered at 91½; no six per cents to be had. Dominion stock readily commands 103. Toronto are in rather more demand, and are readily taken to pay 7 per cent. interest. There were small sales of County at rates to pay about 6½ per cent. interest.

Sundries.—City Gas is in demand at 105 to 105½, none offering. Building Society stock is again higher. Canada Permanent sold to-day (3rd Oct.) at 122½ to 123. Western Canada sold in small parcels at 115, which rate is now freely offered. Freehold is wanted at 107 to 108. British America Assurance offers at 56 with buyers at 55. Montreal Telegraph dull and in no demand at 120. Canada Landed Credit is wanted at 72½ for stock all paid. Few good mortgages offering. Money continues plentiful on undoubted security.

INTERNATIONAL COINAGE.

The report of the Royal Commission appointed to consider the possibility of establishing an International Coinage, together with the Minutes of evidence, has just been issued in London. The following are the conclusions at which the Commission arrived:

"The adoption of the proposal of the Paris Conference of merely reducing the value of the pound to that of 25 f., would facilitate the comparison of sums stated in large coins, but the difficulty would remain of comparing sums expressed in pence in England, in centimes in France, or in cents in the United States, and it is seldom that statements of prices, or statistical returns do not contain sums expressed in these small denominations. The reduction of the value of the pound would disturb all existing obligations, and would cause the many and serious difficulties which we have stated in the earlier part of this Report; while if at any future time a more complete assimilation of coins should be determined upon, a further change would be required, in many respects more difficult of application. The measure is, after all, only a partial measure, and although advocated by some witnesses as good in itself, and as a step to further assimilation, the object sought for by the witnesses connected with the trade and with the scientific bodies of this country would not be fully attained by anything less than a complete assimilation of the currencies of different countries. Several witnesses who took this view deprecated any change unless a complete assimilation of currency of moneys of account as well as of coins were made, and it is a serious objection that by this step all the admitted evils of the change in the value of the pound would be incurred, while the advantages by which it is anticipated that those evils would be compensated would not be attained. Upon full consideration of all these circumstances, we do not recommend that this country should merely adopt a gold coin of the value of 25 f. to be substituted for the sovereign. We have felt it to be our duty to state the grounds on which with a view to the general interest of the commerce of the world, the English sovereign and pound might form a convenient basis for international currency. The consideration of such a question, however, leads to one of a much more important character,—namely, that of a complete assimilation of the currencies of at least the principal commercial countries. We entertain no doubt that an uniform system of coins, bringing into harmony the various standards of value and moneys of account, alike in their higher denominations and their lower subdivisions, as well as an uniform system of weights and measures, would be productive of great general advantage. The latter proposal, however, is not referred to us; and we will only say, therefore, that we do not consider it necessary that any measures for the assimilation of the currency of the principal countries of the world should be postponed until steps are also taken for the assimilation of weights and measures. We are not insensible of the many and serious difficulties which must attend any attempt to effect a general assimilation of the currencies of different countries. Under any circumstances, great inconvenience must be encountered by many, if not by all, the countries joining in any monetary convention for such purposes; but the arrangement is one in which all commercial countries are interested, and none more deeply than our own. It would obviously conduce to a probable agreement that the burden of inconvenience should not press very unequally on any of them. What should be the common basis of their currencies, what international coin should be adopted, what proportion of alloy it should contain, what should be its sub-divisions or multiples, are all matters on which an agreement must be arrived at before any assimilation can be attained. On all these points widely different opinions may be held in different countries; and on the determination of them depends the degree of inconvenience to be sustained by each country. To what extent of inconvenience any country may be willing to submit for the sake of establishing a common international system of currency can only be ascertained by communication with the Government of each country. It is obvious that before any agreement can be concluded very difficult and complicated questions will have to be settled, concessions will have to be made on one part and on the other, and it will also be an important matter for consideration how far an agreement may be facilitated by making the changes which are necessary bear on any country as lightly as is consistent with the attainment of the common object. The assembling of some general international conference on the subject seems to have been looked forward to by many members of the Conference at Paris; and we are disposed to think that all the various questions might be best considered, the various interests of different countries discussed and their conflicting views reconciled by authorized representatives of the different countries meeting in such a Conference.

"Halifax, C. P. Villiers, Stephen Cave, Wilson Patten, M. Longfield, John Lubbock, Thomas Baring, L. N. de Rothschild, J. B. Smith, Thomson Hankey, John G. Hubbard, Thomas Hunt, G. B. Airy, Thomas Graham, C. Rivers Wilson, Secretary.

"July 25th, 1868."

Mr. J. B. Smith, Sir John Lubbock and Mr. Hubbard have made supplementary reports.

BANK OF ENGLAND.

Returns for the week ending October 14th:—

Issue Department.

Notes issued	£34,083,[illegible]
Government debt	£11,015,[illegible]
Other securities	3,984,[illegible]
Gold coin and bullion	19,083,[illegible]
Silver bullion	
	£34,083,[illegible]

Banking Department.

Proprietors' capital	£14,553,[illegible]
Rest	3,081,[illegible]
Public deposits (including Exchequer, Commissioners of National Debt, Savings' Banks, and Dividend Accounts)	3,838
Other deposits	20,231
Seven day and other Bills	701
	£42,406
Government securities (including Dead Weight Annuity)	£15,935
Other securities	15,822
Notes	9,567
Gold and silver coin	1,080
	£42,406

LONDON MONEY MARKET.

The Money Market has shewn a rather decl[illegible] tendency this week. The supply of capital, [illegible] the payment of the dividends commence[illegible] Wednesday, has much increased, whilst th[illegible] mand for money has remained extremely ina[illegible] consequently the rates of discount rule lowe[illegible] ing 1⅜ to 1½ per cent. for first-class paper i[illegible] open market, whilst advances on British Go[illegible] ment securities are offered at 1 per cent. o[illegible] Stock Exchange without finding many tak[illegible] *Investor's Guardian, Oct.* 16.

Boston Prices of Nova Scotia Gold St[illegible] —A Circular gives the following quotations

	Bid.	A[illegible]
Boston and Nova Scotia	40	5[illegible]
California		[illegible]
El Dorado	55	[illegible]
Hayden and Derby	15	[illegible]
Uniacke	40	[illegible]
North American	03	[illegible]
Ophir	90	[illegible]
Orient	20	[illegible]
Palmerston	59	[illegible]
Renfrew	03	[illegible]
Sherbrooke and New York	15	[illegible]
Wellington	30	[illegible]

Ophir is in good demand at 90c. Palm[illegible] looks strong; also El Dorado. Welling[illegible] weak. Orient is offered at 25., and no b[illegible] There seems to be a disposition to buy up B[illegible] and Boston and Nova Scotia at from 3 t[illegible] per share. Money has been scarce, but [illegible] easier.

RITISH JOINT-STOCK COMPANIES.—The number of limited companies in England is 393; and of unlimited companies 12. In Ireland there were registered within the same period 20; and in Scotland 17 limited and 4 unlimited companies. A summary which is appended to the return is somewhat interesting as showing the decline in the limited liability fever during the last five years. In 1863 there were 783 companies registered, with a proposed capital of £139,982,242, in the following year the number increased to 992, with a proposed capital of £237,437,083 14s. Since then the falling off has been rapid, as shown by the following figures:

	Companies.	Capital.
18.....	1,013...	£205,391,818
18.....	752...	76,724,823
18.....	469...	31,444,982
18 (from Jan 1 to May 31)	201...	13,896,182

OMINION EXPRESS COMPANY.—At a meeting of the subscribers of the Dominion Express Company, held in Montreal, the following gentlemen were elected Provisional Directors :—Ira Gould, Walter Macfarlane, Victor Hudon, A. W Oglivie, M.P., William McNaughton, George D. Ferrie, Alexander McGibbon, George Heubach, and J. Kirby. Messrs. Carter, Pominville, and Beaurney were appointed Solicitors to the Company. Subscription books will immediately be opened in all other parts of the Dominion.

UR GOLD AND SILVER CURRENCY.—More than ten years ago a correspondent, writing on the silver currency, said that if our shillings were piled up the column would be 80 miles high. The late William Brown, M.P. for South Lancashire, when the subject interested in connexion with the decimal coinage, was staggered at this. So a gentleman in the Bank of England made a more accurate reckoning, and trumped our correspondent's conclusion by a result of 87¼ miles. Had the shillings been quite new, the pile would have been 116¼ miles high. The 87¼ was got from the worn coin in ordinary use. New shillings have 5 to the inch ; the average in actual circulation have from 19 to 20. When they come down to 10 to the inch, the Mint send them to the melting-pot. Many persons were not—perhaps are not—aware that our silver pieces are not coins ; they are promises to pay, like bank-notes ; only they are so near the promise in value that actual calculations would not yield a sufficient profit. The Mint undertakes to pay a sovereign for 20 of them, no matter how much worn, just as the Bank will give sovereigns for a note, no matter how much worn or crumpled. So those who think it a hardship that a deduction should be made for light when none is made for light silver, may see their error.—*Athenæum.*

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Nov. 3, 1868.

Since my last very little of interest has transpired. This is the commencement of the dull season, the Fall trade being pretty well over, and the Winter trade not having commenced. Taken together the business has not been very dull, the late grocery sales having caused some stir in the branches besides groceries. We have had a heavy fall of rain, but, in spite of that, the water in the Lachine canal is so low that it is scarcely possible to supply the different factories, and the heavily freighted propellers, &c., have difficulty in coming through ; such is the lowness of the water that some of our manufactories on the canal intend erecting large tanks and employing engines to pump the water from the river into them, so as to obviate the inconvenience experienced last winter. As regards the supply for the city, the prospect looks gloomy ; the new improvements have scarcely progressed beyond the foundation of the new engine-house, and fully two months must elapse before the works are in working order. As regards our different factories this short supply is of most serious account, they calculating for their motive power on an unlimited supply ; the only means by which such can be secured is by deepening the Lachine canal, which could easily be done, considering the rise is about forty-five feet. The mill sites are too valuable to the Government to run the risk of losing, if a small sum will render them serviceable all the year round.

OUR PRODUCE market has been quiet. Prices have not materially fluctuated since my last. The shipments continue light; apparently shippers in the West are not disposed to give in to the prices which must rule in Great Britain. The wheat harvest there shows a surplus of some fifty-eight millions of bushels over last year, and that taken against the amount annually required, will show such a comparatively slight deficit in the amount required for consumption that prices must materially decline and our shippers must accept the situation. Sales of flour have been considerable during the week, prices ranging firm for strong supers at $5,45 to $5,50, and other brands at $5,15 to $5,30. For No. 2 the sales have been considerable at $4,85 to $4,90. Wheat has been dull, U.C. Spring worth $1,20 ex cars, and $1,15 by the cargo ; prices are however too uncertain to give reliable quotations. U. C. Red winter sold as high as $1.20 to $1.22½ ex ears. Coarse grains continue very high, and are likely to remain so. I notice that the crops throughout Great Britain of barley, oats and peas, are exceedingly light, and as the supplies from this side will fall short, we can hardly look for any reduction in prices here. In provisions, pork continues dull, the large quantity of hogs thrown on the market having kept down the prices. and also a large import of barrelled pork from the West, induced by the high prices that ruled during the summer and beginning of autumn. In butter there has been an active demand, and large shipping parcels have been sold at 22½c. to 24c., a long price for this time of the year, but which fully bears out my remarks made as far back as July. Cheese and lard are about stationary in price, with a fair demand. Ashes sell freely at 1st pots $5.92½ to $6, according to tares ; 2nd, $5.15 to $5.20; 3rd, $4.60 to $4.65. Pearls, $5.55 to $5.70.

GROCERIES.—As stated in my last the sales were not satisfactory, the audiences were moderate and the bidding slow. At the same time, neither section of the Province is overstocked, the only fear has been that in overbuying, the merchants ran a great risk, although the crops were generally good, still there were liabilities outstanding on the part of the farmers and country storekeepers, that rendered any great extension of credit unwise. Here in Montreal we are not overstocked, the only extra supply being of fruits and light wines. As far as concerns the first, we feel certain that owing to the short supply of green fruits and the scarcity of home made provisions, all imported fruit will sell readily during the winter, and that our (at present) superabundant stocks will be worked off at full rates. For all fish there has been an active demand, and extreme prices have been obtained at auction as well as at private sale. The old question of fish inspection is agitated. I shall have something to say concerning it in my next. Sugar is lively, but molasses more especially so, as the high price of butter always has a great effect on this article.

MANUFACTURES.—The manufacturing interests have lately been more active, and sales beyond general expectations. A fair amount of dry goods have been worked off, the fall business closing up with more buoyancy than was generally looked for. Hardware has been active and for some time an active trade may be looked for, as the heavy staples must be shipped before the close of navigation. In the boot and shoe trade more activity has been experienced than for some weeks past ; the late wet weather has given an impetus to the demand for heavy wares, and all our manufactories are working on full time. Prices which were expected to rather recede, remain firm, and the tendency is, if anything, towards a rise. This activity has had the effect of causing more animation in the leather trade, and an advance in the price of the heavy staples.

Toronto Market.

Trade for the week has been good considering the stage of the season. Though the bulk of the fall trade is quite over there is a good deal doing with the country merchants in the way of sorting up stocks which have been broken.

BOOTS AND SHOES.—A fair demand from the retail trade keeps manufacturers well employed, so that there is no accumulation of stock.

GROCERIES.—*Sugars*—Are about a quarter of a cent better in consequence of a corresponding rise in the New York market. The *Financial Chronicle* of the 13th says: "The unsettled condition of affairs in Cuba continues to operate with force upon the market. From this cause, immediately after the date of our last report, there was a sharp advance of a quarter of a cent upon the goods taken by refiners, who were the active operators. The excitement, however, ended in a reaction which is but just passing away. Sugars receded ⅛ cent again, and closed at ⅛ advance on the last week's prices. The imports of the week were small." *Teas.*—There is good enquiry for teas of every grade, and a good many lots are moving within the range of quotations. *Fruits*—Are much firmer, owing to a considerable advance in prices in England, and New York and places of growth. Importaters have been selling large lots of Valencia raisins at 7c. to 7½c., and they are now held for 7½c. to 8c. in jobbing lots. *Fish*—Of every kind are very fine, and likely to be higher, owing to a heavy demand and light supplies. *Rice*—Firm and steady. *Tobaccos*—are without change.

APPLES.—A considerable trade is being done in shipping apples eastward, where there appears to be a large demand for them. One line of vessels here has contracts to carry 6,000 barrels, a portion of which have already gone down. They are worth $1.75 to 2.75 per barrel.

GRAIN,—*Barley*—Receipts by cars for the week 19,635 bush., against 24,750 bush. last week. The shipments across the lake for the week ending wth Saturday last were 61,986 bush., and 81,985 for the previous week. Of these shipments, 7,548 bush. went to Erie, 24,670 bush. to Toledo, and 41,360 bush. to Oswego. Total shipments as per Customs' returns, by lake, since the commencement of the season, 595,743 bush. The following vessels cleared with barley during the week named: the schooner Todman, with 7,600 bush., the Phœbe Catherine with 7,571 bush., the Jessie Macdonald with 4,922 bush., the H. P. Murray with 9,875 bush., all for Oswego ; the Antelope with 10,868 bush., the Sea Gull with 13,892 bush. for Toledo ; the J. G. Beard with 7,548 bush. for Erie. The market opened unsettled at $1.35 to $1.40, and owing to a semi-panic in the American markets tumbled to $1.15, from which it afterwards recovered, closing firmer at $1.20 to $1.25. Few sales reported.

WHEAT.—Receipts for the week 32,686 bush., and 51,358 bush. last week. Shipments for the week 11,392 bush.; the schooner J. J. Hill took 5,100 bush-, and the Wanderer 6,292 bush., both for Oswego. Fall opened with a fair demand at $1.30 to $1.35 for fair samples, but after the cargoes shipped by the above vessels were made up the demand fell off, so that there were no buyers at the close of the week ; sellers ask $1.32 to $1.35. Midge proof is nominal at $1.10 to $1.12. There is more demand for Spring, and sales of small lots were made at $1.09 to $1.11. *Peas.*—Receips by cars for the week 4,160 bush., and 2,907 bush. last week. Considerable shipments have been made eastward by steam.

The market is lower, closing dull at 85c. to 83c. *Oats.*—Receipts by cars 3,720 bush., and 4,000 bush. last week. The market has fluctuated somewhat, closing with buyers at 50c. to 51c., sellers asking 52c. to 53c.; no sales. *Rye.*—Nominal. *Seed.*—Timothy is worth $2.25 to $2.75. *Clover.*—$6.00 to $6.50.

FLOUR.—Receipts for the week 2,400 bls., and 1,090 bls. last week: there were good shipments eastward and by Grand Trunk. There is some demand for lots of superfine and very little offering. Holders ask $5.00 to $5.10; some transactions occured at $5.00. Extra is offered at $6.50, but is only worth about $6.00 Superior is held at $6.50.

PROVISIONS—*Butter*—Is held firmly at 22½c to 23c, no sales; pound rolls, 26c to 27c. *Mess Pork*—Nominal at quotations. *Dressed Hogs*—Selling at $6.50 to $7.50; not a great many have come forward. *Lard*—Quiet, at 14½c. *Bacon*—Held at 11c. *Hams*—11½c to 12c asked for lots. *Eggs*—Selling at 18c for packed.

LIVE STOCK.—The cattle market is well supplied; lots selling at $6 for first-class, and down to $4.50 for inferior. *Sheep*—$2.50 to $3 each. *Hogs*—One firm put down 6,000 hams during the past week. Live hogs are selling at $5 to $5.50. The average weight of live hogs to date was 191 lbs.

PETROLEUM.—There is good demand for consumption at quotations.

HIDES.—There were some large transactions in hides during the week at about 6c.

FREIGHTS.—Rates by steamer to Montreal are 30c. per brl. on flour and apples; on grain 7c. to 8c.; to Kingston, 2c.; grain to Chicago, by vessel, 3½c.; to Erie, 4c. U. S. cy.; lumber, to Oswego, $1.75, U. S. cy. Rates per Grand Trunk, to Montreal, 35c. on flour; to Halifax, 95c.; to St. John, 85c. Rates to Liverpool are by the Grand Trunk, via Portland—boxed meats, gross ton, 67s. 6d.; lard and butter, 77s. per ton; beef per tierce, 11s. stg.; pork per brl. 9s.

The Chicago *Tribune* of the 30th says: The movement in grain vessels at this point to-day was a large one, and rates were firm on the basis of 9½ to 10c. for wheat, and 8½c. for corn to Buffalo, by sail craft; 15¾c. for wheat to Kingston; 16c. for corn to Brockville; 16c. for corn to Prescott; 7c. for oats to Erie; 7½c. for corn to Windsor; 16c. for wheat to Oswego; and 13½c. for oats to Ogdensburg. In all there were sixteen charters. The number of vessels awaiting cargoes is comparatively light.

The Wine Trade.

SHERRY.—The vintage in Spain has at the last moment proved rather disappointing; the heavy rains coming upon the ripe fruit will, it is feared, have the effect of deteriorating the quality somewhat. This is unfortunate, as just before the gathering the vines looked everything that could be desired. The market demand is for good sound cheap descriptions; the lowest-priced wines are the scarcest. Quotations: Sound common, 14*l.* to 18*l.*; Cadiz wines, 20*l.* to 25*l.*; middling stout, 26*l.* to 36*l.*; fair to good, 38*l.* to 50*l.*; superior to fine old, 54*l.* to 90*l.*; very fine choice, 100*l.* to 250*l.* per butt in bond.

PORT.—The Douro vintage has resulted in excellent quality, but the great heat and drought has shortened the quantity. Dealers are stated to have made large purchases of the new wine, and prices at Oporto have been well maintained, the general impression being that the vintage will take a high rank.

FRENCH.—The transactions in this market are of a limited nature; nevertheless prices are firmly supported, the large business done at Bordeaux causing holders here to show no disposition to sell except at advanced rates. That sound low to middling Clarets are good value there is no doubt from the very fact of the Germans buying so largely at Bordeaux of the present vintage.

The gathering for red wines finished on the 3rd instant; the vintage is said to be less than an ordinary average in quantity, but of superior quality. More business has been done in this year's wines than probably ever was known so early in the season; consequently prices are advancing.

CHAMPAGNE.—The vintage in Champagne terminated about the 24th ult. The produce is good in quality, and in this respect, and also as to quantity, is decidedly above the average of ordinary years. The prices have been even higher than the celebrated year 1865. Never have champagne houses shown themselves so eager to purchase. Such, indeed, was the rivalry, that the whole of the grapes of the principal vineyards were bought before the gathering; and this haste on the part of the buyers has been a little to the disadvantage of the quality of some of the wines, for the proprietors assured of the sale of their crops, began to gather several days before the maturity of the grapes was complete. The result of this will be that generally the wines of 1866, whilst preserving a high character for delicacy and bouquet, will not possess the fullness and richness of the wines of 1865. The quantity of wine made is very large; in spite of this, there is not now a single cask of wine in the hands of the proprietors. In less than three days the whole of this year's production was sold. Very high prices were paid, which must be attributed to the eagerness of buyers rather than to the wonderful superiority of the wine.

BRANDY.—This market has lately exhibited firmness—in fact, sellers pretend to slightly higher prices, the reasons for which are reports from Charente of a greater deficiency in the crop than was anticipated; one-third of an average vintage is reported as the probable yield. This is expected to influence opening prices in an upward degree, which will in its turn probably give stability to qutations for old brandy, but must, or rather ought to, limit speculation in new spirit, considering the present large stock on hand. From our advices we should calculate one-half to be nearer than one-third of an average as the probable result, which would show a very respectable total in actual figures.—*London Grocer.*

Halifax Market.

BREADSTUFFS.—Oct. 27.—Flour without change and dull. No. 1 Canada $6.25 to $6.40. Strong Bakers $6.65 to $6.75. Extra Canada $7.50 to $8. Extra State dull at $6 to $6.40; No. 2 in good demand at $5 to $5.50. Cornmeal dull at $4.50 for kiln dried, and $4.40 for fresh ground. Oatmeal $7.70 to $7.80. Imports from January 1st to October 27th, 1867 and 1868:

	Bbls. Flour.	Bbls. Cornmeal.
1868.	149,307	42,145
1867.	159,999	30,536

WEST INDIA PRODUCE.—Sugars and Molasses remain without change. Large lots are being shipped out of our market and must soon affect prices here. Porto Rico, 6¼ to 6¾; Barbadoes, 5¾ to 5¾c.; Cuba, 5¼ to 5¾c.; Centrifugal Cuba, 6c., in bond. Rum scarce and in demand at 62½c. for Demerara and 51 to 52½c. for St. Jago.

St. John Market.

Oct. 25.—We have to report a further decline in our flour market. Receipts have been liberal, and as the demand has kept small, stocks have been accumulating. Holders are very anxious to sell, and almost any price that buyers would name would be accepted. In the absence of sales prices are nominal. Good No. 1 Super, is offering at $6.25 and some sales are reported under that.

The Transportation of Petroleum.

While cotton, grain, tobacco, and other leading agricultural staples of the country combined, are universally regarded as the basis of industry and commerce, little is said of Petroleum in the same connection, notwithstanding the fact that there is probably as much money involved in the last mentioned commodity as in any other single article of home production. Petroleum, indeed, has become a product, not only of the first necessity, but of the first importance, at home and abroad, each succeeding year since it became a considerable article of commerce, witnessing increased consumption in every civilized part the world; and every year seems to develop methods for utilization. It is not only almuniversally employed as an illuminator, but, the manufacture of soap, candles, wax, lubricat substances, and dye-stuffs, and as a motor, it become of essential use. After the first flu excitement attending the discovery of Petrole in Pennsylvania, grave fears were entertained t there might be, sooner or later, an exhaustion the supply; but these fears have been expelled succeeding years, during which there has been increase of production commensurate with t increase of consumption. It is true oil wells constantly being exhausted, but for each one t proves unproductive, a new one, or more, is su and thus the supply is kept up, and may now said to be all but inexhaustible. Petroleum been discovered in various parts of the world, thus far the wants of commerce have been mai supplied by the United States, which has a pr tical monopoly of the trade. The exports Petroleum from New York since the 1st of Janu are, in round numbers, 40,000,000 gallons, agai 20,000,000 gallons for the corresponding pe last year. From the United States the expo to date are, in round numbers, 70,000,000 gall against 42,000,000 the corresponding period year, an increase of about sixty per cent. T great bulk of the exports are from New York Philadelphia, though most of the business of latter port is on New York account. The incre of exports this year is mainly to Continental rope, as will be seen by the exports, a glanc which cannot fail to prove highly instructiv those who take an interest in the march of prog in this important branch of commerce. Leav out France, which takes crude almost exclusiv most of the exports to Continental Murope co of the Refined article, which is not only safe transport, as may be gathered from the fact vessels carrying Crude are subject to an extra i rance of three or four per cent., but is re cheaper to the foreign dealer and consumer. was with a view to retaining the entire busine refining Petroleum in this country that so str ous an effort was made at the last session of C gress to have the tax on the Refined pro reduced, and which, though it met with pa success, will, it is thought, ultimately be ac plished, since a monopoly of the refining pr must necessarily add some millions of dollar nually to the wealth of the country.

As to the risks incident to the transportati Petroleum there appears to be a great diversi opinion, though, as between Crude and Refi it is obvious that the former is by far the inflammable, and therefore more dangerous. liquid or product that will throw off expl vapor, must, to a certain extent, be dangero convey; but if the fear of accident were all to operate to the prejudice of common carri severe blow would be inflicted upon comm interests. Considering the immense comm afforded by Petroleum, the accidents direct indirectly chargable to the article, it must be fessed, have been proportionately small. leum and its products may be safely transp when not exposed to heat beyond a certain nized degree and when carried under proper lations of packing, but if these regulations observed, they may become exceedingly dang from their liability to explode from expansio heat. This opinion is borne out by a recent munication to the British Academy of Sci by M. Henri Deville, who stated that the product called petroleum increases in bul one-hundredth of its volume for every ten d of heat; and that if this expansion wer allowed for, explosions must take place. Petroleum has come to be an article of uni necessity, it is safe to say that ingenuity w vise means for the safety of its transport storage and handling, as it has done in th of all other extra hazardous commodities.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per sent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

Directors: H. A. McFaul, James Cavan, James Johnson, N. DeMill, William Delong.—*Treasurer*, David Barker *Secretary*, John Twigg; *Solicitor*, R. J. Fitzgerald.

THIS Company is established upon strictly Mutual principles, insuring farming and isolated property, (not hazardous,) *in Townships only*, and offers great advantages to insurers, at low rates for *five years*, without the expense of renewal. This Company has existed 12 years, during which period it has adjusted all losses in a satisfactory manner. It is managed with strict economy, and affords an opportunity of insuring with safety and reliance, and little expense, which accounts for its long standing and successful business which it has been and is now doing.

Picton, June 15, 1868 9-1y

Hartford Fire Insurance Company.

HARTFORD, CONN.

Capital and Assets over Two Million Dollars.

$2,026,229.29.

CHARTERED 1810.

THIS old and reliable Company, having an established business in Canada of more than thirty years standing, has complied with the provisions of the new Insurance Act and made a special deposit of

$100,000

with the Government for the security of policy-holders, and will continue to grant policies upon the same favorable terms as heretofore.

Specially low rates on first-class dwellings and farm property for a term of one or more years.

Losses as heretofore promptly and equitably adjusted.

ÆTNA

Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.
At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.
HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.
A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

Toronto, 1868. 38-1y

Briton Medical and General Life Association,
with which is united the
BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

aug 15-1yr

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,—I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tilfany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.
Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS
UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's
PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,
WITH THE OPTION OF
LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains
A LARGE REDUCTION OF PRESENT OUTLAY
OR
A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in tact for Policy-holder's heirs, or other purposes.

Meetings.

THE GORE BANK.

The adjourned general meeting of the shareholders of the Gore Bank was held in Hamilton on the 2nd November, Mr. Edward Martin, the President in the chair. The report of the committee appointed on the 3rd of August last, to examine and report upon the affairs of the bank, also a special report from the President and Directors, were read by the Secretary, Mr. McCracken. (Both those documeuts were published in No. 11.) Before the adoption of the Report should be moved, the Chairman desired to afford any information which should be additionally desired on the part of the shareholders, and he would be prepared to answer any enquiries to be put by gentlemen present. The statements presented in both reports were very complete, and covered nearly all the ground for enquiry. They showed a loss of $80,000 ou uote and bill transactions; but it was fair to explain that this had occurred upon ouly two or three special transactions, and that therefore it was not to be assumed that the general character of their bank business had been unremunerative. The exceptional instances he would not define by name, as a portion of the paper was still recoverable, and it would not be prudent to refer iu precise terms to unclosed business. The main question, however, was what was best to be done to meet these losses, and their proposition had been to reduce the value of their stock to, say, sixty cents on the dollar. Legislation would be required for the various alterations proposed to be effected in their position, and that they (the directors) desired to take authority to seek for.

Some questions were put by stockholders concerning a discrepancy in the Statements of the value of the assets, which the President explained amounted to only about $6,000, which was further reduced by $3,000. Several stockholders expressed gratification that the discrepancy was so small.

It was moved by A. T. Wood, Esq., seconded by Colonel Martin, "That the report of the committee be adopted."

Mr. Street was in favour of the adoption of the report, with the exception of the clause for changing the name of the bank. He could see no good reason for this change, while there were, he considered, several weighty reasons against it. A large expense would be incurred, for no benefit that he could see. Some of the assets of the Bank, he thought, were undervalued in the statement. They had Government debentures amounting to $82,000 odd, face value, and these were put down at present market value, $6,000 or so less. The Government compelled the bank to hold these securities; why, therefore, should they be reckoued at less than par value? He thought there was an iuconsistency here.

Mr. Irving said that the adoption of the report would not bind the meeting to change the name of the Bank, as it must rest with an Act of Parliament. The adoption of the report would not bind the shareholders to act upon the recommendation of the Directors. He had heard the reasons assigned for the change of name: 1st, That under the name of the Bank of Hamilton, the institution would rise above a feeling which had been raised in connection with the name of the Gore Bank; 2nd, That the bills of the Gore Bank at present were executed in a style to invite counterfeiting. A considerable gain was anticipated from the past destruction of their current circulation, and that could not be correctly estimated without some such step as calling it in. He believed that a remodelling of their note plates was necessary in any case. He did not like the idea of amending a report that would in no way compromise the meeting. The matter of ehangiug the name would be an after consideration.

Mr. Street thought the adoption of the report would be binding upon the meeting to procure the changing of the name of the Bank.

Dr. Clark said that the Bank had nothing to thank the City of Hamilton for; the people of Hamilton were the first to labor for its embarrassment when it fell into difficulty. He did not see the grounds for the proposed change of name of this old established institution. The change of name was mainly of interest to Hamilton folk. Agencies had been closed where they were more profitable than Hamilton. At Guelph, for example, there had not been $2,000 lost in 25 years.

Mr. McMillan stated the recommending of a change in the name of the Bank, and a new issue of bills, was based mainly on the fact that the bills were counterfeited, and that the Bank had recently received eighty four bills that were counterfeit.

It was then moved in amendment by T. C. Street, Esq., seconded by D. Thompson, Esq., "That when the report of the Directors is adopted, the last clause be omitted."—Lost.

A second amendment, moved by Dr. Wm. Clarke, seconded by Dr. W. L. Billings, to the effect—"That the report of the Directors now read be not adopted as a whole; but that it be read elause by clause," was also lost.

Dr. Billings having strongly urged the desirability winding up their affairs, a long discussion ensued as to how votes were to be taken upon such a vital matter, and the Chairman having finally stated that he would put Dr. Billings' resolution after the business in hand, and would eount votes by shares, the Report was adopted without further discussion.

Dr. Billings then moved, seconded by Dr. Clarke, a resolution affirmatory of the advisability of winding up the affairs of the Bank, and empowering the Board to take the necessary steps for doing so. He was actuated by no feeling of hostility in bringing forward such a measure, but hitherto their transactions had been very unfortunate and their capital had been lost without any proper account having been given of it. Shares had been maintained at quotations of fictitious value, and shareholders had been induced to accept moderate dividends on the understanding that a surplus was being devoted to the creation of a Rest. That confidence had been undescrved, and moreover, he doubted if expenses of management would be any less upon a capital of $500,000 than upon one of $1,000,000. The same staff would be required. [No, no. A Shareholder—Reduction of the staff has commenced already.] It would be found very much more difficult to reduce an existing establishment than to originate a new one on an economical basis. Repeating the previously offered arguments against the cost of

alteration, he declared himself prepared to accept the 60 cents which his dollar was said to be worth, in preference to running further risk in connection with it. He did not of course propose that any less sum than that estimated by the valuators should be accepted, but this he should be pleased to realize, knowing that he could employ it at seven per cent. without either risk or trouble.

Mr. Irving said that any resolution now passed would only take the form of a recommendation, which would have to be considered before the Legislature. He was in favour of carrying the Bank on, as he believed that would be the most effective method for shareholders to realize their investments. He did not wish to press the project of a change of name, but thought unanimity of purpose and feeling was the first object to be attained among shareholders. He spoke at length in explaining his method of re-establishing the Bank on a new basis, and submitted the draft of a Bill he proposed to have presented to to the Legislature.

Moved by Mr. Irving, seconded by Mr. Winer,—

"Whereas, by the report of the committee appointed at the annual meeting of the shareholders, held on the 3rd day of August last, to enquire into the affairs of the Bank, it appears that the balance at credit of the capital account on 31st August last was $493,813 43, and it being expedient that the shares in the capital stock now paid up should be reduced to meet the losses made on capital, be it

Resolved: That it is expedient to amend the charter of this Bank in the following particulars:

1. To reduce the shares now issusd from $40 to $24 each share.

2. To increase the qualification of a director to the number of shares which shall be equal to $1,000 of capital stock wholly paid up.

And the president and directors are hereby authorized and instructed to procure the passage of a Bill by the Legislature of Canada, embodying the foregoing provisions, and are further empowered to insert such provisions therein as may seem best to obtain or preserve the right of issuing the stock to the previously authorized amount of one million of dollars, to determine the amount in which the share capital can most conveniently be divided, and to change the day for the annual meeting of shareholders."

Mr. Triller asked when the sixty cents could be realized. From past experience he would be rather disposed to take this amount if he could get it. Their charter would expire in 1870, and they might meanwhile liquidate gradually.

The Chairman said that it would be impossible to announce exactly how long it would take to collect and distribute a million of money, nor could losses be avoided where sales were forced. To let the charter expire was merely to let the bank bleed to death, as nobody could be expected to continue dealing with an institution that was doomed, when they might as easily do business with its competitors.

Mr. McMillan having pointed out the fact that the business of the bank was generally lucrative, notwithstanding some individual losses,

A Shareholder remarked that the value of their stock had risen five to ten per cent. in a few days, which he attributed mainly to the determination of the Board to recommend going on. Many of these gentlemen who desired to wind up, and who spoke so feelingly of their prospective losses, would not lose so much if they lost all they had invested (laughter), and he did not think it was fair for them, or others whose wealth could afford a sacrifice, to force the property of poorer men to whom it was comparatively of greater value.

Several other shareholders expressed satisfaction at the Report, and confidence in the position of the Institution. An opinion was expressed that if their temporary difficulties had not been published there would have been no necessity for very extraordinary efforts to meet them.

In reply to an assertion that assets forced upon the market would necessarily be sacrificed,

Dr. Clarke enquired what reliance was to be placed upon a statement of account representing as tangible property, assets which it seemed were only hypothetically serviceable. He would allow those who desired to carry on the Bank to do so.

A shareholder suggested that Dr. Clarke should sell his shares.

The Chairman pointed out that their resources were by no means insufficient for progress. They had not merely their capital of $500,000, but the disposal of $400,000 public money. And surely no one would say that a million was not enough to work with. He thought the suggestion regarding the over-estimate of their debentures a very just one. He showed also that the bank premises had been set down at only $12,000, while the ordinary rate of office rent in Hamilton justified them in standing at a considerably higher figure. They had thus seen that their circumstances had been stated at the worst, but even Dr. Clarke himself was inclined to estimate their property at 75 cents on the dollar, and this could surely be considered as no adequate reason for winding up their business. It was not business like to give up on account of losses, and they have found themselves at the bottom of their loss. Winding up was an expensive and tedious proceeding, and would be conducted without any incoming to sustain its drain. It was admitted that the business in Galt and Simcoe had been profitable, and lately that in Hamilton had been altogether profitable. Their business had been generally of the best character, and, although much of it had been lost, the cream of it was still recoverable. They had here prosperity at their doors. Errors of the past need not be repeated. There were rocks ahead to be easily avoided, and the lesson against too many eggs in one nest was not one to be readily forgotten.

After some further desultory conversational discussion the question was put on Mr. Irving's amendment (seconded by Mr. Winer), 40 hands were held up for the amendment and 12 against it. Dr. Billings and Dr. Clarke consenting thereupon to withdraw their proposition in deference to the views of the majority (applause), Mr. Irving's amendment was put as a substantive motion and carried unanimously, the result being received with enthusiasm.

A conversation took place regarding the sale of some bank property to a son of the Hon. S. Mills (a director) which the latter desired to have approved by the meeting. The matter had been brought up by letter from Mr. Thompson to the Board, Mr. Thompson having Mr. Chas. Magill's authority for stating that he (C. M.) would have purchased it at a higher figure had he been permitted. Mr. Cassels being called upon by the chairman, an elaborate explanation was offered.

It was thereupon moved by James Bain, Esq., of Galt, seconded by John Triller, Esq. of Wellington Square,—"That whereas the Shareholders, at the present Meeting, have been informed that the Directors have lately entered into a contract with Jas. H. Mills Esq., of Hamilton, for the sale to him of the property in Hamilton formerly owned by the late Colin C. Ferrie, and containing about nine acres, at the sum of nine thousand dollars, and having learnt from the President and Directors the particulars and circumstances of the sale,

Be it Resolved,—That it is the opinion of this Meeting that the Directors have exercised a proper discretion in making the said sale; and that in so far as the same can be effectual, the Shareholders now assembled confirm and ratify the same."—Carried.

Dr. Billings moved, seconded by Mr. Winer, a resolution authorizing an application to Parliament for change of title to that of Bank of Hamilton. He thought every facility should be afforded the Board for carrying on the business of the Institution profitably.

A general discussion ensued, Dr. Clarke suggesting the Wellington, Grey and Bruce as the new name. The proposal was then put, declared lost, and, by permission withdrawn.

It was then moved by Mr. Irving, seconded by Col. Martin, and resolved:—

"The shareholders present at this adjourned meeting, having received the report presented them by the directors, and having heard the explanations of the President upon the situation of the Bank, the circumstances attendant upon securing certain debts due to the Bank, and the disposal of unproductive property, desire to express the great obligations which have been conferred upon the entire body of the shareholders the labour and attention which the Board has bestowed in placing the affairs of the Bank upon a sound basis.

Be it therefore resolved: That a vote of thanks be offered to the Directors for the care given to the general interests of the Bank, and that the expression of full confidence in their management be recorded on the minutes of this meeting."

The President having been requested to leave the chair, and Mr. Street to take the same, the resolution was put and carried unanimously.

The President, for himself and the Directors, acknowledged the compliment. He said that Mr. Cassels desired to make a statement with regard to a matter which they had all heard talked of.

Mr. Cassels said that one of the Directors, Mr. McQuesten, had intimated something to the effect that the former, as Cashier, had misinformed or otherwise given an erroneous impression to the latter, as to the amount of certain large advances which had been made by the Bank, under his (Mr. C.'s) management. The books were, at every meeting, regularly placed before the Directors, and the standing of each account was there in detail, in a form the simplest and easiest for reference that had yet been devised. If Dr. McQuesten had not examined the books, it was his own fault. He (Mr. Cassels,) distinctly denied that he had ever kept back information from the Board, or from any member of it.

Since his accession to office, full and regular inquiries had invariably been made of all applicants for discount, and no discount had at any time been granted without the approval of the Directors. Large discounts had been permitted during his absence in England, for which he could in no way be considered responsible.

Dr. McQuesten said he had never intimated to any one that erroneous information had been given him by Mr. Cassels, or that he had ever any reason to doubt the fact that the books, regularly submitted, showed the true estimate of each account. What he had said was that certain advances made were largely beyond what he had understood them to be.

A Shareholder present said it was not to be supposed that no wrong information was actually given. The question was—Did Mr. Cassels, knowing that one or more of the Directors were under a wrong impression as to certain debts due to the Bank, believing them to be much less than they actually were, still omit to set these Directors right? What should have done? This was an important point to be determined for the guidance of future Directors and managers.

Mr. Street protested against any attempt to shift responsibility fairly devolving on the Board to the shoulders of its officer. In the discussion which took place Mr. Cassels was fully exonerated from any negligence of accountancy, and the attention was expressed regarding his fidelity and established procedure of his office.

THE GRAND TRUNK.

The half-yearly meeting was held in London on the 22nd October; Sir E. W. Watkin in the chair.

The Chairman said that his term of office was expiring. He had always said that he did not intend to remain in the direction beyond a certain time, as his other engagements would not allow of it. He had ventured to state on a former occasion that the difficulties of the company

ng away. The increase in the net traffic was 80 in the past half-year over the correspond- alf of 1867. The gross traffic receipts in urrent half-year had nearly reached an in- e of £20,000. The expenses had been re- d, and he thought if things continued to pro- there would be a surplus to pay interest on rst preference bonds at the end of this year. e were now present in the room about 200 olders out of between 3,000 and 4,000; were stockholders present having interests e Great Western of Canada and Buffalo and Huron. They would agree that none of the lian railways were in a satisfactory state. reat Western of Canada, which was pro- the soundest of all, only paid a dividend at te of two per cent. per annum for the past ear, although the proprietors had been as- when it was projected that it would pay nds of 10 or 15 per cent. per annum. The o and Lake Huron was estimated when pro- to pay in the first seven years a dividend per cent., which would afterwards rise to 25 7 per cent., and those hopes had been held the firm of Messrs. Hesseltine and Powell at the estimated capital of £410,000 would exceeded; but the railway had eventually mething more than £100,000,000. The work- penses were not to exceed 50 per cent., al- they had since cost the Grand Trunk 108 nt., instead of the 50 per cent originally ted. Those calculations had misled every oncerned. The low class of the bulk e traffic on those lines from agricultural ce was similar to the mineral traffic car- n English lines, not paying much for car- Then there was the adverse effect of cli- u the rails, and other matters which ren- the result of working unsatisfactory. In ond report he made to the proprietors in t of the Grand Trunk, in July, 1862, he hem to understand that the working of rail- n Canada was not like the working of rail- n England. The Grand Trunk was then 1,100 miles in length, and he had told hat they might travel along the line for 20 miles without getting a passenger. Their as spread over long lengths of railway, and ffic was comparatively small. The original e of the Grand Trunk had not been com- and he did not believe that it would be sfully worked until it was extended to Hali- the Atlantic, so as to convey traffic from ricultural States in America to a convenient port. Various opinions had been expressed egard to the rates charged on the railway; ntleman who had visited Canada had ad- he lowering of the rates, while another man had recommended the raising of the The directors had not, however, reduced ates. The Government Commission ap- d in the year 1861 reported that the traffic railway was not sufficient to pay the work- penses; that during two and a half years it ot pay its working expenses, and that the y had not an adequate supply of plant. ation was situate two miles from Montreal; er places the railway could not approach the they had no elevation for the grain traffic, terprise was unpopular with the people, and mpany had no credit when he first went to da, in 1861, and the trains did not keep time. It was proposed that the capital be reduced, and that the railway should to pay its debts. He assured the proprie- at if it were not for his exertions to protect perty soon after he arrived in Canada, in it would have been sold in the course of a eks by auction. No doubt some mistakes en made, but he could assure them that effort had been made by the present board ect and improve the property. In 1862 profit on the working amounted to £142,- d in 1868 to £287,000, showing an increase years of one hundred per cent. They had gines in 1862, and 298 engines in 1868. In 1862 each engine earned 1,687*l.* in the year, while in 1868 each engine earned on the average 2,107*l.* They had 3,084 cars in 1862, each of which earned on the average 124*l.*, while in 1868 they had 4,104 cars that earned 153*l.* each, showing an increase in the earnings of the engines of 420*l.* each, and in the cars an increase of 29*l.* each. He then adverted to the proceedings of Messrs. Creak & Ritter's Committee, with a view to show that the line had been more carefully managed as to economy of fuel than they had represented.

(*To be continued.*)

Mining.

MINING ON LAKE SUPERIOR.

(From our own Correspondent.)

BRUCE MINES, Nov. 2nd, 1868.

I send you some facts as to the present position of mining matters in this vicinity, and shall keep your readers regularly advised hereafter of all movements hereabouts.

BRUCE MINE.

The position of this mine is pretty well known to Canadians, and I do not think it necessary to enter into a geographical description of it. The property containing the Bruce and Wellington Mines was purchased from the Montreal Mining Company by the present holders—the West Canada Mining Co., represented by the celebrated firm of Messrs. John Taylor & Sons, London, England. The property contains 6,400 acres, and is on the whole very valuable. Several large veins run through it, on the chief of which are workings, named respectively the Bruce Mine and the Wellington Mine. The Bruce Mine has been in operation since the year 1848, and the adventure has been more or less successful. The prospects of the mine are at present rather gloomy, all the workings being stopped, owing to the continued depression in the price of copper ore, which is having a most disastrous effect on copper mining, both on this continent and in Europe.

The veins which, near the surface, were very rich and productive have, at their present depth, (300 feet) somewhat fallen of in quality and this coupled with the depreciated value of the metal have caused the company, after the most energetic efforts, to abandon the thing for the time being.

The contemplation of this noble old mine, the pioneer of mining in Canada, has a very saddening effect. The once busy dressing houses, filled with men and boys, the hum and whirr of the powerful machinery, hauling, crushing, cleansing, and the various other operations and appendages of a rich mine, gave the whole affair a look of life and prosperity, which contrasted with the present desolate appearance of everything, fills the observer with sorrow, and the desire for the good old time of "high prices" to return.

WELLINGTON MINE.

Here the state of affairs is more cheerful. This mine is working vigorously. The deepest sinkings have reached 248 feet, and the vein at that depth shows itself rich and well defined. A portion of this mine is suspended, but it is at all times available, and will be worked when the price of copper will warrant it. The exploratory works are at present confined to one shaft and one level or drift. The ore returns are chiefly made from 5 stopes as they are technically termed, and will amount to 65 or 70 tons per month. This is mined by a force of 36 men. The average yield of the vein is about two tons per lineal fathom.

HURON COPPER BAY MINE.

This mine is wrought on a continuation of the Wellington vein, which runs through the property of the Huron Copper Bay Mining Co., and is held on lease by the West Canada Mining Co. This is undoubtedly a splendid property and its producing capabilities are very great, but like the rest, has not escaped the scathing effects of the low markets and portions of it are suspended temporarily. The chief workings are on one large and leading vein, in some places 24 feet wide with a N.E. and S.W. bearing. It has two or three tributaries on which very little has been done. The deepest point reached is 320 feet from the surface, at this point the vein fell of in quality, but as this is only one small opening on several hundred fathoms in length it is not a fair test of the value of the whole, and even here the vein is productive enough to work. The ore raised in this mine is about 240 tons of 18% per month. The number of men employed underground is 71, and the average yield of the vein is about 3 tons per lineal foot.

The ore produced by all these mines is a yellow sulphuret, having a matrix of quartz, calc spar and wall rock, which is greenstone. When discovered at the surface, the ore is generally a rich "grey," with portions of "horse flesh," these two kinds sometimes producing as high as 50%; but as the ore descends it lessens in quality, but in many cases increases in quantity.

Insurance.

INSURANCE MATTERS IN NEW YORK.

(From our own Correspondent.)

New York, Nov. 6, 1868.

You will probably recognize the recent spirited and decisive action of the Executive Committee of the National Board of Fire Underwriters at Chicago, as the "newest feature" in the fire business. When the National Board was organized some two and a-half years ago, the Fire business of the States was undergoing a rapid demoralization. The "cut throat" system of rate competition prevailed generally; risks of corresponding hazard, in different sections of the country were taken figures as various as their locations, and unscrupulous agents not only put reputable Companies into unnecessary expense; but in the general scramble for cheap insurance, which the mercantile classes had been educated to seek and expect, were enabled to get many weak corporations into an amount of business they had not the pecuniary responsibility to carry. Hence underwriting was being done at a loss to the Companies generally, and but for the pause then made, the better class of Companies would soon have been obliged to retire their capital.

How serious the lesson, how imminent the danger, is shown in the unanimity and alacrity with which extraordinary powers have been conferred on the Committee. Heretofore no sufficient number of leading offices have been willing to invest an Executive with sufficient authority to secure that *prestige* which would give weight to its *pronunciamentos*. But the present spirit of combination is a thoroughly determined one, inspired by a sense of common danger. Companies and Local Boards show no tendency to "secession." It would be proclamation of a purpose to renew insurance *guerillaism*, that could only disgrace the recalcitrants. Dismissal of the agent is now the penalty of the cutting rates. The report of the Rating Committee shows much hard work done in the Great West. The report of the Committee on Legislation and Taxation affords hopeful assurance that the several States will speedily be induced to revise many invidious, inequitable and oppressive laws, several of them having already taken such action. Especially with reference to taxation; it is clear that it should be based upon net earnings, and not upon the gross premium receipts. The recommendation for a repeal of all deposit laws, or making them reciprocal is equally important. Such legislation is however opposed to that free trade for which the "Mother Country," of both the Domin-

ion and the States, so stoutly contends. Another recommendation by this Committee, that each State require of its home and agency Companies an implicit annual statement of uniform character to be made in the month of January, is important. The time is not far distant when all the States must follow the example of Massachussetts, New York, Ohio, California and Iowa, especially if they hope to decentralize the insurance business, and keep premiums at home.

The broker war, like Ætna and Vesuvius, has its periodic eruptions, and is just now in full flame. Twenty-four offices, including several of such A 1 corporations as the Home, Continental, Royal, Manhattan, Washington and Republic, have united in a league, and after the manner of the fathers in 1776, have issued a declaration of independence. They will no longer pay brokerage, and will, without charge, place risks for their customers. You will not care to have me discuss this vexed question in your columns. There are some hundred and twenty brokers on the Brokers' Board, beside scores of semi-occasional fellows. This eager crowd of middlemen strive to skin 15 to 25 per cent. from the office premiums, though the statistics show that the New York offices, as a whole, have made no money for the past five years. Dividends have been merely interest dividends, and generally made at the expense of needed reserve. Allow me to express my conviction that if the New York fire brokers ever were a useful "institution," they have survived that usefulness. Many efforts have been made during the last 15 years to strike them off, but there has always been enough young and sturdy offices not "in combination," to keep them in countenance. Any movement to be effectual must be unanimous or nearly so.

The rapidity with which "Co-operative" Life Insurance Companies are springing up in different parts of the Union, revives the reflection that there is very little new under the sun. New York, Chicago, Cincinnatti, Philadelphia, Baltimore, Charleston, Enfaula, (Ala.), and other cities, are supplied with one or more. New York has three and may soon have ten or twenty. They are substantially like the insurance "little goes" that infested London at the commencement of the eighteenth century, and which were suppressed by a penal statute in Queen Anne's reign.

For a mere trifle, say $3 to $6 initiation fee, and $1 on the death of a member, the *insured's* family is to get $5000 at his demise. Such highly benevolent concerns need and have no charter, or authority for doing business. There is no guarantee or any possibility that the obscure and impecunious "promoters" will be able or likely to continue them, *nem con* the fact, that the obligations which they propose to assume are expected to run from one to thirty years. No notice is taken of the decrement or deterioration of life, or rate of interest, and there is no provision or assurance that the accumulated fund, if one is ever got, will be accessible to the family of a deceased member. The Insurance *Monitor* has been handling the Manhattan National Union, United States, and others of this ilk, without gloves, and I notice that these swindles are receiving attention in Chicago, Baltimore, and other quarters. If our Superintendent of the Insurance Department at Albany, has no power under existing laws to suppress them, an "enabling" statute will be passed when the Legislature meets in January. Meantime some hundreds of mechanics and labourers may be cheated out of hard earnings. Of course the business classes are not to be caught by the contemptible "shysters" who are pushing these 'little goes" redivivus.

Prominent among the causes which have secured for life insurance such great popularity, and unprecedented growth in the American Union, is the general application of the mutual principle, and the half premium note. You, on the other side of Jordan have seen enough of the irrepressible and acquisitive "Yank" to know that he is pretty shrewd. When he had got sufficiently well planted in business to give some attention to life insurance (about twenty years ago), he quickly saw that its "mission" was with the sentiments and affections in co-operation with the advancing spirit of a high Christian civilization, and that it could not live in the atmosphere of sordid gain. Hence the "proprietary" or English system has never been favoured by our people, and of forty-three companies doing business in this State last year, but four, strictly, were stock companies, having 4,975 policies in force, with $380,983 premium receipts in 1867, as against thirty-nine companies, mutual, with 595,165 policies, and $50,092,846 premium receipts in 1867, and total assets of $123,025,818, as compared with $2,523,137 in stock companies. There should be no such word as gain or profit in Life insurance, commercially speaking.

The recent organization of a proprietary company with $1,000,000 capital, and all the profits or return premiums to be paid to the stockholders, has brought the question of the mutual vs. the stock plan, sharply before the public. The mutuals have combined in some liberal expenditures for discussing this question. I know of one publication 25,000 copies of which are going into the hands of merchants, bankers, brokers, and other professional and tradespeople. As the readers of the *Monetary Times* do not require its publishers to be responsible for the views of correspondents, I will take the liberty of "guessing" that the stock plan never will be popular in the future, as it has always been unpopular in the past. The million dollar company deducts about 25 per cent off ordinary premium rates, in consideration of the policies being non-participating, but as most of the well established mutuals return 50 per cent of premiums to policy holders, besides in many cases paying six and seven for it on small capitals, it is obvious that Mr. Mille-dol. expects to make about 25 net profit on the premium receipts, which will be a decidedly good thing for the stockholders, but not so funny for the insured. The introduction of capital into life insurance for merely speculative purposes, is not only not necessary, but is to be regretted as it will tend to unsettle and demoralize the system devised for a purely benevolent and unselfish purpose.

M. A. C.

INSURANCE MATTERS IN MONTRAL.

(From a Correspondent.)

MONTREAL, Nov. 10th, 1868.

The recent judgement by Mr. Justice MacKay *in re* Henry Chapman & Co., vs, the Lancashire Insurance Company, is exciting a good deal of attention and not a little indignation from business men here. The claim is for a loss by fire that occurred in 1864. The judgement was given upon the following pleas, fyled in opposition to the claim :— 1st. Some informality in the award of arbitrators appointed to assess the damage caused by the fire. 2nd. Neglect on the part of the assured to notify the office of the occupation by a tenant of part of the premises in which the risk was covered, and also a failure to notify a further insurance on the same property. All of which was held to invalidate the claim.

Incendiarism is still rampant here. On Wednesday night some sheds in rear of a house on Radegonde Street were fired, but put out with but little damage.

On Thursday night the stable in rear of the dwelling occupied by Mr. Edward Hilton, in St. Genevieve Street, was fired, and in consequence of delay in the supply of water was totally destroyed, two horses and a cow were destroyed in the stable.

On Saturday night about 10.30 a fire broke out in a stable in rear of Bonaventure Street, it was about three-quarters of an hour before the water was let on, and then with so little force that the brigade had to use engines to force a stream, consequently a whole nest of wooden outbuildings were tot destroyed.

It is somewhat curious to note the epide form of these acts of incendiarism; within a w we have had four fires within a stone-throw each other, in the western section of the c whilst some three or four weeks ago we had s seven or eight fires within the same spac gr und in the eastern part of the city. Wou not be well if some of our scientific men wound (say after the style of DeQuincy's essa "Murder as one of the Fine Arts,") treat us i essay on the causes of this curious but evi fact, let him go into the subject in all its pos bearings, ascertain whether it may be owin malarious influences, or, if not, what?

I would suggest that *one-half* of our ornam double-barrelled fire-marshal should unde this literary task, and thus earn the gratitu the scientifically inclined, as well as the easily earned fees of the office.

CANADA LIFE.—The business of this Com for the past half year, shows an increase ov same period of last year of 59.23 per cent. i number of new policies issued; an in rea 54.01 per cent. in the new premiums, and per cent. in the sum assured.

FIRES AND ALARMS IN QUEBEC.—Mr. J. S guson, Chief Engineer of the Fire Depart furnishes the following statement of the n of fires and alarms of fire in that city durin six months ending the 31st October, 1868, a corresponding period of 1867, viz: 1868— 37, alarms, 36; 1867—fires, 35, alarms, 28.

—The Union Mutual Life Assurance C Maine, has received license to transact b in Canada, on depositing U.S. 6's of 81—$ B. B. Corwin, general agent, St. John, N.

—A petition has been introduced into the Legislature praying for an act of incorporat the "Ontario Mutual Life Insurance Comp

MARINE DISASTERS ON THE LAKES.— named Jas. Blessington was lost off the l *Gale*, near Point Pelee, a few days since.

The scow, *A. P. Waite*, which sank Colborne recently, was washed ashore at by the recent heavy gale.

The schooner *Tom Martin* arrived at borne on Saturday, the 30th Oct., in s condition. Both mast-heads were car and some of her sails gone.

The schooner *Fred. L. Wells*, of Bu wrecked on the 2nd inst., off Port Bru

da shore of Lake Erie, and is a total loss. was built at St. Catharines, in 1849, by L. kluna, measured 150 tons, rated B 1, and worth about $1,800.

e schooner *Kate Kelley*, grain loaded, went re at Sand Hills, seven miles below Clay ort, Lake Erie, on the 2nd inst., and will prove tal loss.

bout fifty vessels entered Buffalo on the 2nd entered protests—most of the damages to the sels being comparatively light, and confined to ainss and upper works. Quite a quantity of ain was wet.

e schooner *Sweepstakes* lost all her canvas but er light sails.

e schooner *Frontier City* was struck by the f off Ashtabula. She put back, and reached Buf lo in a leaky condition. She has discharged her argo.

e schooner *C. C. Trowbridge* lay four hours wit the sea making a clean sweep athwart her dec , and her port bulwarks completely stove.

Otain McKee, of the schooner *J. Beigler*, re- ort passing, Saturday noon, the barges *Empire* d *Michigan*, water-logged and abandoned, about we e miles off shore, near Grand River. The of the *Empire* remained intact, but both were rif ng rapidly toward the north shore, where e would stand a very small chance of hanging ge her long in the storm that was then raging.

T brig *William Fisk* came into Buffalo with r nvas badly damaged, as did also the bark *Jany Bissell*.

A Whitby, on 31st ult., the schr *H. N. Todman*, f Wellington, while running into harbor for shelter pol turn the wrong way and went behind the pier, where she pounded considerably. For- unately for her, the gale subsided, and she got a right.

T schooner *St. Paul*, with a cargo of coal, rolled on the 31st Oct., in the river below De- oit and was got off by the tug *Hector*, after sev l hours' detention.

T schooner *Kelly*, grain loaded, was driven ash seven miles below Port Burwell during the ga le, and has gone to pieces. The *Kelly* had a c go of 15,800 bushels of wheat, shipped by Milwaukee parties and consigned to Oswego. It is ured in the Ætna and Home Companies for 26,00. According to the register, the measure- ent of the *Kelly* is 350 tons, rate A 2, and value 16,00. She is owned in Oswego by Messrs. Day and Kelly—the latter commanding her.

Offices for Canada:—385 & 387 *St. Paul St., Montreal*
GENERAL AGENTS:—MORLAND, WATSON & Co.

SPECIAL NOTICE.

Policies effected this year will have a full Bonus at the next declaration of Profits.

The following are Examples of Bonus declared at the division of Profits, 31st December, 1857.

No. of Policy.	Effected in the Year.	Age at Entry	Sum Assured.	Bonus Added.	Annual Premium.
1,66	1865	20	$1,000	$65	$19 41
57	1863	30	5,000	545	123 54
1 50	1865	40	25,000	1,655	802 08
29	1863	50	15,000	1,650	657 50

NOTE.—The Policy-holders had the option of having in lieu of the above Reversionary Bonus,

(2) an equivalent in Cash, (3) of having a large accumulated Bonus payable if the expected average age be attained, or (4) of having the Policy payable on attaining a certain deferred age, although effected at the ordinary rate of premium: thus, the holder of Policy No. 297 had the offer of £173, 10s. ($867.50) cash paid down in lieu of the bonus of $1,650 added to his policy, or of having a Bonus of $3,800 added to his Policy if he lived 16 years and attained the age of 71; the holder of Policy 570 had the offer of having his Policy payable on attaining the age of 72½, in respect of the 1867 Bonus only:—at each successive division of profits an earlier age would be named for the payment to him of the sum assured.

The following are the advantages offered by the Commercial Union.—(1) PERFECT SECURITY.—The Life Policies in addition to their own separate Trust Fund amounting on the 31st December, 1867, to £169,623 (848,115.00) have the security of a guaranteed Capital of upwards of £2,000,000 ($10,000,000), and the invested assets of the Company, irrespective of the Life Funds, amounts to upwards of £350,000, (1,750,000.00). (2) LARGE RESERVES.—The valuation of the Commercial Union was made on safer principles than that of any other office doing business in Canada. The rate of interest for the future investments of the Life Branch was assumed in the calculations at only 3 per cent., whereas an average of 5 per cent. had been made of the Life Funds during the previous 5 years. The net or risk premiums only were assumed, and the value of the margin reserved for future expenses and profits, was nearly 3 times as large as the bonus declared. The rate of future mortality assumed was higher than by the Carlisle Table although the previous experience of the office was more than 50 per cent. under the Carlisle, showing the first class character of the business transacted by the Company. (3) BONUS.—A greater number of ways of receiving the Bonus are offered for the option of Policy holders than by any other Company. The above table giving examples of Bonuses at various ages speaks for itself. No other Company can produce so good a table. (4) ECONOMY.—The maximum expenses of management are guaranteed by the Company not to exceed a small per centage of the premium income. The average rate of expenses, including commission paid to Agents, was under 13 per cent. for the last 5 years. (5) PROMPT SETTLEMENTS.—Claims are paid one month after proof, instead of three months, the usual time stipulated for by other offices. (6) CURRENCY.—All settlements are made in Sterling.

Remarks on the advantages offered by the Commercial Union contrasted with other Institutions.—(1) AMERICAN OFFICES.—The rapid growth of these offices is well known, but as the Hon. J. E. Sanford, the Insurance Commissioner of Massachusetts, remarks in his report for 1867, the magnitude of these offices enforces the enquiry—one which is of profound interest to their Policy-holders. "Whether these companies are, after all, funding enough to meet their enormous future obligations, or whether—between the ambitious struggle to pay large dividends to the assured, on the one hand, and the temptatious to pay large commissions to agents, large salaries and perquisites to officers, and large Royalties to Stockholders, on the other,—the bottom of the fund may not be reached at some day, more or less distant, with a deficiency of a few hundred millions of dollars unprovided for?"

That these offices are open to doubt may be inferred from the condemnation of the practice of some of them by Mr. Barnes, the Insurance Commissioner of New York, and Mr. Sandford before referred to. It appears that in the assets are sometimes included commuted commissions paid to agents. Mr. Barnes speaks of such assets as of a "fictitious character;" Mr. Sanford terms them "*unreal* assets."

Mr. Barns draws attention with regret to the tendency to accumulate a considerable portion of the assets in premium notes, and points out the serious diminution of the cash reserve of realized assets held by note companies. If the accounts of the American Office be examined, the object of these remarks by the American Commissioners will clearly appear; take for instance the Ætna Office:—

The gross assets are given as..... $7,599,698.
But of this amount the sum of... 4,171,883,

is represented by premium notes or unrealizable assets. Only $316,450, less than 1-20, are invested in loans on mortgages (first liens), while upwards of $700,000, are invested in various Bank stocks. Considering the large number of Banks which fail in any long period of time, such investments can scarcely be considered safe for money held in trust to meet payments which may not become due for 30 or 40 years. But there are other objections to which American Offices are open. Since the suspension of specie payments, the sum assured by policies has been reduced 30 per cent and upwards. Those who effected policies for $1,000 previous to the war, and paid the corresponding premium, would in the event of death, now receive $1,000 in Greenbacks, which are only equal to about $700 Canadian currency. During the war between the North and South, it is well known that the policies of the Southerners, no matter how old their standing, were forfeited, and their premiums, paid over many years, were sacrificed. If war should ever arise between Great Britain or Canada and the United States, is it probable "Britishers" would be treated differently by the American Offices? Policies upon which, it may be, 20 or 30 years premiums had been paid, would be liable to forfeiture.

(2.) ENGLISH OFFICES.—The rates of the *Commercial Union* will be found somewhat lower than most of the English offices. The valuation was made according to principles which give a larger reserve than the method used by other offices. The accounts and balance sheet are published, and more information is given than by any other English Life Office.

(3.) CANADIAN OFFICES.—The Canada Life Office gives in its prospectus a comparison between the rates charged by English offices and themselves, but omits to compare the bonuses. We propose to supply the deficiency: To compare policies of the same standing: Canada Life Policy No. 3376, effected in 1861 for $8000, obtained in 1865 a bonus of $433,21. Commercial Union Policy, No. 570, effected in 1863 for $5000, obtained in 1867 a bonus of $545,00, that is to say, a larger bonus than a policy in the Canada Life, effected for $3000 more in amount. If both policies had been for $10,000, the Canada Life bonus would have been $541,51, while the Commercial Union bonus would have been $1,090,00, more than double that of the Canada Life. If the premiums be compared it will be found that at age 30 the premium for $10,000 is $223,00 in the Canada Life; in the Commercial Union, $247,08—a difference in *premium* on the five years of $120,40, while the difference in *bonus* was $548; or, to deal with present values, the Commercial Union would give for their bonus $385,00 cash, while the bonus of the Canada Life, at the same rate—a liberal assumption we venture to believe—would realize $191,27—a difference in favour of the Commercial Union of $193.73; thus the policy holder in the Commercial Union would be the gainer, in five years, of $73.33 (cash) over the holder of the Canada Life policy.

The Canada Life Office states that its funds, while yielding more remunerative returns, are yet invested with equal security. It is true the interest realized by that Company last year was six per cent. as compared with five per cent. of the Commercial Union, but if the account published this year be referred to, it will be seen that a large sum had to be written off for losses by investments. But this difference in the rate of interest is not, even if the investments were equally safe, as far as the bonus is concerned, of such importance as

would at first appear. It is the surplus interest realized, beyond the assumed rate, which gives the profit. The Commercial Union reserve for its existing engagements is based on the assumption that only three per cent. compound interest will be realized. The excess beyond that rate will be profit. Has the Canada Life Office also assumed three per cent, or has it assumed four or four and a half per cent, or even five per cent, as some of the American offices have assumed? The Canada Life Office is worked at a greater relative expense. The expenditure last year exceeded 20 per cent of the premium income. The capital is a very small one, only $125,000 paid up.

If the foregoing remarks be carefully considered, it will be seen the *Commercial Union* is entitled to the support of all thinking Canadians.

THURSDAY, NOVEMBER 12, 1868.

INSURANCE LEGISLATION.

It has been stated that Insurance Companies doing business in Canada have been harshly dealt with by our legislators. However, when we compare the enactment in force here with the laws respecting Insurance Companies which are in existence in the United States, we may find fewer grounds on which to envy our neighbours. A report presented by the Committee on Legislation and Taxation at the late meeting of the Executive Committee of the U. S. National Board of Fire, Underwriters furnishes us with some interesting facts relating to the various State Insurance laws. It appears that Iowa, although it has repealed its Deposit law, imposes a grievous tax of two per cent. upon the gross premiums received in that State. Missouri, besides requiring payment of taxation on the gross premiums at the same rate as is levied upon the citizens of the State, for State, County and Municipal purposes, exacts a license fee of $400 for St. Louis, $300 for Counties of 150,000 population, $60 for Counties of smaller population, &c. Maryland exacts a license fee from representatives of Companies of other States from $200 to $400 per annum, and has enacted that agents of Companies of other States shall be empowered to settle losses without the interference of officers of other Companies. Pennsylvania exacts $500 to $600 for State licenses. Minnesota requires a tribute of two per cent. upon gross premiums. West Virginia requires a deposit of $25,000. Tennessee requires a deposit of $20,000; exacts license fees, and State, County, and Municipal taxes. Massachusetts exacts from other State Companies a tax of two per cent. upon all premiums, and four per cent. from foreign Companies. A national tax of one and a-half per cent. on gross premiums, caps the climax. The Chicago *Spectator* recently published a compilation of the returns of 164 Fire, and Fire and Marine Companies doing business in the State of New York, which showed that these Companies disbursed in 1867, for national taxes, $1,209,259, and for State and local taxes, $998,272. A calculation of per centages, covering the business of three years, gave 5.14 as the percentage of total taxes to total premium receipts. The report to which we have referred states,—"Results show that the Government receives about one-half of the net proceeds of the business of fire insurance in the form of taxes."

In England the Companies are subject to duties of 1s 6d and 3s per cent. per annum on insurances against fire. In 1866, the sum of £867,961 stg. was paid by fifty-four Companies, as the gross amount of duty, into the Inland Revenue Office.

Under the Canadian Act respecting Insurance Companies, all Companies desirous of doing business here must obtain a license, and deposit the sum of at least $50,000 for each branch of business, subject to certain exceptions to be increased under certain conditions, in the case of foreign Companies to $100,000 or $150,000. Certain clauses of the Act provide for substituting in special cases for this deposit, either the investments already made or the securities of the Government of which provisions the Companies interested are at liberty to avail themselves. The deposit, if made in money, draws interest at six per cent. and will be repaid if the Company withdraw from business here. The Dominion Government imposes no taxes, and the charge for a license to do business is either nothing at all, or a mere nominal sum. Home Companies are, it seems, subjected to a Municipal tax in the nature of an income tax, but which is rather based on capital. Montreal charges $300 a year for allowing Companies to do business there; and Quebec, which has caused more loss to Insurance Companies than any other place in Canada, professes to charge $500; but we understand that this imposition has been successfully resisted. Toronto does not demand a license fee. So far as foreign Companies are concerned they are wholly exempt from taxes, except on their buildings. They merely pay the license f in localities where it is imposed upon th in common with all other companies. It w be seen, therefore, that Foreign Compan are actually in this respect in a better po tion than Home Companies. The sha holders in a Home Company pays his sh of taxes as such, and is at the same time co pelled to pay his private income tax. Th is another matter which may be appropriat referred to in this connection. Home Co panies are appealed to for aid whenever companies are to be raised, or fire engi procured; not only is this the case in locality where their head office is situate, all over the country wherever they h agencies. Foreign Companies invaria escape this "tax," by referring the matte their head offices.

It is apparent, therefore, that altho there are grounds of complaint, yet Con nies doing business in Canada are not heavily burdened as are Companies abr

If any one will take the trouble to com the attitude of this country towards In ance Companies with that assumed by o countries toward their own and Foreign C panies, it will be seen that our legisl appreciate the injustice done to the pe and the embarrasments imposed on insur capital by unwise enactments. The source of annoyance and wrong is the in cious action of certain Municipalities.

THE GRAND TRUNK AND MI BRYDGES.

There is no doubt that Mr. Brydges pies a position in many respects unenvi At least, he is exposed and subjected t tematic attacks which he is compell endure at a disadvantage. Were his ca as a railway manager, merely, called in tion, he could join issue with assailant meet the matter fairly on its merits, might as any officer of a company, respo to them and them alone, is entitled appeal to the fact of his retention in of the best evidence of the value placed his services. Messrs. X, Y, and even Z disapprove of Mr. Brydges' administra but, if his employers, the Grand Trunk way Company choose to keep him as Manager in Canada, they are at liberty so, although X, Y and Z become enrag what they consider their stupidity. B Brydges is subjected to attacks much difficult to deal with. His honesty pugned, and as his position necessarily enemies, the pack at his heels is as nu and relentless as any man could well collect. Newspapers have taken sides f against him, and he has the questi

ure of seeing his reputation tossed back-
s and forwards like a shuttlecock, in an
r contest between contending factions.
igh we have, at various times, pointed
what we consider errors in his manage-
of the Grand Trunk, we are none the
disposed to condemn those whose per-
or political motives lead them into a
persecution of the man ; to deprecate
attacks as are unfair ; and to disregard
criticisms as wear on their face malice
ense. It is an easy thing for Mr. Nelson
Ir. Any-body-else to put together in
hlet form the gossip of the streets, or
insinuations of the disappointed and the
ious ; and it is, unfortunately, no less
to procure publicity for all the charges
eming charges that can be concocted.
ave no authority, if we had the wish,
dertake a defence of Mr. Brydges ; he
ll able to stand up for himself. But as
een man and man, we think it grossly
r that he should be persecuted by the
itation through the columns of public
als of charges of personal dishonesty,
have not been carried to the proper
nal, or if they have been so carried,
either been disbelieved or disproved.
should the public be pestered with this
nable iteration." If Mr. Nelson has
es to make against Mr. Brydges, charges
involve the latter's honesty as a man,
his faithfulness as a servant, there is
per place where, and a proper time
they can be made, so as to secure not
examination but suitable action on the
Why, in the name of common sense,
he persist in raving through Canada
matters with which the Canadian public
power to deal? Those directly inter-
in what he has to say are the proprie-
the Grand Trunk Railway, and surely
elson is at liberty to take his stock of
s, grievances, insinuations and advice,
proper quarter, and there appeal for
vestigation. He casts his illegitmate
gs at our doors, and then rushes off.
were so dreadfully anxious about the
e of the Grand Trunk, he could easily
urnished some of those who attended
te meeting in London with a copy of
rges, and the evidence he relies on to
them. We have read over the pro-
gs of the meeting, but we do not find
r. Nelson is referred to. It does not
that he asked for a chance to make
is allegations, or volunteered a state-
f affairs. Although he knew that a
g was coming off in London, that a
opposition had been organized against
esent management of the Grand Trunk,
ot blazing away in Canada against
rydges, and wasted no inconsiderable amount of pens, ink, and paper, in his zealous crusade. We are not acquainted with Mr. Nelson's peculiarities, but we do certainly think that his conduct would justify the issue of a writ *de lunatico inquirendo*. Had he applied for an investigation and been refused, then there might be some excuse for troubling us out here with his columns of charges. As it is, Mr. Brydges is perfectly justified in treating such effusions with silent contempt. He is the servant and agent of the board of direction, and, while continued as such, is entitled to shelter himself behind them. They are responsible for his acts, and upon them should be laid the burden ; were such not the case every servant of a company might be held personally liable even where his superiors have endorsed his acts and assumed the responsibility of them.

The report of the meeting in London shews that Mr. Brydges was called to account there by some of the proprietors, and our readers may judge for themselves as to the strength of the defence. The *Railway Times* says : "Mr. Brydges spoke out clearly, resolutely, but not defiantly, so much so in fact, that he gained the ear, conquered the antipathy and acquired the confidence of his auditory." So far as we can see, it must be taken for granted that Mr. Brydges has successfully defended himself against charges of unfaithfulness and dishonesty ; that his employers accept his explanations ; and that something more will be required from Mr. Nelson than mere insinuations or assertions, before the public can be expected to lend credence to his letters or pamphlets. Opinions may differ as to the judgment displayed by Mr. Brydges in his management, but as regards his honesty the verdict thus far is in his favour.

At the adjourned meeting, Mr. Brydges was fully exculpated. Mr. Hodgson said that he thought Mr. Brydges had fairly and fully answered the questions put to him at the previous meeting, and he thought that it was only just to acknowledge it. Mr. Heseltine said that the charges he had made against the Canadian officials did not apply in all cases to Mr. Brydges, and for his own part he was perfectly satisfied as to the honour and integrity of the man. Mr. Creek said that while there were some of the answers to his questions which he should like to have had more in detail, yet, on the whole, he was perfectly satisfied with Mr. Brydges' explanation.

REGISTRATION OF BIRTHS AND DEATHS.

We are pleased to observe that there is every probability that legislation will be had on this subject during the present Session of the Ontario Assembly. Two members of the Opposition, Messrs. Boyd and Pardee, each gave notice of motion last week for leave to bring in a bill upon the subject. That of Mr. Boyd was read a first time on Friday last, but not yet being printed, we have been unable to ascertain its contents ; Mr. Pardee brought in his bill on Monday, but we presume he intends to incorporate it with that of his colleague. We, some time ago, (in vol. 1 p. 274 of this Journal), pointed out the necessity and urged the adoption of a law of this nature, and predicted that the introduction of one could not be much longer delayed. The promoters of the scheme are both able men, and the Act will therefore doubtless be well drawn ; when it appears we shall carefully consider it and hope to see it as perfect as possible. A badly drawn act which would not attain the desired end of a complete registration, would, for the purpose we have in view, viz : that of Life Insurance, be worse than useless ; as the returns under it, instead of being a guide, would mislead. An act of the kind has been in force in Nova Scotia for several years ; but it is only now, after two or three amendments, that registration under it is becoming anything like as full and complete as it should be. If a good Act be passed here, in a few years we shall be able, from the returns made under it, to frame insurance tables of mortality, similar to the celebrated ones of Dr. Farr, accurately representing the value of life in this Province, and which, therefore, will be, in every respect, more satisfactory than those based upon English lives, which Canadian Companies are now compelled to use.

In compliance with the request of our enterprising friends of the Commercial Union Assurance Company, we give place to a circular setting forth the advantages, all and sundry, that are to arise to insurers from placing their risks with that particular Company. If this document shall be the means of inducing any to take the steps necessary to insure their families or dependants against poverty and want, whether it is done through the excellent agency of the Commercial or any other sound Company, we are satisfied. There is no harm done by any Company giving the greatest prominence to its "peculiar inducements," or even comparing its terms and rates with those of other Companies in a fair and friendly spirit. By this sort of discussion the public are enlightened ; attention is drawn to the subject of life insurance ; opportunities are offered for impressing its advantages, and good may be done. We have no doubt that the "Circular" under notice will be generally read, and at some future time we may have something to say as to the *merits* of the questions raised.

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Nov. 10, 1868.

The ease in the money market still continues, and those seeking accommodation have better times generally than for years past. I have often tried to explain the causes of this ease Short imports during the fall; small demands on the banks for grain operations; unwillingness of capitalists to embark in any of the new schemes presented to the public, and the large accumulation of profits on business some years back, a considerable proportion of which has been invested in real estate, buildings, &c.; but there is still a large amount of capital seeking investment, consequently the high price of all good securities; the ease with which all good bills are discounted, even if they have only one name. The pressure in the New York money market has had no effect here, as we are in more or less of an independent position. Bank stocks have risen, and sales of Montreal reported at 142. Merchant's have also advanced, sales being made at 108¼, and now hold for 109. British and City are both out of the market. Ontario has risen to 102¾ to 103, at which prices it sells freely. Toronto, if offered, would bring 118½, and Jacques Cartier, 108½; but holders do not care to sell at those prices. Gore Bank has risen, and would readily bring 40. Under new and proper management, it doubtless will to a great extent recover its position, but that will depend greatly on the new Board, and whether the Hamiltonians will support it. Of miscellaneous stocks, City Railroad are in demand at 110½, but none offering. Richelieu wanted at 114½, but sellers ask much more. Gas steady at 133 to 135. Corporation Bonds and Stocks firm. Mining Consols dull at $2.60, but no buyers over $2.50.

NEW YORK MONEY MARKET.

Nov. 6.—The excessive stringency in money has been continued throughout the past week without abatement. The week ended with a bank statement showing a loss of $5,100,000 in legal tenders, and $4,100,000 in currency deposits, and with but a nominal decrease in loans. This exhibit added to the uneasy feeling among lenders, naturally induced unusual caution. The balances at the Clearing House book ceased to show the irregularities apparent last week at banks holding accounts of parties known to be engaged in operations for breaking the stock market; and from this it was inferred that there was a suspension of the artificial efforts to tighten money. However this may have been tried, there has been an increased difficulty in borrowing; and outside the banks the rate of interest on call loans has ranged from ⅛ to ½ per cent. per day, which the difference between cash and regular sales of stocks has been generally ¼ per cent. To-day the pressure resulted in a general break in the stock market, and at the close, money was offered more freely in many cases at 7 per cent.; which may possibly be the beginning of the relaxation of the artificial means for embarrassing the market, or the offers may have been made for the purpose of drawing parties into stocks with a view to again purchasing them. The money market and the stock market are entirely in the hands of a knot of unprincipled speculators, and the consequent feeling of demoralization exceeds anything experienced since the panic of 1857.—*Exchange.*

—A Woodstock paper says: "We are gratified to learn that the late manager of the agency of the Gore Bank here, who lately left the Province under mental excitement, has accounted for the money supposed to be in default. This will give much satisfaction to his friends, although it is no more than was expected would be the case."

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Business still continues limited, owing to the scarcity of securities. Nearly all stocks show an advance on last week's quotations.

Bank Stock.—Montreal has again advanced, closing with buyers at 140, and no sellers under 142. Ontario is active and in demand at 103 to 103½. Toronto has advanced with small sales at 119, which rate is freely offered. Small lots of Royal Canadian are offering at 92; little doing. Commerce is in demand; there are buyers at 104½, and sellers at 105½. Gore is in demand at 41; none on market. There were sales of Merchants' at 107 to 108. Quebec is active; there are buyers at par, and sellers at 101. No Molson's in Market. Buyers offer 104½ for City; none in market. There are sellers of Du Peuple at 105½ and buyers at 105. Jacques Cartier sold at 109. Union could be placed at 103½. Other Banks nominal.

Debentures.—There were sales of Canadian Stirling five per cents. at 91½, and of Dominion Stock at 102 to 104½. No six per cents. in market. There were considerable sales of Toronto at rates to pay 7 per cent. interest to purchasers. County are in great demand and very scarce.

Sundries.—City Gas is in great demand, but none in market; buyers would pay an advance. Canada Permanent Building Society is in demand at 122½ to 123; none in market. Western Canada sold at 115 and is in demand; there are buyers of Freehold at 107 to 107½; holders asking 108. Buyers offer 127 for Montreal Telegraph; sellers ask 130. Canada Landed Credit is enquired for at 70; none in market. A few large mortgages were placed at 8 per cent. interest. Money is easy on undoubted security.

French and English Savings' Banks.—The annual report concerning the operations of the savings' banks in France during the year 1867 was lately presented to the general meeting of the managers and directors. The *Débats* now makes the following observations on the general results. In making some comments upon it, it contrasts, the savings' banks of France with those of England: "England had in 1861, 640 establishments, 1,580,359 depositors for 937,430,000f., whilst France possessed 683, 1,300,521, and 401,313,151f. respectively. In 1866, England had no less than 4054—in consequence of the opening of the post offices (which receive from one shilling up to the limit for one year, namely, £30 sterling), 2,123,-124, and 1,049,031, 775f. In France the figures were 993; 1,748,944, and 528,917,299f. During that period the number of banks and accounts has therefore increased in a much larger proportion, in Great Britain, while the progression of the deposits has been more considerable on this side of the Channel. "England," the authors say, "has gained 81 millions, while France has improved by 127, a balance in favour of the latter of 46 millions." This result is doubtless satisfactory; but would it not be more so if the same facilities had been accorded here for the deposit of small sums which exist in England in the post office branches. The fact must not be forgotten that the British savings' banks contain more than a thousand millions of francs, although the mutual aid societies and co-operative associations form an increasing competition with them, while the French establishments only possess a little more than half that total. If it is borne in mind that the population of the United Kingdom does not reach 30 millions, while that of France approaches very slowly, it is true, 40, the conclusion must be come to that the contingent of small accounts put by, of which those institutions are the reservoirs, form little more in France than two fifths of that of England."

—A wooden railway is projected from Kingston into Loughborough and the township adjoining.

Railway News.

Northern Railway.—Traffic Receipt for w ending Oct. 31, 1868.

Passengers	$3,865 59
Freight	9,717 75
Mails and Sundries	1,918 60

Averages of New York State Railwa We are indebted to John Worthington, Esq copies of the Report for 1866 and 1867, o State Engineer and Surveyor of the State of York. The following deductions from the r of about sixty companies will be found int ing:—

	1866.	
Average number of miles traveled by each passenger	37.44	
Average number of passengers in each train	69.72	
Average number of miles each ton of freight was transported	113.95	
Average number of tons in each freight train	74.85	
Aggregate movement of passenger trains is equivalent to passing over the road	3,898 times	2,9
Aggregate movement of freight trains is equivalent to passing over the road	5,570 times	4,16
Average number of trains passing daily over the road, about	26	
Average cost, per mile of road, for maintaining roadway	$4,577 35	$
Average cost, per mile of road, for repairs of machinery	2,991 70	
Average cost, per mile of road, for operating road	6,287 24	
Average cost, per mile of single track, for maintaining roadway	2,789 82	
Average cost, per mile of single track, for repairs of machinery	1,823 40	
Average cost, per mile of single track, for operating road	3,832 04	
Average sum received for carrying one passenger one mile	2.42 cents	2 4
Average sum received for transporting one ton of freight one mile	2.853 cents	2.5
Average cost, per mile, for carrying each passenger	1.863 cents	1.
Average cost, per mile, for carrying each ton of freight	1.952 cents	1.5
Average number of miles of travel for each passenger killed	40,203,823	5(
Average number of miles of travel for each passenger either killed or injured	6,387,523	
Average number of passengers carried for each one killed	1,073,804	
Average expense per cent. of all the earnings	75.99	

Railway Accidents.—Statistics recent lished respecting English railways show the ing accidents to passengers in 1866: kille causes beyond their own contol, one i eighteen millions carried: injured, ditto, every half of a million carried; killed fro own misconduct or want of caution, one i seventeen millions; injured, ditto, one f thirty-nine millions.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Nov. 10, 1868.

The fall fleet has now pretty well all arrived, with perhaps some two or three exceptions, but the stocks of heavy goods, which we receive by the fall vessels, are now landed and the merchants are supplied with their winter stocks.

Our local markets are dull and the tendency is downwards; this is owing to a slight rise of water in the canals, which has made the supplies more liberal than for some little time past. I give the latest quotations for the leading articles: Extra $ to 6.65, fancy $5.50 to 5.65, strong supers. selling at $5.35 up to $5.55 for very strong bakers, sales being of 100 brl. lots; good supers. from Canada wheat $5,20 to 5.25. Sales of Welland Canal as it lies at $5.20. No. 2 super has sold at $5.20. Of oatmeal, a sale of good U. C. was made at $6.25 per brl. *Wheat*—Ranges still high, U. C. spring being nominally $1.19 to 1.20; U. C. red winter $1.20; Chicago spring No. 2 $1.12, and a sale of No. 3 at $1.05 ; but buyers and sellers are so apart in their views that quotations are quite nominal. Of coarse grains sales of *Peas* have been made at $1.05 to 1.06, but only in retail quantities. *Corn*—Has sold at 83c. to 84½c. *Barley* $1.10 to 1.20, and *Oats* 48c. to 50c. I should hardly say that the quantities offering and sold at these prices are no criterion.

IN PROVISIONS there is a lull. *Pork* both in the hog and barrelled is very dull. *Beef* has been very slack, and the English markets have offered no inducement for barrelled. *Butter*, as I have stated steadily, has been held for high prices, the temporary depression having given way to the real state of the country markets. Ordinary to fair lots have sold at 20½c to 21c for Eastern; Western 22c to 23c, and choice dairy very scarce at 23½c to 24c, and the Grocers willingly paying 25c for extra samples. *Cheese*—Is in fair shipping demand at 11 to 11½c. for good factory.

GROCERIES.—There are several considerable sales by auction announced for next week; these will be the closing ones of the season, and it is to be hoped will produce more activity than the last week had. It is generally presumed that stocks are not heavy in the west, and if so we may look for a good winter's trade. Everything will depend on the financial position of our Western customers; for all indications point to ease.

HARDWARE.—There is still an active business doing, and orders are coming forward freely. Stocks are much reduced especially bar and pig iron, and prices are very firm with, if anything, an upward tendency. I have no change to note in other articles, some of which range at lower rates than is remunerative, but with the present active demand and rapidly lessening stocks it may be expected that all descriptions of hardware will advance before the close of the navigation.

FUR TRADE.—A few words on this may be acceptable to your western readers. There is a steady demand for for local manufacture, which keeps up the price of Otter, Mink and Beaver. Shipping furs are dull. Buffalo robes moving off pretty well at somewhat near last year's prices.

Toronto Market

During the week trade has been pretty quiet, but a fair amount of general business is reported for the season.

DRY GOODS.—Goods are moving off steadily, there being a fair demand from country merchants for sorting up stocks. Travellers who have visited the towns to the east of this city say that country storekeepers have still pretty fully shelves, yet there are few complaints of dullness. On the whole the state of the country trade in that direction is pronounced quite satisfactory. There is a fair steady, demand for goods from dealers in the west, showing that the season's business is progressing satisfactorily in that quarter also. *Fancy Goods*—Orders from the country have been coming in steadily until within the past few days since when there has been some falling off owing probably to the state of the weather and the roads. Wool goods were sold pretty freely, such as Nubias, hoods, &c., but the stock is still well maintained. Indeed it may be said of every department of the dry goods business that stocks though reduced are well-assorted, showing that our importers have pretty well estimated the wants of the country in each particular line. While this is the case, there is no over stock in any department ; in this respect especially the fall trade this year compares favorably with last year. Montreal houses have in many instances, as we are informed, brought goods in excess of the demand that has been made upon them, so that some houses there will have to repeat the operation of last year and previous years, of carrying over winter stocks of inconvenient magnitude. *Payments*—there are some complaints of slowness on the part of country merchants just lately, from some cause. We give a statement showing the imports of dry goods at this port for the month of October :—

	1867.	1868.
Manufactures of woollens.....	$65,996	$54,523
do cottons.....	47,600	44,097
do silks & velvets	11,986	10,714
do furs	1,507	984
Wearing apparel.....	647	198
	$127,736	$110,516

GROCERIES—*Sugars*—are firm and have undergone a further advance of ¼ per cent on all grades of raw, and refiners have put up their prices in the same proportion. *Teas*—There is a good enquiry; some job lots selling at full prices. We note also some sales of low grade Greens for export to the United States. *Fish*—firm, with a little more offering, several cargoes of new herrings having arrived in Montreal during the week. *Fruit*—There is considerable enquiry for fruit this week but no change in prices as yet. Two fruit ships, one with a cargo of Valencia raisins and the other with an assortment, are daily expect to arrive, and the market is in suspense till they are heard from. Should they not come to hand soon firmer prices may be looked for. There is very little fine fruit to be had this year, the great bulk being inferior. The imports of leading groeeries at the port of Toronto for October were as follows :

	1867. quant.	1867. value.	1868. quant.	1868. value
Coffee, green, lbs.....	46961	$5750	34561	$4091
Tea, green and Japan, lbs....	161315	64111	61537	25405
Tea, black, lbs.....	....	....	9198	3272
Tobacco, manufactured, lbs...	5126	1392	3552	1143
Sugars " ..	538891	37236	440679	21053
Cane Juice " ..	42530	960	.....	....
Mace and Nutmegs " ..	2317	922	2919	777
Dried Fruits and Nuts " ..	....	16230	....	6489

BOOTS AND SHOES.—Manufacturers have still more orders on hand than they can supply, and prices are firm and unchanged.

GRAIN—*Wheat*—Receipts by cars 20.773 bush. and 32,686 bush. last week. The market is very dull, and there are few buyers. Cars of spring were offered at $1.10 to $1.11, and some small sales to local millers were reported at these prices. There is no enquiry for export. Midge proof is nominal at about the same prices. Fall is extremely dull, and may be quoted nominal at $1.10 to $1.20. *Barley*—Receipts by cars 5,034 bush. and 19,635 bush. last week. Shipments by water for the week ended with Saturday last, 20,720 bush. and 81,675 bush. the previous week. Total shipments by water since the commencement of the season, 616,443 bush. The following vessels cleared with barley during the week ; the schooner *St. Ann* with 7,225 bushels, the *Kate* with 5,629 bush. ; *Ontario*, with 2774 bush ; *Jessie Macdonald* with 5,092 bush. (and 3392 bush. of wheat) all for Oswego. The market has ruled dull and unsettled, closing nominal at $1.30. *Oats*—Receipts by car 6000 bush. and 3720 last week ; the market is dull at 50e to 51c. *Peas*—Receipts by cars 2400 bush. and 4160 bush. last week. There is little demand, and not much doing ; quotations nominal. *Rye*—Receipts for the week ended Saturday last by vessel 22,659 bush. all from local ports. Market dull at 85c.

FLOUR.—Receipts for the week 2320 bush. and 2400 bush. last week. The market is exceedingly dull, and tending lower. Superfine is now offered freely at $5.00, with some demand at $4.75 to 4.80 ; a sale occurred yesterday at $4.80. For other grades there is no demand, and no sales to report.

PROVISIONS—*Butter*—A large lot of tub sold a point west on the G. T. R. at 22½c. ; and the same price was offered for another lot at Peterboro and refused ; holders demand 23¼. *Dressed Hogs*—supply moderate, selling at $6.00 to 7.25. *Live Hogs*—There were some 700 to 800 bought in from the States, and will be packed here in bond for export to Europe. This is a new feature in the trade that we would be glad to see much extended. *Cheese*—offering at 11¼ to 1 1¾. *Mess Pork*—offering at $24.50 ; demand slack.

FREIGHTS—Rates by steamer to Montreal on flour 30c ; on wheat, 8c. ; barley to Oswego 3½c., to Erie 4c. ; Lumber to Oswego $1.75 per M feet ; coal Erie to Toronto $1.30 to 1.35, currency. Rates per Grand Trunk—Flour to Montreal, 35c ; bond meats to Liverpool per gross ton 67s.6d ; lard and butter 77s. ; Beef per ton 11s. ; pork per bbl 9s.

The Grain Trade.

We collect a few figures showing the movement in wheat and flour, and the stocks at different points. The receipts at New York for the week ended Nov. 6 were :

	1867 For the week.	1867 Since Jan. 1.	1868 For the week.	1868 Since Jan. 1.
Flour, brls.....	12 ,000	2,081,720	120,035	2,244,00
Wheat, bush...	1,122,200	7,425,740	821,120	9,545,765
Barley, bush...	218,880	882,580	345,545	1,989,45

The exports from New York to foreign ports were, since Jan. 1st:

	1867	1868.
Flour, brls.....	663,380	820,622
Wheat, bush.....	2,714,508	4,555,731
Barley, bush.....	886,833	90

The receipts of the same articles at five Western lake ports, Chicago, Milwaukee, Toledo, Detroit and Cleveland, for the week, and since January 1st, were:

	1867 For the week.	1867 Since Jan. 1.	1868 For the week.	1868 Since Jan. 1.
Flour, brls....	135,905	3,068,550	136,974	3,480,022
Wheat, bush...	1,428,570	24,800,188	1,591,585	27,449,954
Barley, bush...	73,592	2,652,680	137,607	2,351,930

The stocks in store at the following points, at the dates mentioned, were:

At New York

	Oct. 26, 1868.	Nov. 2, 1868.	Nov. 4, 1867.
Wheat, bush...	1,023,704	1,410,322	637,517
Barley, bush...	126,877	238,144	329,384
Oats, bush... ..	1,771,011	2,065,974	1,669,294
Peas, bush.....	65,333	95,177	7,114
Malt, bush.....	41,612	14,327	62,502

At Buffalo.

	Oct. 26, 1868.	Nov. 2, 1868.	Nov. 4, 1867.
Wheat, bush...	775,000	476,000	447,000
Oats, bush.....	1,000,000	500,000	216,000
Barley, bush...	90,000	73,000	170,000
Peas, bush.....	1,800	1,800	14,700

At Chicago.

Oct. 31.—Flour, 73,328 brls. ; wheat, 1,252,384 bushs. ; barley, 564,780 bushs. ; Rye 214,043 bushs.

At Milwaukee.

Oct. 31.—Wheat, 476,000 bushs., against 347,000 bushs. in store at same time in 1867.

Beet Root Sugar.

A Beet Root Sugar Manufactory is about to be established in Buena Vista County Town. The requisite machinery is to be brought from France at a cost of $100,000. Five thousand acres of land have been purchased on which to grow the Beets.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s circular, dated Georgetown, 8th October, 1868:

Breadstuffs.—Early in the fortnight the market was languid and sales were made at rates quoted in our last. A demand for export having sprung up, an advance of 50c. on Flour and Meal was established at which rates considerable business was done. The mail yesterday bringing advices of short shipments for this place, and low stocks in the Islands, holders are to-day firm ; and although we have not heard of any sales, yet we look for an advance in prices.

Provisions.—By the above vessels we have received 537 brls. Pork, Rump $24 prime Mess $22, Mess $27, clear Mess $29 ; 500 half brls. Beef $11. 50, 1500 Tins Lard $4 20, for New York $4 50, for Baltimore : 225 Boxes Cheese 18 cents ; 42 Tierces Hams 15 cents : 150 Firkins French Butter $18.

Rice.—The "Linecelles," with 9000 Bags has arrived from Calcutta ; as the stocks estimated at 60,000 Bags, are in the hands of no less than six houses, with the unusually dull market for the article, no advance in price can be obtained. The abundance of native provisions, still continues, and the sales of Rice for the fortnight have been on the smallest possible scale.

Oats, Bran, Corn, &c.—There has been some slight enquiry for Irish Oats, but prices are not remunerative. Canadian are almost unsaleable.

Sugars.—Almost every Estate in the Colony is fairly at work, the demand for America for good samples is steady at $6 to $6 10 for V.P., but as a rule the quality offering for sale is not up to the usual standard ; this is the more unaccountable as the juice is sweetening every day with such hot weather. American advices lead us to think that the demand for that country will be active the next few months ; very little doing in Muscavadoes, purchasers not fecling inclined to purchase at the limits of holders.

Molasses.—There have been but few transactions for Vacuum Pan and the sales have rarely exceeded 25 cts. Planters are unwilling to accept the low rates and are re-boiling to a great extent, if prices improve orders to a very large extent could be filled ; the demand for Muscavado has been good, and bright samples have commanded better rates than Vacuum Pan.

Transactions have taken place during the fortnight at the following rates :

Sugars (package included) sold by 100 lbs.

Dutch, 10 per cent. tare F.O.B. Muscavadocs, equal at No. 8 Dutch Standard $3.09 ₱ 100 lbs.	In hhds. of about 1800 lbs. each.
No. 10 do. $4.00 "	
" 12 do. $4.25 "	
Vacuum Pan No. 12 do. $5.50	
" " 14 do. 5.75	
" " 16 do. 6.00	
" " 18 do. 6.10	

Molasses (package included, sold by Imperial gallon.)

Muscovado, from 20 @ 26 cents, as to color and density	In puns of 100 gals.
Vacuum Pan from 20 @ 25 cents, as to color and density	
Rum (colored, package included, sold by Imperial gal. from 35 per cent, @ 38 overproof 38 @ 40 cents.	Ditto.
From 38 per cent. @ 40 overproof, 40 @ 42 cents.	

Halifax Market.

Breadstuffs.—Nov 3.—Flour.—The demand for flour during the past week has been quite brisk, but owing to the large supply there has been no advance in prices. Canada No. 1 ranges from $6.25 to $6.50. Strong Bakers $6.65 to $6.70. Extra Canada $7.50 to $8. Extra State still continues dull at $6 to $6.40, according to quality; No. 2 in good demand at $5 to $5.50. Cornmeal without change at $4.50 for kiln dried, and $4.40 for fresh ground. Oatmeal $7.70 to $7.80. Imports from January 1st to October 27th, 1867 and 1868:

	Bbls. Flour.	Bbls. Cornmeal.
1868.	152,507	42,545
1867.	162,699	30,766

Fish.—Codfish scarce and in good demand without change in price, at $4.15 to $4.25 for good large shore. Labrador $2.25 to $2.50. Bank and Bay none. Good hand cure Arichat Haddock $2 to $2.10; Eastern Shore $1.80 to $1.90; Western $1.60 to $1.65; Pollock $1.50. Herring in good demand at $5 for Labrador and $4.75 for shore. Mackerel scarce at $12.50 for No. 1, $11 for No. 2, and $6.75 to $7 for No. 3. Salmon $14 for No. 1, $12 for No. 2, and $9.50 for No. 3.

West India Produce.—Sugars and Molasses remain without change. Large lots are being shipped out of our market and must soon affect prices here. Porto Rico 6¼ to 6⅞c.; Barbadoes 5¾ to 5¾c.; Cuba 5½ to 5¾c. Centrifugal Cuba 6c., in bond. Rum scarce and in demand at 62c. for Demerara, and 51 to 52½c. for St. Jago.

Exports of Petroleum.

The following were the exports of petroleum from the United States to foreign countries, from January 1st to October 30:

From	1868.	1867.
Boston	2,100,610	1,710,412
Philadelphia	31,075,836	23,436,404

Total, gallons	83,779,268	52,679,068
Corresponding period 1866, gallons		52,782,617
Corresponding period 1865, gallons		18,618,693
		Barrels.
Receipts at New York, Jan. 1 to Oct. 30, 1868		807,000
Receipts at New York, Jan. 1 to Oct. 30, 1867		1,075,780

U. S. National Board of Underwriters.—The executive committee met in Chicago on the 22nd October. The following resolutions as to rates of premiums were passed:—

Resolved, That when undoubted evidence is received by the officers of the Executive Committee that the rates in any given locality are so high, low, or unequal in their operation, that no business can be secured by companies comprising this Board, it shall be their duty to send at the earliest moment, a proper committee to revise the rates, and that immediate notice shall be given to all companies belonging to this Board of any change therein; but rates so revised shall not be in effect until five days after publication and notification to such Board.

Resolved, That any agent of companies belonging to the National Board who does not adhere with all the companies which he represents to the rates established by authority of the committee, or who shall negotiate for or obtain elsewhere any insurance at less than tariff rates, shall not continue to represent any company of this Board.

The Committee on Form of Policies reported the following resolutions, which were adopted:—

Resolved, That our mercantile policies, as printed and ordinarily filled up, to wit: "On merchandise —their own or held by them in trust or on commission, or sold but not delivered," are intended to protect and do fully protect the interest of owners, of commission merchants and factors who have advanced on the goods to the entire value of the goods they have in charge, not exceeding the amount insured thereon.

Resolved, That when the party or parties insured have sold and delivered the goods, and thereby their responsibility for preservation of the goods has ceased, they cannot take the required oath of interest in the goods in case of a loss thereon, and consequently have no claim under the policy.

Resolved, That the requirement in the policy that conseut of the company in writing must be obtained before the interest ean pass to cover a party not originally insured is of sound, practical value; and we take warning to ourselves and give it to our brother underwriters of this and other cities that it is dangerous to use written words in our policies which might be construed into a waiver of vital printed "conditions."

Resolved, That claims for the loss of goods when it is truly set forth in the "proof of loss," that in the sale note or contract of sale there was in writing the following words, or others to the same effect:—"Deliverable at the option of the buyer at any time within —— days;" or if an order on the warehouse has been given and such order was made to read, "Deliver to A. B. & Co. (the purchasers), at any time within —— days," or words to that effect, the insurance companies members of the New York Board of Fire Underwriters, will recognize the assured in the policy named as the owner of the goods within and up to the time of such limitation, provided the number of days is fixed at the time of sale and the same written in the contract or order, and provided that the buyer shall not have presented his order and had the goods placed to his or other account in the store.

The Committee on Statistics presented the following report:

States.	Number of Co's.	Combined Capital.	Gross Income from Fire Insurance.	Expenses.	Losses.
New York	122	$34,551,185	$21,227,664	$7,019,727	$12,353,792
Mass.	13	4,000,000	1,837,417	497,484	882,517
Rhode Island	8	1,700,000	1,052,310	263,816	642,924
Connecticut	11	7,500,000	9,620,279	2,984,017	5,732,604
Pennsylvania	8	2,150,000	1,445,021	413,412	722,590
Maryland	2	450,000	279,307	72,315	168,810
Ohio	4	1,005,382	747,167	219,784	288,789
Illinois	2	750,000	406,063	110,438	214,096
California	3	2,550,000	894,601	145,959	413,936
Foreign Co's	3	4,007,050	2,088,702	508,437	1,076,449
Total	176	$68,663,617	$39,201,716	$12,236,293	$22,495,571

Steamer Grecian.—This steamer has been raised, and having transhipped her cargo, has gone to Montreal to go into dry dock.

—The Greenock *Advertiser* understands that Messrs. Allan, of Glasgow, have contracted with Messrs. Robert Steele & Company, for an iron screw steamer of about 3,000 tons, for their service between the Mersey and the St. Lawrence. She is to be a *fac simile* of the *Austrian*. Her engines of 300 horse-power, are to be supplied by Messrs. Rankin & Blackmore, Eagle Foundry.

—It is said that the National Steamship Company have made a proposal to the British Post Office Department to carry letters to America at a greatly reduced rate. Last year they were understood to have offered to carry letters to New York at a penny per ounce.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per sent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Company.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordiuary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the Northwestern States, and through to California.

ÆTNA
Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company.

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*.

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.

Accumulated Fund, $2,000,000. *Income,* $1,000,000

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers intending assurers the following reasons, amongst others for preferring it to other companies:

It is purely Mutual. It allows the Insured to travel and reside in any portion of the United States and Europe. It throws out almost all restriction on occupation from Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and all cash company. Its Dividends are declared annually and applied in reduction of Premium. Its Dividends in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for every year the policy has been in force. The number of Dividends will always equal the outstanding Notes. Its Policies losses promptly—during its existence never having contested a claim. It issues Policies for the benefit of married Women beyond the reach of their husband's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting*, as it always allows the assured to surrender his Policy, should he desire, the Company issuing a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceedingly low and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

Meetings.

THE GRAND TRUNK.

(Proceedings at the Annual Meeting Continued.)

The total average of the cost of wood to the G.T. was $2.57; to the Great Western, $2.54. But deducting the discount for greenbacks, 26 cents, showed that the comparison would be 19¼ cents, in favour of the G. T. He though peat, for many purposes a most admirable and useful fuel. Canada had not throughout its length and breadth an ounce of coal, and Mr. Hodges, the gentleman who built the Victoria bridge, and who had a large bog in Canada, thought that he would be doing a great thing for Canada if he could convert it into coal. He had patented machinery for that purpose, by which he was enabled to make a contract with the Grand Trunk Company to supply them at Montreal at the rate of $3.20, or 12s. 9d. per ton. Mr. Ritter's view was that that was an extravagant contract. He (the chairman) looked upon the supply of fuel in Canada not altogether as a question of price, but as a question of getting it. They had required some means of competition with the daily increase in price by the wood contractors, something to show that if they did not deal at their shop, there was another to which they could go. Having looked into the matter, he was convinced Mr. Brydges had tried his utmost, and obtained the best terms he possibly could, therefore he was to be praised rather than blamed. What was required was to encourage the production of a fuel to compete with wood, which could not be obtained by running down every man's price and refusing him a fair profit. It was not wise to deal in twopences, but it was wise to give a man that had a peat bog a fair price, to enable him to set up machinery and manufacture peat, in order to lower the price of fuel. Mr. Trevethick, who had been to Bavaria, the only place where peat was used for railways, had put the cost of it at from 10s. to 11s. per ton, whereas the Grand Trunk Company were paying 12s. 9d. But he had also said that the wages and labour to produce it were only 1s. 8d. per day in Bavaria, whereas the labour employed in Canada was a dollar a day, besides which, the peat in Canada was worth from 15 to 25 per cent. more than the peat in Bavaria. The experiments made by Mr. Trevethick showed that a ton of peat of 240 lbs. was equal to a cord of wood. With peat a train would run 328 miles—with wood, it would only run 35. The contract which had been made with Mr. Hodges was on sufferance, and it rested with them to terminate it when they pleased, but he thought it would be a great mistake if they did so. His official connection with the company would soon cease, and that his only connection in future would be as a holder of property, but he would be ever ready to give any gratuitous advice that the existing board may ask of him. A good deal had been said of his receiving £2,000 a year from the company for his services as chairman. Though he received that sum, it did not come out of the profits of the company. By the Consolidation Act of the company a certain sum was fixed for management. When he joined the board in 1862 he was requested to take the chair, and he was asked what remuneration he thought he should receive. His reply was that whatever sum he received he would not consent that the shareholders would have to pay anything additional to the charges laid down by the Act of Parliament on his account. He was at that time making £1,500 a year by his own business, and taking that into consideration and the fact also that as chairman of the company he should keep a house in London, it was decided that he should get £2,000 a year for his time and services. To make up the sum without adding to the charges laid down by the Act of Parliament, Mr. Baring, M. P., and Mr. Glyn, M. P., said that they would take no remuneration, and Mr. Potter, (another of the directors) suggested, and it was agreed to, that these three gentlemen would only take their remuneration nominally, and the whole of the three amounts should go towards making up the £2,000 which he had been in the habit of receiving as chairman. The shareholders would, therefore, see that he was not the cormorant that he was represented to have been.

Mr. K. D. Hodgson having seconded the motion for the adoption of the report—

Mr. Albert Creak said they must remember that the present Board were responsible for the present condition of the company. He looked upon Mr. Baring when he was chairman as the author of all their difficulties.

The Chairman explained the reason of Mr. Barings absence.

Mr. Creak—Though Mr. Baring was not absolutely at the head of the concern, yet they all looked upon him as its head, and accordingly treated him as responsible for its safe conduct and prosperity. Any statement brought forward with his name carried enormous weight in the city of London. The line was handed over to the directors by the contractors when it was in an unfinished condition, and now every half-year they had to pay for what to have been done at first. Mr. Baring may say that he trusted to the engineer to ascertain that the line was in a satisfactory state. He had nothing to do with that. He still looked to the board. He complained of the way in which it had been renewed; but Sir Edward Watkin said that the board had done they best that they could. They were told that rails did not last so long in Canada as in other parts of the world. But some rails had lasted in Canada for no less than twenty years, and still would last for five years longer. If bad rails had been laid down, who was to blame for it but the board? The directors told them that they were innocent, and that they had done the best in their power for the shareholders, and that they were the most immaculate board ever created. If they could not rely on the estimates sent out by the board, on what what were they to put their trust? In 1863 the directors had told them that a sum of £70,000 a year for five years would be required to pay for their renewals. Now, what were the facts! Instead of £350,000 being sufficient, £572,000 had been expended. The sum which had during this period been paid for renewals was more than 40 per cent. in excess of the estimated amount. They had spent thousands, and yet had left the line unballasted. They had the company without a single shilling in its locker, and where they were going to get a shilling at the present moment he did not know. They should have said to them, let the road be put in order, and have asked for

the bill. No doubt the American war, and especially the Reciprocity Treaty, had contributed to their difficulties, but not to the extent which the board represented they had. They had been told at their last meeting, "Only wait until October." Their chairman had pledged himself if their traffic was not largely increased and their expenditure greatly diminished that Mr. Brydges should resign. They were promised very large reductions in three great points, viz.: in wages, materials, and fuel. Mr. Creak went on to give figures showing that for a rise of 6 per cent. in the traffic there had been a rise of 6 per cent. in wages. If they were to pay thus for every increase in the traffic, what was the benefit of the increase? The cost of materials was reduced only 4 per cent., while the cost of fuel was £2,000 extra. This was not the amendment they were told to expect. He asked the board to fulfil their pledge, and withdraw Mr. Brydges from the management; and as that gentleman had come across the Atlantic to be present at that meeting, he would ask him a few questions. One was as to the condition of the road and what per centage was in good working order? What was the condition of the rolling stock, and what number of engines and cars were useless, and what was the number of the remainder? 90 of the 298 of their engines were in hospital, and a large number of their cars were useless. He would also ask Mr. Brydges what was the amount likely to be yet required to put the line in good order. He contended that no one should leave the room that day without they knew what they had yet to pay on this score. He had been told that £100,000 after this would do it; but he never had yet seen an estimate of the Grand Trunk verified. What was the number of free passes granted last year? how many of these passes were for officials, and how many were complimentary? How the loss arose on greenbacks? How was it, however, he would ask, that they could only get 35½ miles out of a cord of wood, when the Great Western of Canada could get 45½ miles? They paid as much for fuel in Canada as the London and North Western did in this country. How was it that while coal was 19s a ton in Quebec, that it would not be better than wood, as it was cheaper, as wood cost them 17s a cord. Mr. Yates was the engineer of the line for some time, but no one of them knew who were the engineers now. Now, when Mr. Yates came to this Company he had a patent, and he would ask Mr. Brydges if, while that gentleman was engineer, he had certified the work of which he got the business? Mr. Brydges himself admits that he was connected with the Kingston Locomotive Works, out of which several engines had been supplied to the Grand Trunk. He would ask Mr. Brydges whether he or any of the officials on the line were connected with any company who did work for the Grand Trunk, or to his knowledge any official had received commissions for work done?

Mr. Brydges said that he would state deliberately, as man to man ought to state, that there was not one single word of truth in the allegation, and he was not in any way connected with any company supplying materials to the Grand Trunk, with the exception of the Kingston Ironworks, nor to the best of his knowledge was any officer connected with the company, and that neither they nor he received commissions for any materials which had been supplied.

Mr. A. Creak said that he was very glad to have received that declaration from Mr. Brydges, and he did not think that gentleman would blame him for giving him an opportunity of distinctly stating the facts. The committee of which he had been chairman, had been called very hard names. It had been said that they had been overcome by the soft sawder and the blandishments of the chairman (Sir E. Watkin). They had, he assured them, done nothing of the kind, but they would carry out the wishes of the meeting that appointed them. The committee had been willing to agree to anything which would produce peace, and he was sorry that such a compromise had been agreed to. He had received, on Saturday last, by the latest post, a letter saying that two members of the shareholders' committee should be appointed to the board, and that two members of another committee should also be appointed—viz. Messrs. Fearon and Hodgkinson. He looked upon this as a departure from the understanding which had been arrived at with the board. He was no party to it, and he repudiated it. Mr. Fearon was not a holder of stock in this company, but merely represented another company who held a stake in the Grand Trunk. Both Mr. Ritter and himself held a moderate interest, about £35,000 or £40,000. He did not think that they ought to receive a nominee of another company. He was going to move an amendment to the effect that the report and accounts not being satisfactory, the directors be requested to resign, and that a committee be appointed to represent the board. If the board had not repudiated the arrangement that had been made he would not have taken the course which he now recommended. He believed that 600 proxies had been received in favour of a new board, and there was a large section of the proprietors determined for a change, and that change must and ought to come.

Mr. Hesseltine, in seconding the amendment of Mr. Creak, said that the remark of the chairman that his connection with the company would soon cease, removed all his objections to him. He had received the proxies of 598 proprietors, with a view of reorganizing the board. He would say to the proprietors and to the chairman, that the well-being of that company was the well-being of the Buffalo, and if he could see the interest on the Buffalo bonds paid, he would be satisfied. Sir Edward had said that he had received something from him in the shape of an apology. If he looked upon that in the light of an apology, he would let him do so. He was, however, sorry that he had used the strong statements that he had done. He was extremely sorry that he had gone the length that he had done. He hoped that the chairman would pass the question by and consider the difficulty with him settled. He also trusted that Sir Edward Watkin would consider this statement satisfactory. He begged to second Mr. Creak's motion.

Sir E. Watkin said that if Mr. Hesseltine meant that he was sorry for having charged him with doing that which, as an honorable man, he must have known him to be incapable of doing, he should be perfectly willing to accept the apology.

Mr. Hesseltine said that such was his intention.

Sir E. Watkin said that from that time bygones would be bygones.

Mr. Prance said it now devolved upon them to set about reforming their board. He did not wish to lose the services of the board as a body, as he should be sorry to see Messrs. Baring and Glyn unrepresented on the board, not only in the interests of the shareholders, but in the interests of the Canadian Government, as without the assistance of that Government he did not see how they were to pull together. They wished, if possible, to make the Canadian hopes and feelings identical with their own. Although he did not think that they had treated the Company well, or in a fair manner, yet he was anxious that they should do everything in their power to conciliate the Government of Canada. He would also wish to have the presence of Mr. K. Hodgson on the board, but thought they could dispense with the services of Mr. Brydges as a managing Director, because he was too ambitious to suit the Company.

Mr. Ritter was sorry that the chairman had alluded to the peat question, as it was not his own intention to have done so. He had gone very deeply into it, and he would give them the benefit of his labours. He had found that there was a large quantity of bog land along the line, and the sole reason which had induced him to largely increase his holding was, because he believed he could make every economy in the fuel question. That which had been referred to as a patent was no patent at all. He had proved to Sir E. Watkin that the machinery was twelve or fou years old, and that was the reason why he particularly insisted on the contract being p end to. The contract rate was about 13s. whereas, he maintained that peat could be easily by the Company at the rate of abo or 6s. That would not be a two-penny affa would involve a sum of about £40,000 or £ He would go further and say that a Compar the Grand Trunk, that could not pay its divi might have made great use of that pea might have supplied the various towns and along the line. He did not think it wa treated as a twopenny affair, because it wa to be anticipated that £1,400 a year con been realised. In Canada they could not w the year—they could not work in the wint so it would be some months before they cou ceed to work at this. There was another venience with reference to the contract, i never be executed. What they had been was half mud. They had been paying no 13s. 4d., but Mr. Trevethick had shown report that they were actually paying 18 Handyside had also gone out to Canada at expense, and had brought back a report t peat would come ultimately to 24s., and, that one cord of wood would go as far as of peat. It was a very painful thing to gentleman like Mr. Brydges with great but it appeared to him that information have been obtained in France, Bavaria a before the contract had been entered in Handyside had brought home documents, given a short report, and he would move Secretary of the Company he allowed t as the facts contained in it were most val

[The Secretary then read the repor Handyside.]

Mr. Brydges said that a distinct state been made that he and others connected Grand Trunk Company had entered i contract for the supply of wheels against rests of the Company. He begged ag allowed to state on his honour that the was an entire fabrication. The man that letter was a Mr. Scovill of Tor Scovill was a wheel manufacturer, and ago the Company bought wheels of him of the Three Rivers Company. In 186 Rivers Company failed, and so were make any more wheels for the Grand T moment that this happened, Mr. Scov Company notice that he would requi dollar for every wheel, supposing th have all the market to himself. But t proceeded to take some steps to pr competition, and so bring down the p went to Montreal and said that there in Toronto making wheels, but who wa price than they wished to give. On parties contracted to supply wheels at —a dollar and a half less than Sco force upon them, and that man dared ward and tried to accuse him of no duty to the Company.

To be Continued.

ERIE AND NIAGARA EXTENS WAY COMPANY.

At a meeting of the Provisional Di Company held at the Court House, on Tuesday, the 10th day of Nove the following were present:—Wm. Esq., President of the Erie and Nia Colin Munro, Esq., Sheriff of t Elgin; John Duck, Esq., Warden o of Kent; Thomas M. Nairn, Esq., County of Elgin; Richard Grahan Erie; John Smith, Esq., Tilsonburg; Esq., Colchester, County of Esse Farrel, Registrar of Haldimand. taken by Mr. Sheriff Munro, and M

l was appointed Secretary to the meeting. The owing resolutions were then passed :—
That Wm. A. Thompson be elected President; omas M. Nairn, Vice-President, and Nicol ingsmill be Secretary and Treasurer. That ck Books be immediately opened in accordance h the Act of Incorporation, and that the Sec- ry do advertise a meeting of the Directors to ive subscriptions of Stock, to be held at the e of the Company at Fort Erie, on the 16th ember, A. D. 1868. That application be le by this Board to the various municipalities nvested in the construction of the proposed ol, asking an appropriation of the right of way uch other aid to the undertaking as to them deem meet. That the Board having heard interesting statement made by Mr. Thompson his efforts and progress on behalf of this dertaking, tender to him their sincere thanks the same, and would express their confidence is energy and integrity carrying it to a suc- ful completion. That the Ontario Bank be gnated as the Bankers of the Company. Messrs. Crooks, Kingsmill and Cattanach be inted the Solicitors of the Company.
vote of thanks to Sheriff Munro was then d for his efficient conduct in the chair, and meeting was adjourned to Wednesday, the December, next, to meet at the office of the pany at Fort Erie.

E QUEBEC AND GOSFORD WOODEN RAILWAY.

meeting of the shareholders and others in- ed in the construction of this railway was in Quebec, for the purpose of hearing Mr. bert, an engineer from the United States. er Mr. Garneau had introduced Mr. Hulbert e meeting, the latter gentleman explained he had been engaged at Clifton in the con- tion of a wooden railway, which had turned n a pecuniary point of view, as a complete ss. and gave general satisfaction. They were ng four locomotives and 60 cars, and the ny now proposed to add four additional otives and 100 cars. He had passed over ad now under consideration with Mr. Fitz- , and had come to the conclusion that it be built much cheaper than the lines he had spoken of. He was surprised to hear that we ained about the cost of cordwood, with such quantities available within 25 miles of our It was impossible for him to give the meet- e exact figures of the cost of construction, thought it could it could be put in work- eration for about $200,000. These railways attain a speed of 16 miles in 60 minutes. ran at that rate in Clifton, but from 8 to 10 in the same time was sufficient for all prac- urposes. The locomotive on this line could two trips a-day, forty cords each load, which be, with four locomotives running, 540 each day. The width of way required was ft., much more, he believed, than at first con- ted by the shareholders—Mr. Hulbert then into detailed description of the grade which wooden railways can attain, which is as as 300 feet on the mile, and also upon the ed value of the property through which the ould pass. With fair usage, he thought a rail made of maple—for he found it the r the purpose—would last at least five years. hen one side of the rail was worn out, it be reversed. He here showed the meeting d diagram of a rail such as is used in wooden ys. The road as he proposed is 66 feet would not require cattle guards, and they lo away with fencing. He also stated n its construction, not one pound of iron be used. Mr. Fitzgerald here said that ood required for the rails could be obtained lands conceded by the Government. continued his explanations stating that been consulted by certain gentlemen in Ontario, who proposed building a similar road. These gentlemen had visited the road he had lately built, and expressed themselves highly satisfied. He thought for cheapness it was undoubtedly the best thing they could get up. It was also suggested as an encouragement to persons to buy stock, that each shareholder be entitled to a cord of wood for each share they held, at cost price. This idea appeared to meet with the general approval of the meeting. The next question taken up, in which nearly all the gentlemen present expressed their opinion, was the cost of labor. Mr. H. said that the ordinary unskilled laborer or navvy in the United States was paid $1.50 currency per day. Mr. Garneau was of opinion that unskilled labor here could be obtained for four shillings a day, and perhaps less. As the road had to be built in the summer season, labor would, of course, be higher. Mr. Henry Fry said that in the winter season they could obtain as much labor here as they required at their own price, for the people were going round the soup-kitchens for subsistence. Mr. Hulbert said in his experience he found that when there was a large demand for labor, the wages generally increased. After some further conversation upon the probable competition that would arise between the batteaux carrying wood from the lower St. Lawrence and the Gosford Road, the meeting adjourned for a few days, to allow Mr. Hulbert an opportunity to prepare certain plans and specifications, which would give them a more definite idea of the probable cost at which the road could be constructed.—*Chronicle.*

RAMA TIMBER TRANSPORTATION COMPANY.—A meeting of this company was held on the 17th inst., in the office of Messrs. Strong, Edgar and Grahame, Jordan street. The object of the company is to cut a canal for the floating of timber from the waters of the Black River, in the County of Ontario, to Lake St. John, and through to Lake Couchiching, so as to facilitate the transportation of timber from the extensive forests on the Black River. Heretofore it has been passed through the River Severn, Georgian Bay, and three of the great lakes with their connections, before arriving here. It will, after the completion of the canal, be brought down Lake Simcoe and shipped by the Northern Railway to Toronto. The whole of the stock, amounting to $40,000 has been subscribed, and $10,000 of it paid up. The following gentlemen were appointed directors for the ensuing year :—Messrs. F. W. Cumberland, M.P.P., H. W. Sage, Thompson Smith, John Thompson and Clarence Moberly.

ROSSIN HOUSE—The annual meeting of the Rossin House Company took place at that hotel on the 17th. The President, Mr. Gzowski occupied the chair. The annual report of the Directors was submitted to the meeting and showed the business of the past year to have been very satisfactory on the whole. The Directors thought that for several years to come the receipts from the renting of the stores in the building would likely be required to pay the principal and interest. In the report the Directors recommended the opening of the second flat. The following gentlemen were elected Directors for the coming year, viz:—Messrs. Jno. McDonald, W. C. Chewett, Adam Crooks, C. S. Gzowski, and B. Dickson. Mr. Gzowski was re-elected President, and Mr. W. C. Chewett managing director.

Mining.

GOLD MINING REVIEW.

NOVA SCOTIA.—The sale of two large properties in the eastern districts had taken place within the fortnight, but the enquiry for lands is declining, and for stock has almost ceased.

UNIACKE.—The Queen Company has sent up 114 ounces as the product of 36 tons.

ISAAC'S HARBOR.—The prospects of the north lode are very good. The mill, containing at present two 5-stamp batteries, has commenced running, and gives satisfaction.

The alleged alluvial discoveries were, as surmised, much exaggerated. It has long been known that pay dirt could be washed at Dunn Cove and Hurricane Point. Dunn Cove offers certain facilities for sluicing; but at neither are the deposits so rich or so extensive as to warrant even the least excitement, or to give them at present any marked superiority over other districts in the Province where alluvial washings have already been tried.

ECUM SECUM.—The mill of the Atlantic Co. will not be started until next week, owing to the delay in the receipt of some essential part of the machinery, which was before reported on the spot and complete. Mr. Andrews speaks encouragingly of the progress of the works and the general prospects of the company.

INDIAN PATH.—The mill of Messrs. Waddelow and MacDonald commenced running on the 26th October, and is said to work satisfactorily. It has at present two batteries, each of five stamps, but there is room for two more batteries if required. The stamps are driven by an 18 ft. overshot wheel. The supply of water is abundant and has a good fall. The shafts of this company are still sending up rich looking ore, and its quality will soon be tested *en gross*, as they have now about 500 tons on the surface, which will be put through the batteries so soon as the stamps have had proper play. Twenty-six men are now employed on these works.

THE OVENS.—The furnace of Captain Cornwall is being fast completed, and satisfactory progress is still reported of his works and those of Mr. Clarke. The two companies employ about 20 men.

MUSQUODOBOIT.—The following results are reported from Mr. Burkner from experimental crushings conducted by himself:

1450 lbs. quartz, from which half an ounce of specimens had been taken, gave in the battery 2 ozs. 7 dwts.

1000 lbs. from a three feet lode, half quartz and half slate, reduced in the stamp mill, yielded 4 dwts.

Mr. Tuoguoy, who has just returned from the district, has also brought specimens with him, visibly rich in gold.

The following quanties of bar gold have been reported in Halifax between 23rd October and 5th November:

Co.	District.	Oz.	dwts.	grs.
Ophir,	Renfrew,	172	11	0
.....	do.,	3	9	0
.....	do.,	1	11	0
Mulgrave,	Isaac's Harbor,	92	17	9
North American,	Waverley,	24	1	22
Macintosh,	Wine Harbor,	12	13	21
Queen,	Uniacke,	134	10	0
Caledonia,	Oldham,	34	6	0
North St. Lawrence,	Uniacke,	14	5	0

—*Halifax Mining Gazette.*

THE TAXES ON THE PRODUCTION OF THE PRECIOUS METALS IN MEXICO.

We have received a printed copy of the report submitted to the Mexican Congress in May last, recommending a reduction of the taxes on precious metals, and a perusal of the document fills us with astonishment that a Government can exist with taxes so oppressive, that the mining industry continues to support a large porportion of the population, and the mines should be found to produce $20,000,000 annually (the manifested exportation is $15,000,000) with a considerable profit, after submitting to such terrible exactions. The taxes

amount to 24,.66 per cent. or nearly one-fourth of the total production.

The Committee suppose that a miner takes from his mill a bar containing 1,009 marcs of silver worth $9,416.36. He must pay on this $270, or 3 per cent. of the tax called the quinto; $135, or 1½ of the minería; $22.50, or ¼ for assay; $22.50, or ¼ for State tax; 1½c. for additional tax; $461.85, more than 5 per cent., for coining; 2½ per cent. for circulation, and 7½ per cent. for exportation; so that of the $9,415.36 with which he started, he pay ont $1,863.45 of tax, and has $7,551.91 left for himself. The charge for coining is ostensibly less than 5 per cent., but the law allows a certain variation from the standard coins in fineness and weight, and this variation is managed to the loss of the miner, who gets only so much as the Mint officers are compelled to deliver to him. Two and a half per cent. have been taken off since this report was made, but 22 per cent. still remain, and the Committee recommend the entire abolition of all taxes on the precious metals. The adoption of their recommendation would prove the wisest official act in the history of Mexico. The ores must be very rich, or the cost of extraction very small, to permit any productions under such burthens. The imposition of such a tax in California and Nevada would reduce the annual productions of these two States from $50,000,000 to $10,000,000, or less. The mines of note which produce more than 20 per cent. net in this State can be counted up on the fingers, and yet our mines are regarded as the richest in the world.

The report estimates the annual production of the mines at $20,000,000, and says this amount is extracted from 600,000 tons of selected ore, picked from 5,000,000 tons of vein-stone, making an average of $33 to the ton of selected ore, and 4 to the ton of vein-stone broken down in the mine. At the Valenciana mine 3,100 laborers were at one time employed, and at the Proano 3,400, in extraction and the work directly or indirectly connected therewith, leaving the amalgamators and packers out of the count. At Fresnillo while the Proano mine was most productive, the richest ore yielded five times as much to the ton as the poorest; but the poorest was so much more abundant that its total production was seven times as great as that of the richest. The average yield of Proano was thirty-one ounces per ton in 1836, and only nine and a half ounces in 1862; and of Real del Monte forty-nine ounces in 1843 and twenty-nine ounces in 1852. At Proano the extraction cost $45 and the reduction 31 65 per ton in 1836, and in 1858 the expense had been reduced to $10 85 for extraction, and 11 17 for reduction.

Plumbago in St. John.—A plumbago mine is worked at St. John, the product of which is sent to New York, prepared by a simple process and returned in the manufactured state. Already 2,000 barrels of 300 pounds each have been raised. Another mine is to be sunk shortly beside it.

Insurance.

Fire Record.—Galt, Nov. 9.—Barn of James Casey; insured in the Waterloo Matual.

Wingram Township, near Galt, Ont., Oct. 30.—Building of Thos. Agnew and contents; loss estimated at $2,500; insured in the Provincial for $1,500; also Thos. Birkeley's building adjacent; contents saved; loss $800; no insurance.

Stratford, Nov. 6.—Stable of A. Smith and one horse; no insurance; fire thought to be incendiary.

Bowmanville, Nov. 17.—The worst fire that has occurred in Bowmanville for many years took place last night. It was evident at once that the whole block would go. This consisted of McClung's dry goods and grocery store; McArthur's dry goods, and Murdoch's grocery, being four large and commodious brick stores. Most unfortunately our fire engine was comparatively useless, owing to the bursting of the hose. Great exertions were made by the inhabitants to get the goods removed; this was done in the case of McArthur and Murdoch systematically, much of their stock being got out in good order. It was feared at one time that the whole street west would go, but the next building to Murdoch's was a small frame one, and this circumstance enabled them to keep the fire in check. All the parties who were burned out have got places to go into. McClung's stores are insured for $4,500, the stock for $18,000; McArthur's store insured for $3,000; stock fully; Murdoch's store $2,500, stock fully.

Grantham, Ont.—House and barn of McGuire, with all his season's crops; no insurance.

Marine Losses.—The amount of property lost to shipping interests on the Canadian coasts of Lakes Erie and Huron for the past ten years is upwards of $2,251,364, besides a vast number of lives. A good harbor of refuge on each of those lakes, according to the above figures, is much needed.

Port Stanley, Nov. 11.—The propeller *East*, on attempting to enter the harbor this morning, struck the bar and drifted off to the east of the pier, where she now lies hard aground in a hopeless condition, and unless assistance is sent to her she is in danger of becoming a wreck.

— The *Frances Smith* got aground in the river on Saturday evening, and remained fast until noon on Sunday, when she reached her wharf. Again, on Monday evening, while endeavoring to pass the *Acadia* at the month of the river, she got aground and was obliged to remain in that position till morning.

Marine Business.—The statements of 16 Boston Marine Companies for 1866 and 1867, show a net loss over premiums of 20 per cent.

Municipal Insurance.—The new project of Municipal Insurance is one of the principal topics of talk at Hamilton at present. Its advocates say that no City in Canada is as safe against large fires (within the limits of the water supply) as Hamilton is, and that the Insurance Companies, are drawing large sums annually for a supposed risk, which is next to no risk at all. They contrast Hamilton in this respect with London, Brantford, and other places and affirm that Hamilton does not receive from the insurance companies, anything like a fair reduction on rates paid, according to decreased risk. We are paying a heavy annual charge, say they for the cost of the water works, and why not realize all the benefit therefrom that we may. It is conceded that only by some altogether extraordinary combination of circumstances can a fire now spread beyond the building it originates in. Meantime, conjectures—very far apart, indeed—are hazarded as to the probable amount paid annually in insurance premiums. Some say it cannot be over $25,000 per annum, while others think $100,000 nearer the correct figure.—*Globe Cor.*

Sensible.—We learn that a Committee of citizens of New Haven have been appointed to investigate the cause of fires. This committee is now examining the heating apparatus, flues, &c., of buildings.—*N. E. Insurance Gazette.*

WHAT LIFE INSURANCE IS AND DOES.

Life insurance is a method of becoming instantaneously wealthy, as to one of the noblest purposes of wealth.

He whose labor supports himself and others in comfort may feel poor—and that is almost as bad as to be poor—in his dread of the poverty which would overtake those he loves, were he to die suddenly.

Here are one hundred healthy, active men, with pleasant homes and happy families. It is almost certain that one of them—no one can tell which—will die this very year. And yet not one of the can die without leaving his family straightened f the means of a desirable life, if not destitu Hence every one of them feels poor, and longs be suddenly better off. Oh, for a lucky lott ticket, a lucky idea to be patented, the death of rich uncle reminiscent in his will, or some oth supernatural windfall to put one in possession o fund of at least two or three thousand dollar *Life Insurance* steps in, and, with a stroke of pen, converts those one hundred poor men into hundred rich ones—rich, every one them; short, if he should die before to-morrow, he wo leave enough to do perhaps all that money can to prolong the happiness of his family—rich, t without being dependent.

If one was to die this year, it is plain enough has bought this wealth cheap.

If he is to live a long life, it is worth all it c to feel so rich all the while.

The value of human life, we all understand, not to be measured by money. The end is no be replaced by the means. Yet the end can exist without the means. Therefore, the end c not be honored without honoring the means, or complished without considering the means.

A true life is not ended by death. That lif in fact, too mean to live, which does not live and in those that live after it.

There are cases enough of a sort of savagism civilization, where the individual amasses, posely or otherwise, for those who are to live him, the means of living, with little or no re to their existent life. Wife, children, depend of all sorts, as to their present life, are left t half starved, mentally if not physically, pin in character and humanity, in order that a gre tate may be left when the husband and father This case may get along without life insur The premature death of such a man can hard considered a loss to his heirs, so great is the p bility that wealth left to heirs unqualified t it would prove a curse.

A wiser style of man does not thus mistak means for the end. He aims to create char secure future by present happiness, and leav heirs, at all events, rich in themselves and memories of him. But in doing this, in pe nine cases out of ten in America, he must fearful risk, which life insurance, and that can take off his hands. Life insurance, in slays the lion in his path of well and liberal He may be sure now that a good part money-value of his life, as well as that wh immeasurable in money, will live after him.

In point of fact, the life insurance compa the United States last year distributed to th of the deceased, on about 3,000 policies, the $8,000,000. On very few of these could t miums received by the company have amou one-tenth of the sum received from it. B benefit, vast as it is, can be considered only part of that which results from life ins The surviving 297,000 policy-holders, it is be forgotten, have all enjoyed the satisfa feeling that, by their own prudence and self the welfare of their families is provided for, fatal dart strike when it will.

How far this satisfaction goes to account demonstrated fact that insured lives do no fast as the mortality tables lead us to exp impossible to say, but so far as it does go, li rance really insures life beyond the pecuniar

No matter, if a man's ancestral tree we up of Methuselahs, inasmuch as being a s two too slow in crossing the street, or so of that sort, *might* terminate his earth tence, a policy, while he lives, must be received, day by day and hour by hour—c when he lays his head on his pillow, an morning, when he wishes his darlings goo *Elixir Wright.*

—A Company is to be organized with capital to work the Joliette gold mine, north of Montreal, owned by Mr. Dupries gave from $8.41 to $31.75 to the ton.

Railway News.

NORTHERN RAILWAY.—Traffic receipts for week ending Nov. 7, 1868.

Passengers	$3,434 36
Freight	6,976 76
Mails and Sundries	316 95
Total Receipts for week	$10,728 07
Corresponding week 1867	10,973 32
Decrease	$245 25
Total traffic from 1 Jan. '68	$215,143 07
Corresponding period '67	237,281 80
	$22,138 73

GREAT WESTERN RAILWAY.—Traffic for week ending Oct. 30, 1868.

Passengers	$33,928 18
Freight and live stock	42,272 70
Mails and sundries	2,537 26
	$78,738 14
Corresponding Week of '67.	83,312 11
Increase	$4,573 97

WOODEN RAILWAYS.—Sherbrooke has expressed its willingness to subscribe $25,000 to the proposed wooden railway, should it start from that town.

QUEBEC AND GOSFORD RAILWAY.—By an order in Council, dated 7th October, the Local Government have granted the Quebec and Gosford Railway Company 61 lots of land, constituting an aggregate of 12,141 acres, at the rate of 30 cents per acre, payable when the road is built, and before it goes into operation. This substantial advantage will tell most favorably upon the prospects of the undertaking. It is satisfactory to know that the authorities consider the railway entitled to encouragement, for this among other reasons—that one of its objects is the supply of Quebec with firewood. Should the line not be put in operation before the first of January, 1872, the above land will revert to the Government without indemnity. The Company is empowered to take all the land wanted for the construction of the road off these lots.

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Nov. 17, 1868.

I have still to notice a plethora of money and a great difficulty in disposing of it, especially on short dated investments; the amount of paper offering is very light, and is readily taken up at very easy rates. Bank stocks are so high that capitalists do not care about investing any heavy amount, not knowing what some mercantile or political change may produce; the consequence is, the constant question is asked—*How can I invest my money?* The answer is difficult. Mortgages and the substantial style of security are eagerly taken up at rates, which a few years ago would have been considered absurd, namely, 7 and 8 per cent, whereas the general price for a mortgage on real estate used to be 10 to 12 per cent; but capitalists must accommodate their ideas the modern charges. Bank stocks and Government debentures offer a small field, but the rates are so high that the interest does not come up to the mark. In fact, every *kind of acknowledged stock* stands above its fair value. The only solution therefore to the problem is, Does Canada contain sources of wealth, as yet either undeveloped or only partially so? Undoubtedly *she does*. In her vast agricultural, mineral and manufacturing resources there are elements which only require fostering to give rise to a prosperity which will quickly absorb all our surplus capital. This is rather too large a field to open upon in this letter, but I may revert to it more fully in a future communication. The prices of Bank stocks and other securities show the state of our market.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The Market has been rather freer this week, but the demand for securities still greatly exceeds the supply, and nearly all stocks show a further advance.

Bank Stock.—There were sales of Montreal at 140½, 141 and 141½; holders now ask 142½. Buyers offer 104 for British; none in market. The last sales of Ontario were made at 104; buyers offer par ex dividend. No Toronto in market; there are buyers at 119 to 119½. Royal Canadian sold at 91½, and may still be had at that rate. Very little Commerce in market; small sales occurred at 105½. There are buyers of Gore at 40, and sellers at 41. Merchants' closed firm at 109½ to 110. For Quebec 101 is offered; none in market. Molson's is asked for at 107, but there are no sellers. Holders ask an advance on city; buyers offer 105. Sales of Du Peuple occurred at 105½, at which rate there are still buyers. Jaeques Cartier is held at 110, with buyers at 109. For Mechanics' 95½ is offered; no sellers. Union is held at 105, with buyers at 103½.

Debentures.—Canada are in great demand, but none of any kind offering. There were considerable sales of Toronto at rates to pay 7 per cent. interest. County in demand; none in market.

Sundries.—City Gas is not to be had, though buyers offer an advance. Canada Permanent Building Society is in demand and valued at 123, but higher would be paid. No Western Canada in market, buyers offer 115½; there were considerable sales of Freehold at 107½ to 108; books now closed. Montreal Telegraph is readily saleable at 130. There were several sales of Canada Landed Credit at 72 to 73, at which figures there are still buyers. A few large mortgages were placed at 8 per cent, but buyers are not willing now to pay more than 7¾ interest on first-class mortgages. Money is abundant on good security.

BANK OF FRANCE.

Stock of Bullion, October 22nd, 1868	£48,903,568
" September 17th, 1868	51,959,542
Rate of Discount	2½ per cent.

BANK OF ENGLAND.

The returns for the week ending October 28th, give the following results when compared with last month's return:

Rest	£3,091,978
Decrease	538,260
Public Deposits	4,129,038
Decrease	1,065,801
Other Deposits	19,919,524
Increase	719,344
On the other side of the account:—	
Government Securities	£15,985,874
Increase	1,195,743
Other Securities	15,705,432
Decrease	293,263
Notes unemployed	9,574,350
Decrease	1,623,135

The amount of notes in circulation is £24,175,880, showing an increase of £605,535, and the stock of bullion in both departments is £19,844,861, being a decrease of £1,119,979 when compared with the preceding return.

Rate of Discount 2 per cent.

MONTREAL, 17 Nov.—(Our own correspondent writes)—Since my last have nothing to report of any consequence. Some few trifling fires; but nothing sufficient to disturb the rest of our fire marshals, who, doubtless, will be more troubled at the sudden and unexpected return from Chicago of Mr. Perry, than at any fire.

THE COTTON MARKET.

We have had a falling market this week, and yet under the circumstances it has really exhibited considerable strength. Prices at Liverpool have been drooping, receipts at our ports have continued large, more favorable estimates of the crop are becoming general, and the money market, though at the close easier, yet is feverish and sensitive; still, in spite of all these adverse influences, prices this afternoon are only about one cent off from last week. Great confidence still arises from the condition of the stocks in Europe and the continued high rate of consumption there. Our cable despatches to-day give the week's consumption and export at Liverpool at 56,000 bales, and the total stock at 405,000 bales, of which 44,000 bales are American, with 291,000 bales afloat, of which 55,000 bales are American. These figures (although for the week the consumption has fallen off, probably through the use of Egyptian or Brazilian cotton) show that the immediate future is the critical point in the market, and it is believed by many that either short time must be resorted to at Manchester, or the amount afloat for Liverpool from this side must be rapidly increased if we are to see much lower prices. On the other hand, we cannot lose sight of the fact that the stock of American has decreased only very slightly this week, and that in the present state of our money market advances upon cotton are difficult to be made, and should the amount afloat for Liverpool increase materially, the sales there to arrive will have an adverse influence on present rates. Besides it is claimed that Manchester is now producing goods at a loss, and as it is becoming evident that our crop is a good one, small stocks at Liverpool during the next two months would not be likely to create uneasiness. We give these opposing views of the market that our readers may judge for themselves as to the probabilities of the future. The sales for forward delivery still indicate confidence in the maintenance of high rates. During the week the transactions of this description have been numerous. On last Saturday we note sales of 100 bales Middlings for January, and 100 bales for February at 23½c; on Monday, 200 bales for December at the same figure; on Tuesday, 500 bales for January and February at the same price; on Wednesday, 200 bales for January and February, and 100 bales for February at 23c, also 100 bales for December and 150 bales for January at 22 5-8c. To-day 400 bales are reported, of which 100 bales for January and the same for December were on private terms, 100 bales for December were at 22½c, and 100 bales for December and January at 22 5-8, all Middlings.—*N. Y. Financial Chronicle.*

THURSDAY, NOVEMBER 19, 1868.

LIFE ASSURANCE.

An article on "Life Assurance in the United States," appeared in the *Globe* of Saturday last, which, professing to be a review of the last report made by Mr. Sandford, the Massachusetts Insurance Commissioner, with malicious obliqueness strikes at all American Life Companies. In the course of the article the outrageous statement is made, that in the 46 Companies under review the average of deaths amongst new assurances taken out during the past year, 1867, [was 23 per cent. upon the sum assured. Our cotemporary has probably not had so much experience in Life Insurance matters as was desirable before putting its ideas upon paper, otherwise it would not have been guilty of the absurdity of writing about an average of "*deaths* upon *sums* assured," or of the ridiculous blunder of stating such average as 23 per cent., or nearly one death to every four assurances. What it intended to say was that the average of *death claims* was 23-100ths of one per cent upon the sums assured. This would give $1 loss for every $435 insured. During the same time the per centage of deaths among the new assurances was 21-100th of one per cent., or about one in every 476 assurances. Our contemporary further says, it has seen "similar returns in reference to one of the Life Companies of this country," and finds "that during the last 20 years there were 16 in which it never lost a life taken during the financial year's currency." In view of the above figures and in the absence of any particulars respecting this, "one of the Life Companies of this country," we see nothing wonderful in this fact. At the above mentioned ratio, a Company effecting 47 new insurances a year would run an even chance of not suffering a loss of this description for ten years, twice as good a per centage as that of "one of the Life Companies of this country," which, according to the figures in the *Globe*, undergoes such a loss in four years out of every twenty.

In truth, however, the only thing which gives figures of this kind any worth at all, is a comparison of them with those of other years, and as those above given are for one year only, they are, for that reason, quite valueless. As our contemporary appears to stand in need of some enlightenment on this subject, we give for its edification the following figures, which will enable it to arrive at a conclusion in respect to the care exercised by American Companies in the selection of lives, somewhat different from, and nearer the truth, than the one indicated in its article :—

Table showing the amount of Policies in force and the Losses of Companies doing business in the State of New York, from the year 1859 *to* 1867, *inclusive.*

Year.	Amount of Policies in force.	Losses.	Per centage of Losses to Amount in force.
1859	$141,497,977	$1,388,170	·9811
1860	163,703,455	1,438,578	·8787
1861	164,256,052	1,535,791	·9350
1862	183,962,577	1,740,294	·9460
1863	267,658,677	2,490,617	·9305
1864	395,603,054	3,266,724	·8255
1865	580,882,253	4,304,017	·7409
1866	865,105,877	6,423,668	·7425
1867	1,161,729,776	8,241,582	·7094

So that, on the whole, the per centage of loss has decreased from ·9811, in 1859, to ·7094, in 1867. This scarcely shows a decrease of care in the selection of lives. We commend these figures to the intelligence of the would-be actuary of the *Globe*, and, in conclusion, recommend that paper to stick to its proper business of abusing politicians of the opposite party, and not to meddle with matters which it does not understand. *Ne sutor ultra crepidam.*

THE DOMINION TELEGRAPH COMPANY.

When it was announced that a Telegraph Company was being organised to compete with the Company now in possession of the field, we expressed satisfaction that a hope was afforded of a reduction in rates of telegraphing, and of the enjoyment of all those advantages which the public derive from a wholesome rivalry for their patronage. We believe that an opposition Telegraph Company, with properly constructed lines, capital not inflated by contractor's profits and managed by men of character who hav a practical knowledge of the business, can b made to pay, not enormous profits, but fa dividends to shareholders. Several attemp have been made to establish competing lin in Canada, but so far they have been failure and it is because we would be glad to s successful competition that we are dispos to view with favor new enterprises havi that object before them. Competition in t business of telegraphy signifies, so far Canada is concerned, competition in fullest sense. The Montreal Company beyond doubt a strong one. The Direct are men of wealth, and business shrewdn with a sufficient interest in the Company indnce them to look well after its affai The business of the Company, and it is o just to say it, is managed by able and pr tical men, who have not only the confide of the directors, but also of the public. Th facilities are extensive and means ample, a thus far their Company have gobbled rivals, and found them very small mouthfu All this must be taken into account w competition is talked of, and a successful c petitor must start from a solid foundati But there is no reason why a rival Comp should not be managed just as well as Montreal Company is; no reason wh should not command its share of patrona no reason why it could not be worked to and no reason why such a Company sh not have its head quarters at Toronto. before satisfactory results can be obtai certain conditions must be complied v and the ordinary chances of success must be overlooked.

A Montreal paper has atacked with siderable vigour the promoters of the Do ion Telegraph Company, and after recou the story of the Grand Trunk Telegraph pany, of unhappy memory, charges tha Dominion Company has as its originato Snow of sixteen years ago; it gives Mr. the about-to-be Superintendent, a cha which, if inuendo can be regarded, least indifferent and ferrets out a relatio between Snow and the Messrs. R Josiah T. Snow, did certainly victimi Canadians, in the matter of the Trunk abortion, and no Canadian, we would feel anxions to assist him in rep his attempt to build a telegraph line territory.

The question, then, presents itself f tlement at the outset of this enterpris there a nigger in the fence," (to use a classic across the lines); and is Jos Snow that troublesome customer. T tory of Josiah is thus epitomized :—

Mr. Snow came into Canada from the States, representing himself as an extensive Telegraph Contractor, &c. He succeeded in getting some most respectable business men Toronto and other towns to permit the use their names as Directors. Having succeeded in this, he and his agents went about country, holding meetings, and parading names, and getting stock taken very extensively for his lines. Directorships without number were urged upon prominent men in different places, many of whom found their names on the list without their authority, and, on the strength of which names, many people were induced to subscribe. He held meetings all through the country, telling the people that it was a most favorable time for establishing a new Telegraph Company; that the business was merely in its infancy; that the profits were immense, and that there was room for two Companies: Assessments were to be very light, &c., &c. The stockholders being very numerous, and scarcely any holding enough stock to take an active interest in the affairs of the Company, they all taking for granted that the *very respectable Directors* or *somebody* was looking after the management in a proper manner, a thousand miles or more of lines were hastily built, and Mr. Snow, who manipulated the whole business, then went about, gathered in the balance of his subscriptions, and *immediately returned to the States.* The lines soon went into a state of premature decay, and the business seemed likely to come to an end altogether. An attempt, however, was made to revive the concern. A number of "*trustees*" were appointed, and funds borrowed to start again under a new management. The lines worked on for a year or so longer, and again got into a state of chronic decay, and were sold out to Mr. Wm. Weller, of Cobourg. After endeavoring with his own means and energy to carry on the business it soon again failed, and the old material of the line was finally sold for a mere nominal sum. Snow, it was reported, made $100,000 out of the operation, but not a single one of the original shareholders ever got back a cent of their money in any shape."

We do not vouch for the accuracy of this somewhat eventful history, but of Snow's return to the States, and of the death and burial of the Company, we are certain. The evidence against Snow thus proceeds. The Dominion Company calls the Great Western Telegraph Company of Chicago its "right bower." Snow is secretary and director to the Great Western Company. In the Western circular his name appears; in that circular as reprinted in Canada Mr. Shorne is kept out. This, however, is merely suspicious. The next charge is that Mr. Reeve is secretary of the Dominion Company, is a friend of Snow's. This, too, we consider very suspicious. The next charge is that Snow is working up a similar speculation in the States, in connection with the Dominion Company. This may be quite true, and yet Snow may not be directly interested on this account.

It appears that the Montreal Telegraph Company and Mr. Snow had some communication so late as last spring. It is stated by Mr Dwight, the Toronto manager of the Montreal Company, that overtures were made to his Company by Mr. Snow, with the object of arriving at a mutual agreement "that neither company should reduce rates." This mysterious appearance of Snow had a mysterious opportuneness about it. The Dominion is started here with the proclaimed object of reducing rates, and if it can be proved that its promoters first tried to fasten high rates on our people by a preconcerted arrangement with a company which it proposes to compete with, we can can only say that deception at the outset augurs a bad ending.

As we have said, we are by no means disposed to take as proved all the allegations alluded to; and we should be loth to injure an enterprise by condemning it without a full examination of the evidence on both sides. So far a strong *prima facie* case of suspicion is made out, and before the public can be reasonably called upon to further or take stock in the Dominion Company it should and must clear itself. The names on the board of direction are of the highest character, and we call on the board to come forward and let us know what the true state of the case really is. Did those gentlemen whose names appear there accept gifts of stock, or are they *bona fide* subscribers to the concern? Did they examine into the enterprise or take every statement for granted? Has Snow anything to do with them? Who obtained the contract for building the road? What prices are to be paid for doing it? No object is to be gained by concealment. Questions such as those we have put are in everybody's mouth, and the sooner they are answered the better for the reputation of those who lent the enterprise the use of their names, and the better for the Dominion Telegraph Company. We have already heard of parties who talk not only of declining to pay future instalments on this stock, but also of demanding back what they have paid, simply because they consider that the statements made, under which they were induced to subscribe, overshot the bounds of truth.

THE NARROW GAUGE RAILWAYS.

It is indisputably desirable that the districts lying to the north-east and north-west of Toronto should have railway service connecting them with this city. There is direct mutuality between the city and the country in this matter, and as the advantage is alike to both, it is reasonable that both should contribute in the measure of their ability and interest. The townships interested have already, to a considerable extent, pledged their means in support, and the city of Toronto is now invited to adopt by-laws authorizing aid to these lines to the amount of $400,000. The aggregate of bonuses for the first division of each of the projected railways is $5,000 per mile, in sums of from $20,000 to $60,000. The time seems, therefore, to have arrived when we should take a careful survey of the situation in order to ensure the fullest success at the least possible cost, and to the avoidance of those errors which, in past times, have overclouded promising enterprises by the rashness, imprudence, and corruption by which they were promoted.

The Toronto, Grey and Bruce Railway has three divisions. The first division starts from Toronto on a right of way reserved by the city for railway purposes, runs along the bank of the Humber for a short distance, thence north-west *viâ* Caledon East and Charleston to Orangeville, thence in a westerly direction to some point in Arthur, and thence to Mount Forest. The second division embraces a line through Bruce to Southampton, and a branch from Mount Forest to Owen Sound. The whole length of railway will be about 300 miles; the first division being 85 to 90 miles long. The territory to be served is estimated at 435,000 square miles of the richest and most fertile lands in Canada, leaving a corresponding extent of country tributable to the other railroads. The trade immediately available is estimated as equal to that done by the Northern, for although the Northern does a very large export business in pine lumber and timber, which would not be expected by this railroad, yet the import traffic of pine lumber, and the export of square timber and staves, together with a much larger cattle, grain, provision, produce and passenger traffic, should make the total business exceed that of the Northern so soon as the trade shall have adopted this new channel of communication.

The route of the Toronto and Nipissing Railway is in a direct north-easterly course from the city of Toronto, through Scarboro, Markham, Uxbridge, Brock and Eldon to a point on the Gull River, at or near Coboconck, thence northerly to a point on Lako Nipissing. The first division of the road extends about 100 miles, and is all that the Company undertakes to build on its own responsibility, according to present arrangements. The remaining 150 miles of road would be through new and unsettled country, and it is not contemplated to build it without a Government subsidy, either of land or money.

The grain and passenger traffic to be secured by this road to Lake Nipissing will not, it is considered, exceed half that of the Northern, but the practically inexhaustible

supplies of pine and other kinds of timber will afford a business durable and profitable. Unlike the railroads now in operation, the Toronto and Nipissing cannot expect to share in the North-west lake trade, but this disadvantage is compensated for by the lumber trade, which the latter will have control of in the absence of competition. A Government grant should and will, undoubtedly, be forthcoming when the road reaches the boundary of Eldon. A grant of alternate lots of 200 acres each would be sufficient to sell the bonds of the Company at par, so that with the proceeds the railroad could be built, within three or four years, to the shores of Lake Nipissing.

There are two principles involved in the scheme for the construction of these railways, which are somewhat novel in Canada. The first is that the gauge is limited to 3 feet 6 inches, such as has been worked in Norway, which is alleged to have a carrying capacity of over 800,000 tons per annum, and a speed of 20 to 30 miles per hour. The highest traffic returns of the Northern give a total of 200,000 tons, thus apparently showing that both the capacity and speed of the 3 ft. 6 in. gauge are ample for the local Canadian business likely to be secured. The other novel feature is the system of bonuses which the people have adopted and sanctioned.

The financial programme is founded on the receipt of bonuses to the extent of $5,000 per mile. $5,000 per mile will represent the amount to be paid for iron and a first mortgage on the road will be given to secure its payment. The proposal to confine the expenditure to $15,000 per mile rests mainly on the division of the work into very small contracts, economy in the purchase of the right of way, checking commissions on the purchase of iron, the construction of timber bridges with stone abutments, the possession of plain and efficient rolling stock, the erection of stations inexpensive and simple, and the obtaining of nothing on credit but the iron.

The object which Toronto has at heart, and which is worth every legitimate effort she can put forth, is to attract to herself a perpetuity of the traffic of the districts which these lines are designed to serve and in a secondary sense, to do this with the least possible burden to herself. To meet these conditions she should see that the location is made so as to command new traffic throughout (or as nearly as possible throughout) the entire length of new construction. It is not her interest or her object to compete with lines already doing her business and promoting her trade ; it is her object to get new trade and new customers by connecting herself with new districts. To intrude competition upon lines already engaged in her trade is to divert her strength and means to less profitable purposes. It is, moreover, certain that new enterprises demanding large investments are much more easily and quickly handled if backed, rather than opposed, by existing and powerful interests. The Hamilton people in seeking the support of the Great Western Railway have illustrated this principle, indeed, without such aid, it is probable they could scarcely move at all. For the benefit of all interested in the success of these roads, we advise a careful consideration of this view of the case. It is said that both roads will come direct into Toronto. If it is essential to their independence that it should be so, the proposal is quite legitimate. But two railways may use one track just as freely as two stages can traverse one road, and to multiply railways with a mere view to independence is simply a fallacy and extravagance. The first 25 miles of a railway out of a city, as is well known, are unproductive of local traffic and the multiplication of such unproductive mileage is a palpable folly, unless it is absolutely unavoidable—more especially so when we have to pay out of our own pockets for the gratification of the propensity. It is peculiar to the schemes about to be subsidized that no professional guidance has been appealed to in placing them before us in detail. We want to know, and we suppose every tax-payer would like to know if twenty-five or thirty miles of the most unproductive and difficult portions of these roads might be saved by adopting King as a common point of departure, utilizing the Northern Railway to that extent under the security of Parliamentary enactment, giving independent running power on an equitable payment or toll for the privilege. It is asserted that such a saving in mileage would be more than equivalent to the whole contribution that Toronto is invited to make, and the companies in such case would be enabled either to use the subsidy in constructing that twenty-five or thirty miles into absolutely new territory (in Bruce or Victoria) or at any rate so as to strengthen their financial position as by such a saving of length they would be enabled to make the construction of their lines a positive and immediate certainty. To our minds twenty-five or thirty miles additional of railway in Bruce and Victoria would be vastly more profitable in new trade to this city than the like length in the townships of York, Peel, and Ontario, which are now in as complete connection with this City, as is possible. If we have money to give we, at least, have none to waste; and while we should exercise a wise liberality towards legitimate enterprises promoted in our interest, we should be jealous to see that it is applied to the best purpose and with a certainty of the best returns of which it capable. It can be of little advantage Toronto to put a fourth railway through t townships of York and Peel. To do it necessarily or under the mere influence hostility to the three existing lines is a thr less and unprofitable appropriation of mo which, at the least, will represent a seri burden upon our resources, and which applied in new districts as yet beyond reach would ensure us an earlier and la compensation for our efforts. Whatever ultimate decision may be on the points have raised, no one will venture to say they are not worthy of every attention.

Leaving this part of the subject, howe to the criticism of experts and conten ourselves with simply directing public at tion to its importance, it becomes our sp duty to look somewhat more closely int financial operations arising out of these enterprises. It is proposed that Tor shall issue debentures in aid of these railw amounting in the aggregate to $400. Assuming that the city can do this wit over-weighting its resources and assu also that it may be done with legal there can, we fancy, be no question as t advantage and propriety of the measure. are all agreed on the immense benefits would accrue from the construction o projected railways. Though unanimity vail on that point, it is the duty as w the interest of every citizen to examin and understand the financial position o city before agreeing to assume furthe dens. Truth will out, and it is bet should out at the beginning than be d out at the end to our discomfiture.

The debt of Toronto, on the 1st of Ja 1868, as returned by the Chamberlai $2,114,853 44. To meet the liability that debt and to provide for current ex an annual income is necessary to the a of $404,500, in addition to receipts fro sources, to raise which, the assesse perty being $24,614,060, would di gross rate of 1¾ cents in the dollar, moderate allowance for probable lo made. By law it is rendered obliga the city to levy rates in each year su for the payment of all accruing inter (by a sinking fund) for the ultimate r tion of the debt at maturity. Dur past six or seven years a considerable of the City's liabilities has been po and the sinking fund is said to have default from $320,000 to $400,000. city was able to pay and yet did n faith has been broken with the city's c If there was absolute inability, ho city going to face its creditors wit burden voluntarily assumed. We l fore us as a statement of the Sinki

nt, but it only gives one side of the ae-
, and does not show the amount accrued
nder the by-laws. During the past four
e years there has been an annual sus-
on in the Sinking Fund. If, then, it be
that this default exists, the city should,
e it issues new debentures, measure its
gth and see that it does not involve
in new engagements entirely beyond

say this is not to make any declaration
e to the enterprises which we all are
g to aid, and which we all desire to see
ed. On the contrary it is friendly to
interests, for if they ask for bread it is
mockery to give them a stone. The
ature has sought to make us honest in
of ourselves, and to enforce a limit to
xpenditure of municipalities by an en-
nt prohibitory of the issue of new
tures when the annual rate that the
il shall levy in any year exceeds two
in the dollar. Would the rate exceed
nts in the dollar if the Council levied
nount which it is legally bound, and
be compelled to levy this year? The
t rate in Toronto is 1½ cents in the
which produces less than $370,000.
city were compelled to raise $125,000
nal, it would require a rate in excess
to cents in the dollar. The Sinking
arrears, as we have seen, amount to
than $300,000. Such being the case,
s no doubt that holders of debentures
under by-laws which provide for the
n of a sinking fund by a special annual
or paying the principal of the deben-
would be entitled to an injunction in
ry to restrain the city from issuing
rther debentures until all arrears of
king fund are made up. Not only so,
h debenture holders have the right to
the Corporation to assess and levy
sufficient to cover the portions of the
fund not provided for in former
If the city be in such a position that
n excess of two cents in the dollar of
ual value of the whole rateable pro-
e necessary to provide for all engage-
a debenture-holder or a rate-payer
in equity, restrain the issue of new
ures. It does not require great legal
to understand why it should be so.
iew is a correct one, the promoters of
nterprises should look to it that they
eceived, and our city Council should
e that they do not involve themselves
le. If we are mistaken we shall be
glad to be convinced that such is the
we know of nothing more likely to
Toronto, and the back country than
ess of the two railways under con-
sideration. The promoters are entitled to the thanks of the community for the energy and perseverance they have displayed in bringing their schemes to maturity. But it is worse than folly for any well-wisher of the enterprises to disguise from himself the real state of affairs.

THE NEW YORK LIFE INSURANCE COMPANY.

There is something wonderful in the increase of Life Assurance business on this Continent during the past few years. In 1862 the total amount of policies in force, of companies doing business in the State of New York, was $183,962,577. In 1867, the total was $1,161,729,776, being more than five times the former amount, and still the work goes bravely on.

In our advertising columns appears the annual statement of the Company whose name stands at the head of this article, for 1867. During the period now mentioned the amount of its policies in force increased from $22,293,864 to $69,406,477, more than threefold in five years; in the same time its annual premiums increased from $759,567 to $3,104,051, or upward of four times, and what is even more satisfactory, as it evidences the increased safety of the concern, is the augmentation of its assets during that period from $2,592,633 to $9,159,753, or nearly fourfold, being greater than that of the policies in force, so that while in 1862 the ratio of assets to the amount of policies in force was about 11½ per cent, in 1867 it was over 13 per cent. The liabilities at the latter date were $7,517,328, leaving a divisible surplus of $1,642,425. The company is a premium note one, 40 per cent of the premiums being payable by note. Out of the above-mentioned sum of assets, $1,601,615 is held in the shape of premium notes, to which if we add the deferred and unpaid premiums, &c., we get a total of $2,361,852 of unrealized assets, being about 25½ per cent of the whole assets. This is considerably under the average, which for the year 1867, for companies doing business in New York State was over 36 per cent. This is satisfactory, and shows that the company possesses the elements of stability, provided always of course that the assets are invested in reliable securities. On this head we find that a considerable proportion are like those of all American companies invested in United States Bonds and Treasury Notes, probably as safe a security as could be selected.

This company is a purely mutual one, so that as in all companies of that description, the whole of the profits made go to the insured. Since starting about 20 years ago, the company has paid in this way dividends amounting in 1867 to about $1,400,000. The New York Life, we believe, claims as an additional fact to its credit, that it was the first which adopted the principle of the ten year non-forfeiture plan, the general adoption of which, as a matter of common justice to policy-holders, we have strenuously urged in these columns, and shall continue to urge as opportunity occurs. This is a step in the right direction, that of non-forfeiture. We do not doubt but that much of its popularity is attributable to this fact, thus affording an inducement to other companies to follow its example in this respect.

A NEW EXPRESS COMPANY.

If the commercial community of Canada have a grievance which galls them more harshly than any other, it is found in their enforced slavery to the present express monopoly. Incivility and exorbitant charges go hand in hand, and certainly if half of what we hear be true, it is time that a remedy were found for the evils complained of. Merchant after merchant has assured us that the charges of this monopoly are simply outrageous, and the impudence of its understrappers intolerable. It is the old story over again. Monopoly has got fat and kicked. That the profits must be enormous we are convinced. Before the establishment of the Merchant's Union of New York the stock of the other combination was not to be had at any price. The nominal quotations ranged from 250 to 400. The profits of the Canadian Express carrying trade have all gone to swell the dividends of foreign companies, and it is not their fault if the Canadian branch of their business has not yielded handsome returns. An opportunity is now afforded to secure relief from a grevious burden by an union among merchants for the establishment of a Canadian Company, having Canadian interests to serve. If our merchants will only take the matter in hand themselves the remedy is within easy reach. The prospectus of the new company, (whose provisional directors are excellent men) states that the terms of subscription are that no payment on account of stock shall be required until after $250,000 shall have been subscribed. This is a guarantee of a useful character. A provision in the charter takes away all power to sell out to any other company or to amalgamate. All this looks like business, and we wish the company every success.

THE WESTERN OF ENGLAND.

We learn from a circular issued by the Agent of this Insurance Company, that the Company's business was taken over by the

Provincial of Toronto on 30th June last. We are also informed that the Provincial bound itself to satisfy all claims arising in respect of policies of the Western current on 1st July, 1868, and to save harmless the Western from all claims, liability and loss, as well as costs, damages and expenses that arise out of such policies. We suppose that parties in the position of claimants under policies issued by the Western will be settled with by the Provincial. It is gratifying to know that the Western people did not leave their policy-holders in the lurch.

COMMERCIAL BANK OF NEW BRUNSWICK.

On the 10th instant, this Bank suspended specie payments. An uneasy feeling has prevailed for some time past respecting its circumstances, and the action of its shareholders in getting rid of stock has, doubtless, contributed greatly to the present result. On the 8th, three lots were sold at $16, $17 and $18, respectively ; their par value being $100. It is generally conceded that the Bank's circulation, about $200,891, is perfectly secure, as the charter provides not only for a treble liability, but also for the continuance of that liability for a year after the shares are parted with. The paid up capital is $600,000.

The Toronto *Leader* and the Ottawa *Times* have made this suspension yield the deduction that "the Government should now step in and take out of the hands of the Banks their power to issue notes." A letter has appeared in the *Leader* in reply to the remarks of that journal, on the desirableness of the circulation of the country being in the hands of the Government. The writer, after showing that the circulation of the Commercial Bank was not large in proportion to its capital, that a Government issue would lead to a depreciated currency, that nearly every Government currency throughout the world is at a discount, that a Government issue would lead to the severest curtailment of discounts that has been known, points out the consequent crippling of commerce, and that the notes of the only bank which has not paid its creditors in Canada are worth nearly as much at this moment as those of the United States.

— The formation of a Joint Stock Company, called the Elgin Manufacturing Company, is announced in the St. Thomas (Ontario) papers, with a capital of $50,000, divided into 2,000 shares of $25 each, for the purpose of manufacturing Agricultural Implements in that town. Thos. Arkell is President.

Owen Sound Harbor.—The *Advertiser* says—The propellor *Acadia*, with 200 tons of merchandise for this port, was unable to go up the river, because of the low water. She remained all day Monday at the new Wharf of the North West Forwarding Company, where she would have been glad to have discharged her freight had the wharf been ready for its accommodation.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Nov. 17, 1868.

During the past week the weather has been cold and our streets are thinly covered with snow.

We have now four steamships in the harbour—the *St. David*, with a large cargo now discharging; the *St. George*, loading for Glasgow ; the *Nova Scotian*, for Liverpool, and the *Cleopatra*, for London. All these vessels are chartered and busily engaged taking in their return cargoes of produce.

The *St. George* brought out a large quantity of malt from Glasgow, this being a more favorable market than either the Scotch or English ones. Hops on the contrary are dull of sale, and there are several hundreds of bales offering for which no price is obtainable. As the bulk of hops sold here are received from the west, this information may be of value to intending shippers. Our full fleet of sailing vessels have now nearly gone, and our wharves are getting deserted except by steamers and small lower port craft, which generally remain to peddle out their cargoes, till they are forced to take winter quarters at Boucherville or Three Rivers. It would seem that nothing can teach the captains of the small coasting craft the value of time. To my knowledge they are constantly offered a fair lump sum for their cargoes, but prefer dealing it out in a few barrels, and not only losing time, but running the risk of being detained all winter.

Produce Market.—The tendency of flour has been downwards. In the beginning of the week holders were very stiff, but the accumulation of stocks and the falling off in shipments forced them to give way. Supers have consequently declined from $5.30 to $5.15 ; for strong lots of [illegible]er's flour, $5.30 to $5.35 is the price. The receipts from 1st January to the 13th inst. are:

1867.	1868.	Increase.
611,835 brls.	649,606 brls.	37,771 brls.

Shipments for same date :

1867.	1868.	Increase.
455,015 brls.	460,068 brls.	4,994 brls.

The stock of flour in store and in the hands of millers, on the 16th, was 31,515 brls. ; on the 2nd, 22,107 brls. ; on the 15th Nov. last year 52,330 brls.

In wheat, the market has fluctuated, the supply from the west having been more attracted to the eastern American shipping ports than here ; New York and Boston dealers have offered rates that we could not afford, and consequently the trade has gone past us. I believe that this will be to the benefit of Montreal, as I feel convinced that heavy losses will result in all grain shipments this year. I have steadily expressed my opinion on this subject, and now find it sustained by the leading journals of New York and Great Britain.

The stock of wheat on the 16th was 114,160 bush., and 179,704 bush. last year.

In coarse grains there is a fair business doing. Cargo sales of peas have been made at $1.04½ per 66 lbs. Corn at 83½c to 84c. Barley rules high, and is likely to advance, bright samples bringing up to $1.37½. Oats have sold up to 48c and 49c per 32 lbs, according to sample. *Provisions*—Pork is very dull, the supply of both live and dressed hogs is greatly in excess of the demand, consequently prices are down, and any large lots are hard of sale. Dressed hogs are worth $6.75 to $7.25 ; mess pork $23.75 to $24, other qualities in proportion. Butter continues very high, and for reasons stated in my former letters is likely to continue so. Best dairy is very scarce and would bring readily 24c to 24½c ; shipping parcels 20½ to 21½, and good western 22c to 23c.

Groceries.—I mentioned in my last that some late fall sales were to come off this week. A. Urquhart & Co. was the first ; the attendance was below an average, only some few Western buyers being present, and they not being anxious to purchase. I do not think that the other sales will meet with more success, except that of Terrance's of teas, as there is no doubt that both sections of the Province is low in stock, especially the finer qualities, and at present Montreal is the cheapest market. For fish the competition has been active, and at Shipway's sales on the wharf yesterday and to-day, over six thousand barrels herrings were placed at $5½ to $5¾ for good to Labrador, and $3½ for round herrings. Holders have advanced their prices, and in view of the short stocks and active demand, they will most likely carry their point.

Hardware.—The fall shipments having arrived and being much reduced by sales, made in anticipation of them, we can safely look for a better business, and at more satisfactory prices. Orders are coming in freely, and buyers are anxious to get them promptly executed, as the close of the inland navigation is rapidly drawing to an end. The advices from England also indicate considerable activity and an advancing market, so that the tone of our market is much firmer.

Dry Goods are exceedingly dull, the trade for the present being over; there is generally a revival when sleighing fairly sets in. So far I am glad to say that remittances have been better than usual, and the trade taken altogether is in a healthy condition.

Toronto Market.

During the week the weather was unseasonably wet, and therefore unfavorable for business. The country roads are almost impassable in many places.

Grain.—*Wheat*—Receipts by cars 15,000 bush. and 20,773 bush. Very little of the new crop has been marketed yet so that millers have only had scant supplies. This fact has also limited the supply of flour, causing that article to be comparatively scarce. With a view of meeting the wants of millers between now and the commencement of sleighing, one of our city dealers is bringing in a cargo of Western wheat which is now officially to arrive. This wheat can, we believe, be laid down here so as to sell for less than $1.00, and leave a fair profit. In the present state of the Chicago market, buyers can operate to good advantage, as there seems to be little faith in the future of wheat, and besides the tightness of the money market renders holding a difficult and costly operation. We hear that the millers of Hamilton, Rochester, and other points on the Erie Canal have not laid in their usual supplies of wheat for the fall grinding, owing to the state of the Chicago market. This fact may shortly give rise to an improvement in our wheat trade. Spring wheat at $1.00 and $1.05 ; no sales. Midge procurable to 1.08. Fall sold to some extent at prices ranging from $1.03 to 1.18, according to quality. *Barley*—Receipts by cars 6,000 bush. and 5,034 bush. last week. The shipments last week ended with Saturday last, were 32,000 bush. and 20,720 bush. the previous week. The shipments by water since the opening of navigation 648,440 bush., as per Custom's returns. There is a fair demand for good samples at $1.23 to $1.25, sales of a few cars at these prices. Peas—Receipts by cars 350 bush. and 2,400 bush. last week. The market nominal, no sales. *Oats*—Receipts by cars 3,000 bush. and 6,000 bush. last week. No transactions, held at 51c to 52c. *Rye*—lower at 75c.

Flour.—Receipts 1,500 brls., and 2,000 brls. last week. Superfine is offered sparingly at $4.80, with little demand; sales of small lots at $4.75. Extra sold at $5.50.

Provisions.—*Butter*.—A lot of 25 tubs sold at 23¼c here, and a lot of 115 packages at point some distance out of the city at 22½c by cars. Rolls in boxes sell at 23 to 24c. Dairy is offered at 11½c by the car load. *Mess Pork*—100 brls. new, sold at $23.50. *Dressed Hogs*—Little doing, at quotations. *Eggs*—very

Live Stock.—Two or three lots of live hogs sold at 5½c.; a great quantity of our packers' supplies are now brought in from Chicago. In cattle and sheep the usual local trade is doing, at unchanged prices.

Hops.—Lower and dull of sale; 15 bales prime sold at 11½c., and a small lot, fair, at 7c.

Freights.—Rates by steamer to Montreal on flour 30c; on wheat, 8c; barley to Oswego, 3½., to Erie 4c; Lumber to Oswego, $1.75 per M feet; Canal, Erie to Toronto, $1.30 to $1.35 currency. Rates per Grand Trunk—Flour to Montreal, 35c; Salted meats to Liverpool per gross ton 67s. 6d; Cheese and butter 77s.; Beef per ton 11s.; pork per ton 9s.

Halifax Market.

Breadstuffs.—Nov. 10.—Flour still continues in good demand without change in price. Canada No. 1 ranges from $6.25 to $6.50; strong bakers, $6.65 to $6.70; extra Canada, $7.50 to $8; extra State still continues dull at $6 to $6.40, according to quality. No. 2 in good demand at $5 to $5.50. Cornmeal without change at $4.50 for kild dried, and $4.40 for fresh ground. Oatmeal $7.70 to $7.80. Imports from January 1st to October 27th, 1867 and 1868:

	Brls. Flour.	Brls. Cornmeal.
1868.	155,008	42,919
1867.	169,191	32,316

Fish.—The weather the past week has operated against transactions in dry Codfish. Prices remain without change at $4.15 to $4.25 for good large shore; $3.20 to $3.30 for for good small shore; Labrador $2.25 to $2.50; Bank and Bay none. Good hard cure Arichat Haddock $2 to $2.10; Eastern Shore $1.80 to $1.90; Western $1.60 to $1.65; Pollock $1.50. Herring in good demand at $4.50 to 5 for Labrador, and $4.25 to 4.50 for shore. Mackerel scarce at $12.50 to 12.75 for No. 1; $11 for No. 2, and $6.75 to 7 for No. 3. Salmon $14 to 15 for No. 1; $12 to 13 for No. 2, and $9.50 to 10 for No. 3.

Furs and Skins.

Of Sea Otter there are two kinds—the Siberian and Alaskan. The difference between them is that the Siberian is more downy, bushy and thick, and also of a dark brown, almost black color interlaced with grey hair, which gives it a silvery appearance; whereas the Otter from Alaska is not so thick and of a lighter shade, giving it the yellow or cloudy color. The difference of the color, however, is frequently disguised by dyeing, and when the silvery hair is counterfeited by false light fur hair, inserted through it by means of a needle. If so tampered with, it requires a very experienced eye to detect an Alaskan Sea Otter from a Siberian. The price in this market, of the former, ranges from $30 to $40, whereas the latter ranges from $200 to $250, according to quality. Russia presents the best market for the Sea Otter, where good skins are scarce, and the demand being very great, they sometimes fetch enormous prices. Fur Seals—The Russian American Company killed in 1867, on the whole territory, 127,000 of these animals, whereas the different American Companies have already killed 164,000 up to this date. After the Fur Seals are killed, the skins are either tied or salted. The dried skins are considered inferior; saleable at $1.50 each. The salted skins being softer and better adapted for cleaning and dressing, the salt, keeping the natural grease of the skin from evaporation, command $3 a skin. The highest price paid this year in the Alaska territory for Seals was 25 cents each. Ermines—The Alaska is not very white, and is inferior to Siberian, and as there is a good demand for it in this country, the best kinds are imported from Russia. As far as can be ascertained, the value of all Skins and Furs exported from Alaska in 1868 amounts to $1,000,000. The quotations which follow are much below those recently ruling here for reason of heavy importations from the North, but all of which, by the way, are entered at our Custom House, but are recently sold in the open market. List of prices of Furs in San Francisco at date: Bear, Black, Prime, Fine $3 to $5 per skin; do. Heavy, $1 to $2.50; do. Seconds, $1 to $2; do. Cubs, 50c to $1.50; do. Brown and Grizzly, about 20 per cent. less than black. Badger 50c to $1 per skin. Fisher, Prime, Dark, $2 to $3; do. Pale, $1 to $2; do. Seconds, 50c to $1 per skin. Fox—Silver, $2 to $15; do. Cross, $2 to $3; do. Red, 50c to $1; do. Kitt 20c to 30c; do. White, 50c to $1; do. Gray 50c to 60c. Lynx, $1 to $1.50. Marten, Prime Dark, $2 to $4; do. Pale, $1 to 2; do. Seconds, $1 to 1.50; do. Thirds, 25c to 75c. Mink—Dark, Northern, Prime, $1.50 to $2.25; do. Seconds, 50c to 75c; do. Thirds, 20c to 25c per skin. Muskrats 10c to 15c. Otter— Sea, Prime, Dark, Silvery, $50 to 60; do. Prime, $20 to 30; do Brown, $15 to 20; do. Pups, 50c to $3. Otter—Land, Prime, Dark, Northern, $1 to 2; do. Southern, 75c to $1,50; do. Seconds, 50c to $1; do. Thirds, 20c to 50c. Raccoon, 20c to 25c. Wolf large, $2 to 3; do. Small, $1 to 50; do. Seconds, 50c to 75c. Wolverine—Firsts, $3 to 4; do. Seconds, $2 to 2.50. Wild Cat—First 30c to 40c; do. Seconds, 10c to 20c. Skunks, 10c to 15c. Seal—Fur, $1 to 2.50; do. Hair, 10c to 20c. Beaver—Northern, 50c to $1; do. Southern, 75c to 90c. Deer Skins—Indian Dressed, (Smoked preferred) $1 to 1.25; do. Raw, 20c to 23c; do. Winter, 15c to 18c. Ermine—Alaskan, 5c to 15c; do. Siberian, 25 to 50c.—*San Francisco Com. Herald.*

Reduction in Telegraph Rates.

We are informed that the Montreal Telegraph Company will, from 1st January, send telegrams from Toronto to any point in Ontario, and as far east as Montreal for 25cts. The tariff to more distant points in the Lower Provinces will be correspondingly reduced.

Advertisements.

THE AGRICULTURAL

Mutual Assurance Association of Canada.

Head Office ..... London, Ont.

A purely Farmers' Company. Licensed by the Government of Canada.

Capital, 1st January, 1868 ..... $220,121 25
Cash and Cash Items, over $65,000 00
No. of Policies in force 28,764

THIS Company insures nothing more dangerous than Farm property. Its rates are as low as any well-established Company in the Dominion, and lower than those of a great many. It is largely patronised, and continues to grow in public favor.

For Insurance, apply to any of the Agents, or address the Secretary, London, Ontario.

Directors: H. A. McFaul, James Cavan, James Johnson, N. DeMill, William Delong.—*Treasurer,* David Barker *Secretary,* John Twigg; *Solicitor,* R. J. Fitzgerald.

THIS Company is established upon strictly Mutual principles, insuring farming and isolated property, (not hazardous,) *in Townships only,* and offers great advantages to insurers, at low rates for *five years,* without the expense of renewal. This Company has existed 12 years, during which period it has adjusted all losses in a satisfactory manner. It is managed with strict economy, and affords an opportunity of insuring with safety and reliance, and with little expense, which accounts for its long standing and the successful business which it has been and is now doing.
